

1. Tap Settings

2. Tap Automation

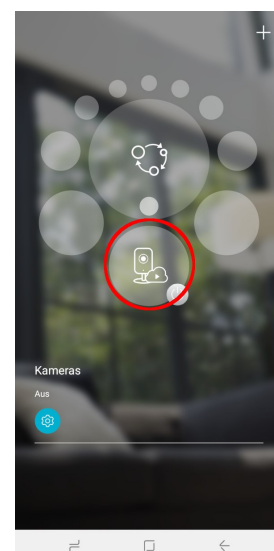

3. Add an automation by tapping on the plus sign.

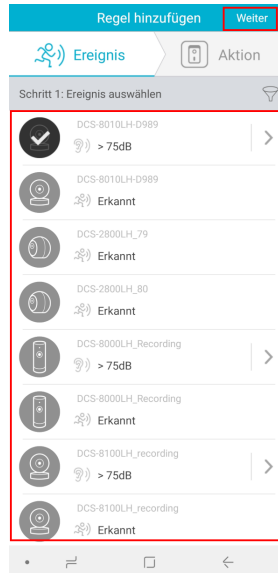

4. If you tap "Automation 1", you can name the automation

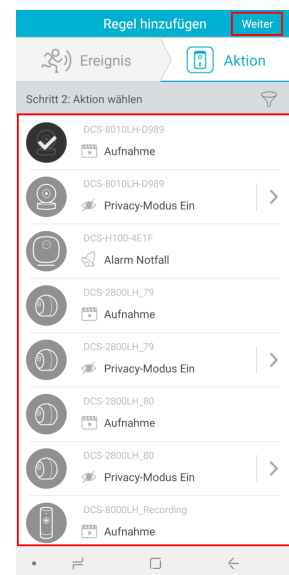

5. To add rules tap the plus button in the bottom right corner of the screen.

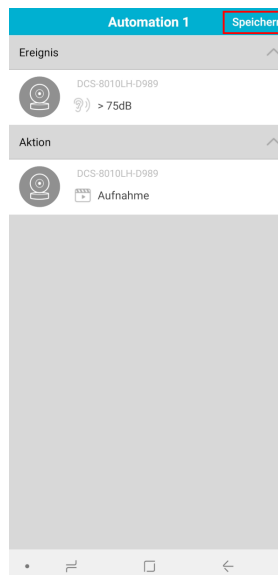

6. Select an event to which you want to respond and tap "Next" at the top.

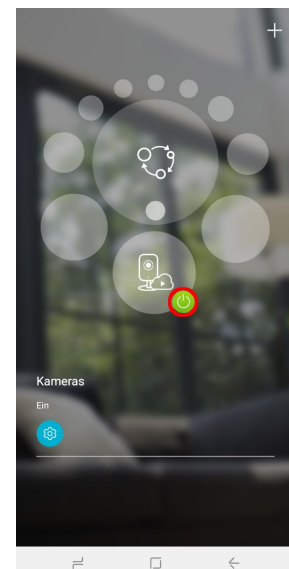

7. Then select an action to follow the event and tap "Next" again.

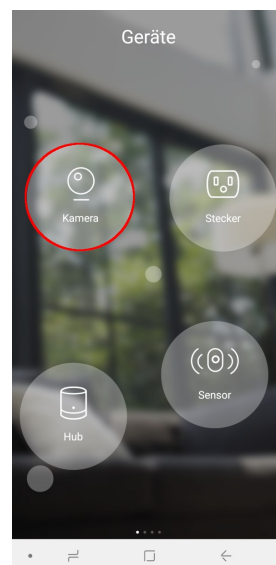

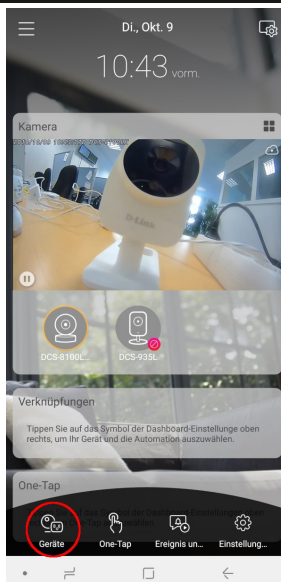

8. Save automation by pressing "Save".

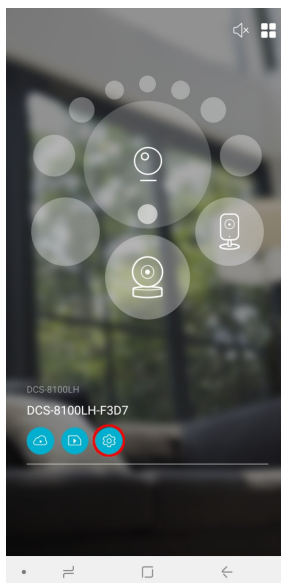

9. Tap on the automation so that the automation becomes active. Automation is active when the power icon has a green background.

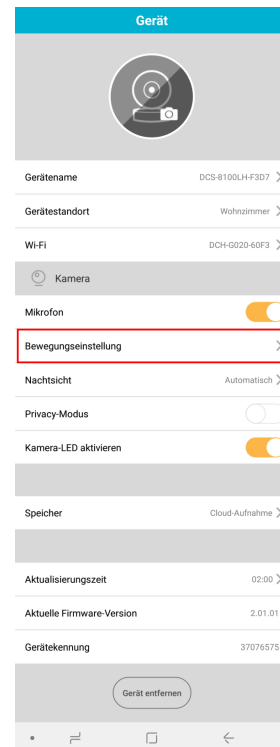

10. Go to the Device menu and then, in this example, go to Cameras.

11. Select the gear of the device for which you have set up the automation.

In this menu you can check the settings of the device. Check whether the microphone is turned on when you have set automations after sound events or the accuracy of motion detection settings.
