### FCC Warning

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this user's guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

### CE Mark Warning

This is a Class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

### Warnung!

Dies ist ein Produkt der Klasse A. Im Wohnbereich kann dieses Produkt Funkstoerungen verursachen. In diesem Fall kann vom Benutzer verlangt werden, angemessene Massnahmen zu ergreifen.

### Precaución!

Este es un producto de Clase A. En un entorno doméstico, puede causar interferencias de radio, en cuyo case, puede requerirse al usuario para que adopte las medidas adecuadas.

### Attention!

Ceci est un produit de classe A. Dans un environnement domestique, ce produit pourrait causer des interférences radio, auquel cas l'utilisateur devrait prendre les mesures adéquates.

### Attenzione!

Il presente prodotto appartiene alla classe A. Se utilizzato in ambiente domestico il prodotto può causare interferenze radio, nel cui caso è possibile che l'utente debba assumere provvedimenti adeguati.

### VCCI Warning

この装置は、クラスA情報技術装置です。この装置を家庭環境で使用 すると電波妨害を引き起こすことがあります。この場合には使用者が適切 な対策を講ずるよう要求されることがあります。

# 1. Introduction

This manual's command descriptions are based on the software release 2.00. The commands listed here are the subset of commands that are supported by the DGS-1100 MP/MPP Series switch.

## Audience

This reference manual is intended for network administrators and other IT networking professionals responsible for managing the switch by using the Web User Interface (Web UI). The Web UI is the secondary management interface to the DGS-1100 MP/MPP Series switch, which will be generally be referred to simply as 'the switch' within this manual. This manual is written in a way that assumes that you already have the experience and knowledge of Ethernet and modern networking principles for Local Area Networks.

## **Standard Mode and Surveillance Mode**

The DGS-1100 MP/MPP series switches support Standard Mode and Surveillance Mode Web UI types. Standard Mode is used to manage the network and system elements of the switch. Surveillance Mode is a dedicated user interface designed for monitoring and managing the surveillance and IP security devices on your network.

To switch between the two types of interfaces, you can re-run the Smart Wizard that is presented when you access the web interface of the device. For more information, please refer to the Web UI Reference Guide for the appropriate mode.

## **Other Documentation**

The documents below are a further source of information in regards to configuring and troubleshooting the switch. All the documents are available either from the CD, bundled with this switch, or from the D-Link website. Other documents related to this switch are:

- D-Link DGS-1100 MP/MPP Series Standard Mode Web UI Reference Guide
- D-Link DGS-1100 MP/MPP Series Surveillance Mode Web UI Reference Guide

## Conventions

| Convention                 | Description  |
|----------------------------|--|
| Boldface Font              | Indicates a button, a toolbar icon, menu, or menu item. For example:<br>Open the <b>File</b> menu and choose <b>Cancel</b> . Used for emphasis. May<br>also indicate system messages or prompts appearing on screen.<br>For example: <b>You have mail</b> . Bold font is also used to represent<br>filenames, program names and commands. For example: use the<br><b>copy</b> command. |
| Initial capital letter     | Indicates a window name. Names of keys on the keyboard have initial capitals. For example: Press Enter.  |
| Menu Name > Menu<br>Option | Indicates the menu structure. <b>Device &gt; Port &gt; Port Properties</b><br>means the <b>Port Properties</b> menu option under the <b>Port</b> menu<br>option that is located under the <b>Device</b> menu.  |
| Blue Courier Font          | This convention is used to represent an example of a screen console display including example entries of CLI command input with the corresponding output.  |

## **Notes, Notices, and Cautions**

Below are examples of the three types of indicators used in this manual. When administering your switch using the information in this document, you should pay special attention to these indicators. Each example below provides an explanatory remark regarding each type of indicator.

**NOTE:** A note indicates important information that helps you make better use of your device.

**NOTICE:** A notice indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**CAUTION:** A caution indicates a potential for property damage, personal injury, or death.

# 2. Product Introduction

The DGS-1100 MP/MPP series Smart Switch is the world's first PoE switch with ONVIF support. This allows it to recognize ONVIF devices and integrate seamlessly with your surveillance network. Various power budgets, support for high powered PoE standards (MPP series) make the DGS-1100 MP/MPP series a critical part of your surveillance infrastructure.

The DGS-1100 MP/MPP series switches can change modes between 'Smart Switch' and 'Surveillance Switch' modes, making them suitable for a variety of applications. An intuitive web user interface makes advanced features available in the Standard Mode, with full PoE capabilities and high link speeds improving deployment times for PoE devices.

The switches are designed to be energy efficient with support for IEEE 802.3az Energy Efficient Ethernet (EEE) and D-Link Green Technologies. They include multiple features, such as cable length detection, port status detection and the ability to hibernate under low utilization. If the switch detects no activity on any of the switch ports, it can be hibernated to conserve power.

The DGS-1100 MPP series provides multiple PoE ports that support IEEE 802.3bt, allowing the latest high-powered PoE devices to be used with the switch. Automatic device identification, video traffic optimization and health diagnostic tools provide an intelligent solution to your enterprise network requirements.

## DGS-1100-10MP

8-Port 10/100/1000Mbps + 2-Port SFP 1000Mbps PoE switch

### **Front Panel**

Figure 2-1 DGS-1100-10MP Front Panel

**Power LED:** The Power LED lights up when the switch is connected to a power source.

### Link/Act/Speed LED (Ports 1-8):

Solid Green: When there is a secure 1000Mbps connection at the port.

Blinking Green or Amber: Indicates that the switch is either sending or receiving data to the port.

Solid Amber: Indicates that the port is running at 10/100Mbps.

Light off: No link.

### PoE Mode (Ports 1- 8):

Green: Indicates that PoE Mode is active.

Amber: Indicates that there is an issue with the PoE mode activating properly.

Light off: Indicates that PoE mode is not active.

#### Link/Act/Speed LED (Ports 9-10):

Solid Green: There is a secure 1000Mbps connection at the port.

Blinking Green: There is reception or transmission occurring at the port.

Light off: No link.

#### **LED Mode Button:**

By pressing the Mode button over 2 seconds, the Port LED will switch between Link/PoE modes.

**Reset:** By pressing the Reset button until the power LED turns amber, the switch will change back to the default configuration and all changes will be lost.

### **Rear Panel**

#### Figure 2-2 DGS-1100-10MP Rear Panel

**Power:** Connect the supplied AC power cable to this port.

**CAUTION:** The SFP ports should use UL listed Optical Transceiver product, Rated Laser Class I. 3.3Vdc.

**CAUTION:** This equipment is to be connected only to PoE networks without routing to the outside plant.

## DGS-1100-10MPP

**Power LED:** The Power LED lights up when the switch is connected to a power source.

### Link/Act/Speed LED (Ports 1-8):

Solid Green: When there is a secure 1000Mbps connection at the port.

Blinking Green or Amber: Indicates that the switch is either sending or receiving data to the port.

Solid Amber: Indicates that the port is running at 10/100Mbps.

Light off: No link.

### PoE Mode (Ports 1- 8):

Solid Green: Indicates that PoE Mode is active.

Blinking Green: When power feeding IEEE 802.3bt PD devices (90W per port), only apply to port 7 and 8.

Solid Amber: Indicates that there is an issue with the PoE mode activating properly.

Light off: Indicates that PoE mode is not active.

### Link/Act/Speed LED (Ports 9-10):

Solid Green: There is a secure 1000Mbps connection at the port.

Blinking Green: There is reception or transmission occurring at the port.

Light off: No link.

### LED Mode Button:

By pressing the Mode button over 2 seconds, the Port LED will switch between Link/PoE modes.

**Reset:** By pressing the Reset button until the power LED turns amber, the switch will change back to the default configuration and all changes will be lost.

### **Rear Panel**

Figure 2-4 DGS-1100-10MPP Rear Panel

**Power:** Connect the supplied AC power cable to this port.

**CAUTION:** The SFP ports should use UL listed Optical Transceiver product, Rated Laser Class I. 3.3Vdc.

**CAUTION:** This equipment is to be connected only to PoE networks without routing to the outside plant.

## DGS-1100-26MP

24-Port 10/100/1000Mbps + 2-Port Combo 1000BASE-T/SFP PoE switch

**CAUTION:** This equipment is to be connected only to PoE networks without routing to the outside plant.

# 3. Hardware Installation

This chapter provides unpacking and installation information for the D-Link switch.

## **Step1: Unpacking**

Open the shipping carton and carefully unpack its contents. Please consult the packing list located below to make sure all items are present and undamaged. If any item is missing or damaged, please contact your local D-Link reseller for a replacement.

### **Packing Contents**

- One D-Link DGS-1100 MP/MPP Series switch
- One AC power cord
- Four rubber feet
- Screws and two mounting brackets
- One accessory kit for a ground screw
- One Multi-lingual Getting Started Guide
- One CD with User Manual

## **Step2: Switch Installation**

For safe switch installation and operation, it is recommended that you:

- Visually inspect the power cord to see that it is secured fully to the AC power connector.
- Make sure that there is proper heat dissipation and adequate ventilation around the switch.
- Do not place heavy objects on the switch.

### **Desktop or Shelf Installation**

When installing the switch on a desktop or shelf, the rubber feet included with the device must be attached on the bottom at each corner of the device's base. Allow enough ventilation space between the device and the objects around it.

Figure 3-1 Attach the adhesive rubber pads to the bottom

### **Rack Installation**

The switch can be mounted in an EIA standard size 19-inch rack, which can be placed in a wiring closet with other equipment.

**CAUTION:** Ensure the power cable is disconnected before installing the switch.

To install, attach the mounting brackets to the switch's side panels (one on each side) and secure them with the screws provided.

Figure 3-2 Attach the mounting brackets to the switch

Then, use the screws provided with the equipment rack to mount the switch in the rack.

Figure 3-3 Mount the switch in the rack or chassis

Please be aware of following safety Instructions when installing:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on over current protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).

## **Step 3: Plugging in the AC Power Cord**

Users may now connect the AC power cord into the rear of the switch and to an electrical outlet (preferably one that is grounded and surge protected).

Figure 3-4 Plugging the switch into an outlet

### **Power Failure**

As a precaution, the switch should be unplugged in case of power failure. When power is resumed, the switch should be plugged back in.

### **Grounding the Switch**

This section describes how to connect the DGS-1100 MP/MPP Series switch to ground. You must complete this procedure before powering your switch.

#### **Required Tools and Equipment**

- Ground screws (included in the accessory kit): One M4 x 8 mm (metric) pan-head screw
- Ground cable (not included in the accessory kit): The grounding cable should be sized according to local and national installation requirements. Depending on the power supply and system, a 12 to 6 AWG copper conductor is required for U.S installation. Commercially available 6 AWG wire is recommended. The length of the cable depends on the proximity of the switch to proper grounding facilities.
- A screwdriver (not included in the accessory kit)

Follow these steps to ground the switch:

Step 1: Verify that the switch is not connected to a power supply.

Step 2: Use the ground cable to place the #8 terminal lug ring on top of the ground-screw opening, as seen in the figure below.

Step 3: Insert the ground screw into the ground-screw opening.

Step 4: Using a screwdriver, tighten the ground screw to secure the ground cable to the switch.

Step 5: Attach the terminal lug ring at the other end of the grounding cable to an appropriate grounding stud or bolt on rack where the switch is installed.

Step 6: Verify if the connections at the ground connector on the switch and the rack are securely attached.

Figure 3-5 Ground cable, screw and #8 terminal lug rings

**CAUTION:** This equipment is to be connected only to PoE networks without routing to the outside plant.

# 4. Web-based Switch Configuration

Management Options Connecting using the Web User Interface Logging onto the Web User Interface Smart Wizard Web User Interface (Web UI)

## **Management Options**

The switch provides multiple access platforms that can be used to configure, manage and monitor networking features available on the switch. Currently there are three management platforms available and they are described below.

#### Web-based Management Interface

After successfully installing the switch, the user can configure the switch, monitor the LED panel, and display statistics graphically using a Web browser, such as Microsoft® Internet Explorer, Opera Firefox, Safari, or Google Chrome.

### **SNMP-based Management**

The switch can be managed with an SNMP-compatible console program. The switch supports SNMP version 1.0, and version 2c. The SNMP agent decodes the incoming SNMP messages and responds to requests with MIB objects stored in the database. The SNMP agent updates the MIB objects to generate statistics and counters.

#### **D-Link Network Assistant**

DNA (D-Link Network Assistant) included on the installation CD is a program for discovering DGS-1100 MP/MPP Series switches with the same L2 network segment connected to your PC. This tool can support windows 2000, XP, Vista, and Windows 7.

## **Connecting using the Web User Interface**

Most software functions of the DGS-1100 MP/MPP Series switches can be managed, configured and monitored via the embedded web-based (HTML) interface. Manage the switch from remote stations anywhere on the network through a standard web browser. The web browser acts as a universal access tool and can communicate directly with the switch using the HTTP or HTTPS protocol.

You need the following equipment to begin the web configuration of your device:

- A PC with a RJ-45 Ethernet connection
- A standard Ethernet cable

Figure 4-1 Connecting to a DGS-1100 MP/MPP Series switch

Connect the Ethernet cable to any of the ports on the front panel of the switch and to the Ethernet port on the PC.

## Logging onto the Web User Interface

To access the Web UI, simply open a web browser and enter the switch's default IP address into the address bar. Make sure that the IP address of the management PC is in the same subnet as the IP address of the switch you are trying to connect to.

**NOTE:** The default IP address of the switch is **10.90.90.90**, with a subnet mask of **255.0.00**.

NOTE: The default username is 'admin' and password is 'admin'.

After successfully connecting to the Web UI, the Smart Wizard will be launched.

## **Smart Wizard**

The Smart Wizard is a configuration utility that is launched the first time the Web UI is accessed. It allows users to configure basic settings such as the switch mode, management IP and password. It can also be used to switch between Standard Mode and Surveillance Mode Web UI types.

### Step 1 – Web Mode

The initial page allows the user to choose between Standard Mode and Surveillance Mode on the switch. This can be changed at any time by returning to the Smart Wizard.

For more information on the Surveillance Mode features of the switch, please refer to the Surveillance Mode Web UI Reference Guide.

|   | The wizard will guide yo<br>the setup wizard, pleas<br>Step 1: Choose the we | ou through the ba<br>e click "Exit" to go | back to the main page. | ch. If you do not want to run |

|                              | LAIL             | Dack | INCAL |  |

Figure 4-3 Admin Password

Tick the **Ignore the wizard next time** option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the Next button to accept the changes made and continue to the next step.

### Step 4 – SNMP Settings

In this window, the user can enable or disable the SNMP function.

| SNMP                            |          |      |              |
|---------------------------------|----------|------|--------------|
| SNMP • Enabled                  | Disabled |      |              |
|                                 |          |      |              |
|                                 |          |      |              |
|                                 |          |      |              |
| Ignore the wizard next time     | Exit     | Back | Apply & Save |
| · groto dis fillero fiole dillo | LAR      | Duck | Appi) a sure |
|                                 |          |      |              |

Figure 4-4 SNMP window

The fields that can be configured are described below:

| Parameter | Description  |
|-----------|--|
| SNMP      | Select the <b>Enabled</b> option to enable the SNMP function.<br>Select the <b>Disabled</b> option to disable the SNMP function. |

Tick the Ignore the wizard next time option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the Apply& Save button to accept the changes made, and then continue to the Web UI.

**NOTE:** Standard Mode and Surveillance Mode Web UIs share the same configuration files. Any features enabled in one interface will be made available in the other interface.

**NOTE:** Settings are saved between interface types. It is possible to switch interface types and re-run the Smart Wizard without losing settings saved in one version of the interface.

## Web User Interface (Web UI)

By clicking the **Exit** button in the Smart Wizard, you will enter the Web-based Management interface.

### **Areas of the User Interface**

The figure below shows the user interface. Two distinct areas divide the user interface, as described in the table.

# 6. System

System Information Settings Port Configuration PoE System Log Time Time Profile

## **System Information Settings**

## **System Information**

The user can enter a System Name, System Location, and System Contact to aid in defining the switch.

To view the following window, click **System > System Information Settings > System Information**, as shown below:

| System Information |          |       |
|--------------------|----------|-------|
| System Information |          |       |
| System Name        | D-Link   |       |
| System Location    | 16 chars |       |
| System Contact     | 32 chars | Apply |

#### Figure 6-1 System Information window

The fields that can be configured are described below:

| Parameter       | Description  |
|-----------------|--|
| System Name     | Enter a system name for the switch, if so desired. This name will identify it on the switch network. |
| System Location | Enter the location of the switch, if so desired.   |
| System Contact  | Enter a contact name for the switch, if so desired.  |

Click the Apply button to accept the changes made.

## **IPv4 Interface**

This window is used to configure the IPv4 settings of the switch.

To view the following window, click **System > System Information Settings > IPv4 Interface**, as shown below:

| P Settings                       |                    |    |
|----------------------------------|--------------------|----|
| Get IP From                      | Static •           |    |
| IP Address                       | 10 - 90 - 90 - 90  |    |
| Mask                             | 255 0 0 0 0        |    |
| Gateway                          | 10 - 90 - 90 - 254 |    |
| DHCP Retry Time (5-120)          | 7 times            |    |
| Note: DHCP default retry interva | 5 seconds          | Ap |

Figure 6-2 Peripheral Settings window

The fields that can be configured are described below:

| Parameter              | Description   |
|------------------------|---|
| Get IP From            | Select DHCP to automatically obtain an IP address. Select<br>Static to manually configure the IP address settings. BOOTP<br>allows the switch to get an IP configuration using the BOOTP<br>protocol. |
| IP Address             | If Static is selected, enter the IP address of the switch. If DHCP or BOOTP is selected, the automatically obtained IP address will be displayed.   |
| Mask                   | If Static is selected, enter the IP address of the switch. If DHCP or BOOTP is selected, the automatically obtained network mask will be displayed.   |
| Gateway                | If Static is selected, enter the IP address of the switch. If DHCP or BOOTP is selected, the automatically obtained gateway will be displayed.  |
| DHCP retry Time(5-120) | If DHCP is selected, enter the number of times to retry obtaining an IP address.  |

Click the **Apply** button to accept the changes made.

## **IPv6 Interface**

This window is used to configure the IPv6 settings of the switch.

To view the following window, click **System > System Information Settings > IPv6 Interface**, as shown below:

| Pv6 Interface       |                              |     |       |
|---------------------|------------------------------|-----|-------|
| Local IPv6 Address  | fe80::8226:89ff.fee6:1ae1/64 |     |       |
| IPv6 State          | Enabled v                    |     |       |
| Static IPv6 Address | 2013::1                      | /64 | Apply |

Figure 6-3 Peripheral Settings window

The fields that can be configured are described below:

| Parameter           | Description   |
|---------------------|---|
| IPv6 State          | Select whether to <b>Enable</b> or <b>Disable</b> IPv6 functionality. |
| Static IPv6 Address | If enabled, enter the static IPv6 address of the switch.              |

Click the **Apply** button to accept the changes made.

## **Port Configuration**

### **Port Settings**

This window is used to view and configure the switch's port settings.

To view the following window, click **System > Port Configuration > Port Settings**, as shown below:

| ort Settings  |         |   |         |             | _ |            |    |  |       |
|---------------|---------|---|---------|-------------|---|------------|----|--|-------|
| Port Settings |         |   |         |             |   |            |    |  |       |
| From Port     | To Port |   | State   | MDIX        |   | Flow Contr | ol |  |       |
| eth1 •        | eth1    | • | Enabled | Auto        | ۲ | Off        |    |  |       |
| Duplex        | Speed   |   |         | Description | n |            |    |  |       |
| Auto 🔻        | Auto    |   |         | 8 chars     |   |            |    |  | Apply |

Figure 6-4 Port Settings window

| Parameter           | Description   |
|---------------------|---|
| From Port / To Port | Select the appropriate port range used for the configuration here.  |
| State               | Select this option to <b>enable</b> or <b>disable</b> the physical port here.   |
| MDIX                | Select the Medium Dependent Interface Crossover (MDIX) option here. Options to choose from are <b>Auto</b> , <b>Normal</b> , and <b>Cross</b> .   |
|                     | <b>Auto</b> - Select this option for auto-sensing of the optimal type of cabling.   |
|                     | <b>Normal</b> - Select this option for normal cabling. If this option<br>is selected, the port is in the MDIX mode and can be<br>connected to a PC's NIC using a straight-through cable or a<br>port (in the MDIX mode) on another switch through a cross-<br>over cable.                 |
|                     | <b>Cross</b> - Select this option for cross cabling. If this option is selected, the port is in the MDI mode and can be connected to a port (in the MDIX mode) on another switch through a straight cable.  |
| Flow Control        | Select to either turn flow control <b>On</b> or <b>Off</b> here. Ports configured for full-duplex use 802.3x flow control, half-duplex ports use back-pressure flow control, and Auto ports use an automatic selection of the two.  |
| Duplex              | Select the duplex mode used here. Options to choose from are <b>Auto</b> , <b>Half</b> , and <b>Full</b> .  |
| Speed               | Select the port speed option here. This option will manually force the connected on the selected port to only connect at the speed specified here. Options to choose from are <b>Auto</b> , <b>10M</b> , <b>100M</b> . <b>1000M</b> speed is only available when <b>Auto</b> is selected. |
| Description         | Enter a 8 characters description for the corresponding port   |

The fields that can be configured are described below:

here.

Click the **Apply** button to accept the changes made.

**Note**: The SFP ports on the DGS-1100 MP/MPP series only support **Auto** for duplex and speed. Also, the fiber ports on the DGS-1100 MP/MPP series do not support MDIX.

### **Jumbo Frame**

This window is used to view and configure the Jumbo Frame size and settings. The switch supports jumbo frames. Jumbo frames are Ethernet frames with more than 1,518 bytes of payload. The switch supports jumbo frames with a maximum frame size of up to 10240 bytes.

To view the following window, click **System > Port Configuration > Jumbo Frame**, as shown below:

| umbo Frame                 |                            |       |
|----------------------------|----------------------------|-------|
| Jumbo Frame                | Enabled Disabled           | Apply |
| Note: Maximum frame length | is 10240 bytes if enabled. |       |

Figure 6-5 Jumbo Frame window

The fields that can be configured are described below:

| Parameter   | Description   |
|-------------|---|
| Jumbo Frame | Select whether to <b>Enable</b> or <b>Disable</b> support for Jumbo Frames on the switch. |

Click the Apply button to accept the changes made.

## ΡοΕ

The DGS-1100 MP/MPP Series switches support the IEEE 802.3af and 802.3at Power over Ethernet (PoE) standards. The DGS-1100 MPP Series also support the IEEE 802.3bt standard.

| Switch Model   | Port Numbers | Power Rating |
|----------------|--------------|--------------|
| DGS-1100-10MP  | 1 - 8        | 30W          |
| DGS-1100-10MPP | 1 – 8        | 30W          |
|                | 7 - 8        | 90W          |
| DGS-1100-26MP  | 1 - 24       | 30W          |
| DGS-1100-26MPP | 1 – 24       | 30W          |
|                | 21 - 24      | 90W          |

The ports and power ratings per switch are as follows:

Power can be supplied at 48VDC to Powered Devices (PDs) over Category 5 or Category 3 UTP Ethernet cables. The switches follow the standard PSE (Power Sourcing Equipment) pinout *Alternative A*, where power is sent over pins 1, 2, 3 and 6.

The DGS-1100 MP/MPP Series switches include the following PoE features:

- Auto-discovery recognizes the connection of a PD (Powered Device) and automatically sends power to it.
- The Auto-disable feature occurs under two conditions: firstly, if the total power consumption
  exceeds the system power limit; and secondly, if the per port power consumption exceeds the
  per port power limit.
- Active circuit protection automatically disables the port if there is a short. Other ports will remain active.

Based on 802.3af/at PDs receive power according to the following classification:

| Class | Maximum power used by PD |
|-------|--------------------------|
| 0     | 12.95W                   |
| 1     | 3.84W                    |
| 2     | 6.49W                    |
| 3     | 12.95W                   |
| 4     | 25.5W                    |

PSE provides power according to the following classification:

| Class | Max power supplied by PSE |
|-------|---------------------------|
| 0     | 16.2W                     |
| 1     | 4.2W                      |
| 2     | 7.4W                      |
| 3     | 16.2W                     |
| 4     | 31.6W                     |

### **PoE System**

This window is used to configure the PoE system, and display the detailed power information and PoE Trap parameters for PoE modules.

To view the following window, click **System > PoE > PoE System**, as shown below:

| oE System              |            |               |                     |            |
|------------------------|------------|---------------|---------------------|------------|
| PoE System             |            |               |                     |            |
| Usage Threshold (1-99) | Trap State |               |                     |            |
| 99 %                   | Disabled   |               |                     | Apply      |
| Power Budg             | et (W)     | Delivered (W) | Usage Threshold (%) | Trap State |
|                        |            |               |                     |            |
|                        |            |               |                     |            |
|                        |            |               |                     |            |
|                        |            |               |                     |            |
|                        |            |               |                     |            |

Figure 6-6 PoE System window

The fields that can be configured are described below:

| Parameter       | Description   |
|-----------------|---|
| Usage Threshold | Enter the usage threshold to generate a log and send the corresponding standard notification. |
| Trap State      | Select this option to enable or disable the sending of PoE notifications.                     |

Click the **Apply** button to accept the changes made.

### **PoE Status**

This window displays the PoE status of each port.

To view the following window, click **System > PoE > PoE Status**, as shown below:

| Note:   | Faulty Code: | Class | Max (W) | Used (W) |
|---|--------------|-------|---------|----------|
| eth1  | Searching    | N/A   | 0.0     | 0.0      |
| eth2  | Searching    | N/A   | 0.0     | 0.0      |
| eth3  | Searching    | N/A   | 0.0     | 0.0      |
| eth4  | Searching    | N/A   | 0.0     | 0.0      |
| eth5  | Searching    | N/A   | 0.0     | 0.0      |
| eth6  | Searching    | N/A   | 0.0     | 0.0      |
| eth7  | Searching    | N/A   | 0.0     | 0.0      |
| eth8  | Searching    | N/A   | 0.0     | 0.0      |
| <b>te:</b><br><b>uity Code:</b><br>MPS (Maintain Power Signatur<br>PD short | e) Absent    |       |         |          |
| Overload  |              |       |         |          |
| Power Denied  |              |       |         |          |

Figure 6-7 PoE Status window

**Note**: For the PoE Status table, if the classification was shown as "Legacy PD", it will be classified to non-AF PD or Legacy PD.

## **PoE Configuration**

This window is used to configure the PoE port.

To view the following window, click **System > PoE > PoE Configuration**, as shown below:

| Configurat |   | To Port |   | Priority | State        | 4-Pair State | Legacy                       |   | Power Limit | Max Wattage(1000-32000) |            |
|------------|---|---------|---|----------|--------------|--------------|------------------------------|---|-------------|-------------------------|------------|
| th1        | Ŧ | eth1    | Ŧ | Low      | <br>Disabled | <br>-        | <ul> <li>Disabled</li> </ul> | Ŧ | Auto        | • D                     | milliwatts |

The fields that can be configured are described below:

| Parameter               | Description  |
|-------------------------|--|
| From Port / To Port     | Select the appropriate port range used for the configuration here.   |
| Priority                | Select the priority for provisioning power to the port. Options to choose from are <b>Critical</b> , <b>High</b> and <b>Low</b> .  |
| State                   | Select this option to enable or disable the PoE functionality.<br>Options to choose from are <b>Disabled</b> or <b>Enabled</b> .   |
| 4-Pair State            | This is used to enable 60W PoE or 90W PoE by utilizing all 4 pairs in a standard Ethernet cable. It can also be used to disable this functionality. Options to choose from are <b>Disabled</b> , <b>60W Enabled</b> and <b>90W Enabled</b> .   |
| Legacy                  | Use this to enable or disable PoE support for non-802.3af devices. These will show up in the Legacy column as Disabled or Enabled, depending on which option is chosen. Options to choose from are <b>Disabled</b> or <b>Enabled</b> .   |
| Power Limit             | Select the power management mode for the PoE ports.<br>Options to choose from are <b>Auto, Class 1, Class 2, Class 3,</b><br>and <b>Class 4</b> .  |
| Max Wattage(1000-32000) | When selecting <b>Auto</b> in the <b>Mode</b> drop-down list, this option<br>appears. Tick the check box and enter the maximum wattage<br>of power that can be provisioned to the auto-detected PD. If<br>the value is not entered, the class of the PD automatically<br>determines the maximum wattage which can be provisioned.<br>The valid range for maximum wattage is between 1000 mW<br>and 32000 mW. |
|                         | Note: DGS-1100-10MP/26MP tick the check box,the Max<br>Wattage can choose 6000,11000,20000,32000 on the drop-<br>down menu.  |
| Time Profile            | Select the Time Profile from the drop down list.   |
|                         | <b>Note</b> : The <b>Time Profile</b> drop down menu will only have available options if a time profile has been created.  |

Click the **Delete Time Range** button to clear the setting in the corresponding Time Range field. Click the **Apply** button to accept the changes made. **Note**: The **Max Wattage** option will only be available if the check box next to the input field is enabled. When enabled, the Power Limit drop down menu will not be available.

Note: If the switch failed to supply power to the IEEE 802.3at PD (Powered Device),

- 1. Check if the PD connected to the port supports the IEEE 802.3at standard.
- 2. Manually configure the corresponding port's power limit value to 30 Watts.

**CAUTION:** Before connecting the PD, make sure it supports IEEE802.3bt, as otherwise it will become damaged.

### **PD Alive Configuration**

This window is used to configure the PD Alive function for PDs connected to the PoE ports. The ping function is used to check if PDs, connected to the PoE ports, are active or not. When PDs appear to be inactive, the specified action (Reboot, Notify, or Both) will be taken.

To view the following window, click on the PD Alive Configuration enters the navigation menu:

| Alive Configuration  |                  |               |                   |                       |                   |        |
|----------------------|------------------|---------------|-------------------|-----------------------|-------------------|--------|
| rom Port             | To Port          | P             | D Alive State     | PD IP Address         |                   |        |
| port1 •              | port1            | •             | Enabled 🔹         | 1                     | ]                 |        |
| ool Interval(10-300) | Retry Count(1-5) | v             | /ait Time(30-300) | Action                |                   |        |
|                      |                  |               |                   | Reboot <b>v</b>       |                   | Apply  |
|                      |                  |               |                   |                       |                   |        |
| Port                 | PD Alive State   | PD IP Address | Retry Count(1-5)  | Pool Interval(10-300) | Wait Time(30-300) | Action |
| 1                    | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |

| 3                    | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |
| 4                    | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |
| 5                    | Disable          | 0.0.0         | 2                 | 30                    | 90                | both   |
| 6                    | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |
| 7                    | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |
|                      | Disable          | 0.0.0.0       | 2                 | 30                    | 90                | both   |

Figure 6-9 PD Alive Configuration window

The fields that can be configured are described below:

| Parameter             | Description  |
|-----------------------|--|
| From Port / To Port   | Select the appropriate port range used for the configuration here.   |
| PD Alive State        | Select to enable or disable the PD Alive function on the specified port(s).  |
| PD IP Address         | Enter the IP address of the PD here.   |
| Pool interval(10-300) | Enter the poll interval here. This is the interval between ping messages from the system to PDs connected to the PoE port(s). The range is from 10 to 300 seconds.   |
| Retry Count(1-5)      | Enter the retry count here. This is the amount of ping messages that will be sent (at each interval) when PDs are not responding. The range is from 1 to 5.  |
| Wait Time(30-300)     | Enter the waiting time here. This is how long the system will wait<br>before sending ping messages to the PD connected to the PoE port<br>after a 'Reset' action was taken. The range is from 30 to 300 seconds.   |
| Action                | Select the action that will be taken here. Options to choose from are <b>Reboot</b> , <b>Notify</b> , and <b>Both</b> .<br><b>Reboot</b> - Specifies to reset the PoE port state (turn PoE off and on).<br><b>Notify</b> - Specifies to send logs and traps to notify the administrator.<br><b>Both</b> - Specifies to send logs and traps to notify the administrator and |

to reset the PoE port state (turn PoE off and on).

Click the **Apply** button to accept the changes made.

## **System Log**

### **System Log Settings**

This window is used to view and configure the system's log settings.

To view the following window, click **System > System Log > System Log Settings**, as shown below:

| System Log Settings |           |       |
|---------------------|-----------|-------|
| Global State        |           |       |
| System Log          | Enabled • | Apply |
| Buffer Log Settings |           |       |
| Buffer Log State    | Enabled   | Apply |

#### Figure 6-10 System Log Settings window

The fields that can be configured for **Global State** are described below:

| Parameter  | Description   |
|------------|---|
| System Log | Select this option to enable or disable the System Log functionality. |

Click the Apply button to accept the changes made.

The fields that can be configured for Buffer Log Settings are described below:

| Parameter        | Description   |
|------------------|---|
| Buffer Log State | Select this option to enable or disable the Buffer Log State. |

Click the Apply button to accept the changes made.

### System Log Server Settings

This window is used to view and configure system log's server settings.

To view the following window, click **System > System Log > System Log Server Settings**, as shown below:

| og Server                 |          |                  |       |
|---------------------------|----------|------------------|-------|
| Host IPv4 Address         | Facility | Local 0 🔹        |       |
| UDP Port (514,1024-65535) | Severity | Warning <b>v</b> | Apply |

Figure 6-101 System Log Server Settings window

The fields that can be configured are described below:

| Parameter                | Description  |
|--------------------------|--|
| Host IPv4 Address        | Enter the system log server's IPv4 address here.   |
| UDP Port(514,1024-65535) | Enter the system log server's UDP port number here. This value must be between 514,1024 and 65535.   |
| Facility                 | Specifies an application from which system logs are sent to<br>the remote server. Only one facility can be assigned to a<br>single server. If a second facility level is assigned, the first<br>facility is overwritten. There are up to eight facilities can be<br>assigned (Local 0 to Local 7). |
| Severity                 | Select the severity value of the type of information that will be logged. Options to choose from are <b>Warning, informational,</b> and <b>All</b>   |
|                          | The possible levels are:   |
|                          | <b>Warning</b> - The lowest level of a device warning. The device is functioning, but an operational problem has occurred.   |
|                          | Informational - Provides device information.   |
|                          | All - Displays all levels of system logs.  |

Click the **Apply** button to accept the changes made.

## System Log

This window is used to view and clear the system log.

To view the following window, click **System > System Log > System Log**, as shown below:

|       |                      |       |  | Clear |
|-------|----------------------|-------|--|-------|
| Index | Time                 | Level | Log Description                                    | _     |
| 1     | Jan 01 2000 00:00:50 | 7     | LINEPROTO-7-INFO: eth0/1 is set to enabled         |       |
| 2     | Jan 01 2000 00:00:50 | 7     | LINEPROTO-7-INFO: eth0/2 is set to enabled         |       |
| 3     | Jan 01 2000 00:00:50 | 7     | LINEPROTO-7-INFO: eth0/3 is set to enabled         |       |

Click the Clear button to clear the system log entries displayed in the table.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## Time

The Simple Network Time Protocol (SNTP) is a protocol for synchronizing computer clocks through the Internet. It provides comprehensive mechanisms to access national time and frequency dissemination services, organize the SNTP subnet of servers and clients, and adjust the system clock in each participant.

## **Clock Settings**

This window is used to configure the time settings for the switch.

To view the following window, click **System > Time > Clock Settings**, as shown below:

| Clock Settings        |          |       |
|-----------------------|----------|-------|
| Clock Settings        |          |       |
| Time (HH:MM:SS)       | 0:26:26  |       |
| Date (DD / MM / YYYY) | 1/1/2000 |       |
|                       |          | Apply |

Figure 6-13 Clock Settings window

The fields that can be configured are described below:

| Parameter             | Description  |
|-----------------------|--|
| Time (HH:MM:SS)       | Enter the current time in hours, minutes, and seconds.             |
| Date (DD / MM / YYYY) | Enter the current day, month, and year to update the system clock. |

Click the **Apply** button to accept the changes made.

## **Time Zone Settings**

This window is used to configure time zones and Daylight Savings Time settings for SNTP. To view the following window, click **System > Time > Time Zone Settings**, as shown below:

| me Zone Settings        |             |  |
|-------------------------|-------------|--|
| Summer Time State       | Disabled    |  |
| Time Zone               | + • 8 • 0 • |  |
| From: Date of the Month |             |  |
| From: Month             | Jan 🔻       |  |
| From:Year               | 2000        |  |
| From: Time (HH:MM)      |             |  |
| Fo: Date of the Month   | 1           |  |
| To: Month               | Jan 🔻       |  |
| Fo: Year                | 2001        |  |
| fo: Time (HH:MM)        |             |  |
| Offset                  | 30          |  |

Figure 6-124 Time Zone Settings window

The fields that can be configured are described below:

| Parameter         | Description  |
|-------------------|--|
| Summer Time State | Select the summer time setting. Options to choose from are <b>Disabled</b> , and <b>Date Setting</b> .     |
|                   | Disabled - Select to disable the summer time setting.  |
|                   | <b>Date Setting</b> - Select to configure the summer time that should start and end on the specified date. |
| Time Zone         | Select to specify your local time zone's offset from Coordinated Universal Time (UTC).                     |

The fields that can be configured for **Date Setting** are described below:

| Parameter               | Description   |  |  |  |
|-------------------------|---|--|--|--|
| From: Date of the Month | Select date of the month that summer time will start.   |  |  |  |
| From: Month             | Select the month that summer time will start.   |  |  |  |
| From: Year              | Enter the year that the summer time will start.   |  |  |  |
| From: Time (HH:MM)      | Select the time of the day that summer time will start.   |  |  |  |
| To: Date of the Month   | Select date of the month that summer time will end.   |  |  |  |
| To: Month               | Select the month that summer time will end.   |  |  |  |
| To: Year                | Enter the year that the summer time will end.   |  |  |  |
| To: Time (HH:MM)        | Select the time of the day that summer time will end.   |  |  |  |
| Offset                  | Enter the number of minutes to add during summer time. The default value is 30. The range of this offset is 30, 60, 90 and 120. |  |  |  |

Click the **Apply** button to accept the changes made.

## **SNTP Settings**

This window is used to configure the time settings for the switch.

To view the following window, click **System > Time > SNTP Settings**, as shown below:

| NTP Settings         |          |         |         |              |
|----------------------|----------|---------|---------|--------------|
| SNTP Global Settings |          |         |         |              |
| Current Time Source  | Local    |         |         |              |
| SNTP State           | Disabled | •       |         | Apply        |
| NTP Server Setting   |          |         |         |              |
| IPv4 Address         |          | *       |         | Apply        |
| SNTP server          |          | Stratum | Version | Last Receive |
| SNTP                 |          |         |         |              |

Figure 6-135 SNTP Settings window

The fields that can be configured for SNTP Global Settings are described below:

| Parameter           | Description   |
|---------------------|---|
| Current Time Source | This will indicate the current time source and will change<br>from System Clock to SNTP when SNTP is configured and<br>functioning. |
| SNTP State          | Select this option to enable or disable SNTP.   |

Click the **Apply** button to accept the changes made.

The fields that can be configured for SNTP Server Setting are described below:

| Parameter    | Description   |
|--------------|---|
| IPv4 Address | Enter the IP address of the SNTP server which provides the clock synchronization. |

Click the Apply button to add the SNTP server.

## **Time Profile**

This window is used to view and configure the time range settings. The maximum number of time profiles supported by the switch is 4.

To view the following window, click **System > Time Profile**, as shown below:

| Range Name<br>From: Week<br>From: Time (HH:MM) | 8 chars Da    | To: Week<br>To: Time (HH:MM) | Sun 00 🔽 00 | End Week Day | Apply |
|--|---------------|------------------------------|-------------|--------------|-------|
| Range Name                                     | Start Weekday | Start Time                   | End Weekday | End Time     | -     |

Figure 6-146 Time Profile window

The fields that can be configured are described below:

| Parameter           | Description   |  |  |  |
|---------------------|---|--|--|--|
| Range Name          | Enter the name of the time range. This name can be up to 8 characters long.   |  |  |  |
| From Week / To Week | Select the starting and ending days of the week that will be<br>used for this time range. Tick the <b>Daily</b> option to use this<br>time range for every day of the week. Tick the <b>End Week</b><br><b>Day</b> option to use this time range from the starting day of the<br>week until the end of the week, which is Sunday. |  |  |  |
| From Time / To Time | Select the starting and ending time of the day that will be<br>used for this time range. The first drop-down menu selects<br>the hour and the second drop-down menu selects the<br>minute.  |  |  |  |

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

# 7. Management

User Account Settings SNMP HTTP/HTTPS D-Link Discovery Protocol

# **User Account Settings**

This window is used to configure the user accounts. The active user account sessions can be viewed.

There are several configuration options available in the Web User Interface (Web UI). The set of configuration options available to the user depends on the account's **Privilege Level**.

NOTE: By default, the admin account is created on the switch.

To view the following window, click **Management > User Account Settings**, as shown below:

| ser Accounts Settings    |          |                 |       |        |
|--------------------------|----------|-----------------|-------|--------|
| ser Name admin 🔻         | Password | 20 chars        |       | Apply  |
|                          |          |                 |       |        |
| otal Entries: 2          |          |                 |       |        |
| otal Entries: 2          |          | Privilege       |       |        |
| otal Entries: 2<br>admin |          | Privilege<br>15 | ***** | Delete |

Figure 7-1 User Accoung Settings window

The fields that can be configured are described below:

| Parameter | Description                              |
|-----------|--|
| User Name | Select the user account name here.       |
| Password  | Enter the password for the account here. |

Click the Apply button to accept the changes made.

Note: Only one user can be logged into the switch at any time.

## SNMP

Simple Network Management Protocol (SNMP) is an OSI Layer 7 (Application Layer) designed specifically for managing and monitoring network devices. SNMP enables network management stations to read and modify the settings of gateways, routers, switches, and other network devices. Use SNMP to configure system features for proper operation, monitor performance and detect potential problems in the switch, switch group or network.

Managed devices that support SNMP include software (referred to as an agent), which runs locally on the device. A defined set of variables (managed objects) is maintained by the SNMP agent and used to manage the device. These objects are defined in a Management Information Base (MIB), which provides a standard presentation of the information controlled by the on-board SNMP agent. SNMP defines both the format of the MIB specifications and the protocol used to access this information over the network.

The switch supports the SNMP versions 1, and 2c. The two versions of SNMP vary in the level of security provided between the management station and the network device.

In SNMP v.1 and v2c, user authentication is accomplished using 'community string', which function like passwords. The remote user SNMP application and the switch SNMP must use the same community string. SNMP packets from any station that has not been authenticated are ignored (dropped).

#### <u>Traps</u>

Traps are messages that alert network personnel of events that occur on the switch. The events can be as serious as a reboot (someone accidentally turned OFF the switch), or less serious like a port status change. The switch generates traps and sends them to the trap recipient (or network manager). Typical traps include trap messages for Authentication Failure, and Topology Change.

#### <u>MIBs</u>

The switch in the Management Information Base (MIB) stores management and counter information. The switch uses the standard MIB-II Management Information Base module. Consequently, values for MIB objects can be retrieved from any SNMP-based network management software. In addition to the standard MIB-II, the switch also supports its own proprietary enterprise MIB as an extended Management Information Base. Specifying the MIB Object Identifier may also retrieve the proprietary MIB. MIB values can be either read-only or read-write.

The switch supports the Simple Network Management Protocol (SNMP) versions 1, and 2c. The administrator can specify the SNMP version used to monitor and control the switch.

SNMP settings are configured using the menus located on the SNMP folder of the Web manager. Workstations on the network that are allowed SNMP privileged access to the switch can be restricted with the Management Station IP Address menu.

## **SNMP Global Settings**

This window is used to configure the SNMP global settings and trap settings.

To view the following window, click **Management > SNMP > SNMP Global Settings**, as shown below:

| SNMP Global Settings     |         |          |  |     |
|--------------------------|---------|----------|--|-----|
| SNMP Global Settings     |         |          |  |     |
| SNMP Global State        | Enabled | Disabled |  |     |
| Trap Settings            |         |          |  |     |
| Trap Global State        | Enabled | Disabled |  |     |
| SNMP Authentication Trap |         |          |  |     |
| Port Link Up             |         |          |  |     |
| Port Link Down           |         |          |  |     |
| Coldstart                |         |          |  |     |
| PD Alive                 |         |          |  |     |
| 🔲 Warmstart              |         |          |  |     |
| STP Trap                 |         |          |  | Apr |

Figure 7-2 SNMP Global Settings window

The fields that can be configured for SNMP Global Settings are described below:

| Parameter         | Description   |
|-------------------|---|
| SNMP Global State | Select this option to enable or disable the SNMP feature. |

The fields that can be configured for Trap Settings are described below:

| Parameter                | Description  |  |  |  |
|--------------------------|--|--|--|--|
| Trap Global State        | Select this option to enable or disable the sending of all or specific SNMP notifications. |  |  |  |
| SNMP Authentication Trap | Tick this option to control the sending of SNMP authentication failure notifications.      |  |  |  |
| Port Link Up             | Tick this option to control the sending of port link up notifications.                     |  |  |  |
| Port Link Down           | Tick this option to control the sending of port link down notifications.                   |  |  |  |
| PD Alive                 | Tick this option to control the sending of PD offline notifications.                       |  |  |  |
| Coldstart                | Tick this option to control the sending of Cold Start notifications.                       |  |  |  |
| Warmstart                | Tick this option to control the sending of Warm Start notifications.                       |  |  |  |
| STP Trap                 | Tick this option to control the sending of STP state notifications.                        |  |  |  |

Click the **Apply** button to accept the changes made.

## **SNMP Community Table Settings**

This window is used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the

agent on the switch. One or more of the following characteristics can be associated with the community string:

• Read-write or Read-only level permission for the MIB objects accessible to the SNMP community.

To view the following window, click **Management > SNMP > SNMP Community Table Settings**, as shown below:

| SNMP Community Table Settings |                |          |       |  |  |
|-------------------------------|----------------|----------|-------|--|--|
| SNMP Community Settings       |                |          |       |  |  |

| Total Entries: 2              |                |          |       |  |  |
| Access Right Community Name   |                |          |       |  |  |

Figure 7-3 SNMP Community Table Settings window

The fields that can be configured are described below:

| Parameter      | Description   |
|----------------|---|
| Access Right   | Select the access right here. Options to choose from are <b>Read Only</b> , and <b>Read Write</b> .   |
|                | <b>Read Only-</b> SNMP community members using the community string created can only read the contents of the MIBs on the switch.   |
|                | <b>Read Write</b> -SNMP community members using the community string created can read from, and write to the contents of the MIBs on the switch.  |
| Community Name | Enter an alphanumeric string of up to 16 characters that is<br>used to identify members of an SNMP community. This<br>string is used like a password to give remote SNMP<br>managers access to MIB objects in the switch's SNMP<br>agent. |

Click the **Apply** button to accept the changes made.

### **SNMP Host Table Settings**

This window is used to configure and display the recipient of the SNMP notification.

To view the following window, click **Management > SNMP > SNMP Host Table Settings**, as shown below:

| ost IPv4 Address<br>ser-based Security Model | SNMPv1                  |                  |       |
|--|-------------------------|------------------|-------|
| ommunity String<br>Host IP Address           | 16 chars SNMP Version   | Community String | Apply |
| 10.90.90.108                                 | SNMP Version<br>SNMPv2c | public           | Clear |

Figure 7-4 SNMP Host Table Settings

The fields that can be configured are described below:

| Parameter                    | Description   |
|------------------------------|---|
| Host IPv4 Address            | Enter the IPv4 address of the SNMP notification host.   |
| User-based Security<br>Model | Select the security model here. Options to choose from are <b>SNMPv1</b> , and <b>SNMPv2c</b> . |
|                              | <b>SNMPv1</b> - Select to allow the group user to use the SNMPv1 security model.                |
|                              | <b>SNMPv2c</b> -Select to allow the group user to use the SNMPv2c security model.               |
| Community String             | Enter the community string to be sent with the notification packet.                             |

Click the **Apply** button to accept the changes made.

Click the Clear button to remove SNMP Host.

## HTTP/HTTPS

This window is used to configure Web settings on the switch.

To view the following window, click **Management > HTTP/HTTPS**, as shown below:

| HTTP/HTTPS                     |              |       |
|--------------------------------|--------------|-------|
| HTTP/HTTPS                     |              |       |
| Web Session                    | HTTP O HTTPS |       |
| Web Session Timeout (60-36000) | 180 sec      | Apply |

Figure 7-5 HTTP/HTTPS window

| Parameter                         | Description  |
|-----------------------------------|--|
| Web Session                       | Select this option to enable the configuration through HTTP or HTTPS. <b>Note:</b> When switching from HTTP to HTTPS mode, the |
|                                   | switch will take about 30 seconds to initialize the secured HTTP environment.  |
| Web Session Timeout(60-<br>36000) | Enter a value for the amount of time in seconds before the web session expires.  |

The fields that can be configured for HTTP/HTTPS Settings are described below:

Click the **Apply** button to accept the changes made.

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

## **D-Link Discovery Protocol**

This window is used to configure and display D-Link Discovery Protocol (DDP).

To view the following window, click **Management > D-Link Discovery Protocol**, as shown below:

| D-Link Discovery Protocol       |                       |       |
|---------------------------------|-----------------------|-------|
| D-Link Discovery Protocol       |                       |       |
| D-Link Discovery Protocol State | Enabled      Disabled |       |
| Report Timer                    | Never sec             | Apply |

Figure 7-6 D-Link Discovery Protocol window

The fields that can be configured for **D-Link Discovery Protocol** are described below:

| Parameter                          | Description  |
|------------------------------------|--|
| D-Link Discovery Protocol<br>State | Select this option to enable or disable DDP global state.  |
| Report Timer                       | Select the interval in seconds between two consecutive DDP report messages. Options to choose from are <b>30</b> , <b>60</b> , <b>90</b> , <b>120</b> , and <b>Never</b> . |

Click the **Apply** button to accept the changes made.

### Static FDB

### **Unicast Static FDB**

This window is used to view and configure the static unicast forwarding settings on the switch.

To view the following window, click L2 Features > FDB > Static FDB > Unicast Static FDB, as shown below:

| nicast Static FDB |             |             |                   |          |
|-------------------|-------------|-------------|-------------------|----------|
| Port eth1 ▼       | VID(1-4094) | MAC Address | 00-84-57-00-00-00 | Apply    |
| otal Entries: 0   |             |             |                   | Delete A |

Figure 8-1 Unicast Static FDB window

| Parameter   | Description   |  |
|-------------|---|--|
| Port        | Allows the selection of the port number on which the MAC address entered resides.                                   |  |
| VID         | Enter the VLAN ID on which the associated unicast MAC address resides.  |  |
| MAC Address | Enter the MAC address to which packets will be statically forwarded or dropped. This must be a unicast MAC address. |  |

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

Click the **Delete All** button to delete all the entries found in the display table.

Click the **Delete** button to remove the specified entry.

### **Multicast Static FDB**

This window is used to view and configure the multicast static FDB settings. To view the following window, click L2 Features > FDB > Static FDB > Multicast Static FDB, as shown below:

| Multicast Static FDI | 3       |             |                |            |
|----------------------|---------|-------------|----------------|------------|
| Multicast Static FDB |         |             |                |            |
| From Port            | To Port | VID(1-4094) | MAC Address    |            |
| eth1 ▼               | eth1 •  |             | 01-00-00-00-02 | Apply      |

| VID                  |         | MAC Address | Egress Ports   |            |

Figure 8-2 Multicast Static FDB window

The fields that can be configured are described below:

| Parameter           | Description  |
|---------------------|--|
| From Port / To Port | Select the appropriate port range used for the configuration here.   |
| VID                 | Enter the VLAN ID of the VLAN the corresponding MAC address belongs to.  |
| MAC Address         | Enter the static destination MAC address of the multicast packets. This must be a multicast MAC address. The format of the destination MAC address is 01-XX-XX-XX-XX-XX. |

Click the Apply button to accept the changes made.

Click the Delete All button to remove all the entries.

Click the **Delete** button to remove the specific entry.

### **MAC Address Table Settings**

This window is used to view and configure the MAC address table's global settings.

To view the following window, click L2 Features > FDB > MAC Address Table Settings, as shown below:

| Global Settings     | MAC Address Learning |     |
|---------------------|----------------------|-----|
| Aging Time(10-630s) | 300                  | sec |
| Aging Time(10-630s) | 300                  | Sec |

Figure 8-3 MAC Address Table Settings (Global Settings) window

The fields that can be configured are described below:

| Parameter           | Description  |
|---------------------|--|
| Aging Time(10-630s) | Enter the MAC address table's aging time value here. This value must be between 10 and 630 seconds. By default, this value is 300 seconds. |

Click the **Apply** button to accept the changes made.

After clicking the **MAC Address Learning** tab, at the top of the page, the following page will be available.

| Global Se | ettings | MAC | Address Learning |   |         |       |
|-----------|---------|-----|------------------|---|---------|-------|
| From Port | To Port |     | State            |   |         |       |
| eth1      | eth1    | ۲   | Enabled          | • |         | Apply |
|           | Port    | 8   |                  |   | State   |       |
|           | eth 1   |     |                  |   | Enabled |       |
|           | eth2    |     |                  |   | Enabled |       |
|           | eth3    |     |                  |   | Enabled |       |
|           | eth4    |     |                  |   | Enabled |       |
|           | eth5    |     |                  |   | Enabled |       |
|           | eth6    |     |                  |   | Enabled |       |
|           | eth7    |     |                  |   | Enabled |       |
|           | eth8    |     |                  |   | Enabled |       |
|           | eth9    |     |                  |   | Enabled |       |
|           | eth 10  | ý.  |                  | 8 | Enabled |       |

The fields that can be configured are described below:

| Parameter           | Description  |
|---------------------|--|
| From Port / To Port | Select the range of ports that will be used for this configuration here.                   |
| State               | Select to enable or disable the MAC address learning function on the ports specified here. |

Click the **Apply** button to accept the changes made.

## **MAC Address Table**

This window is used to view the entries listed in the MAC address table.

To view the following window, click L2 Features > FDB > MAC Address Table, as shown below:

| MAC Address Table |             |      |           |
|-------------------|-------------|------|-----------|
| MAC Address Table |             |      |           |
|                   |             |      | Clear All |
| VID               | MAC Address | Туре | Port      |

Figure 8-5 MAC Address Table window

Click the Clear All button to clear all dynamic MAC addresses.

# VLAN

## 802.1Q VLAN

This window is used to view and configure the VLAN settings on this switch.

To view the following window, click L2 Features > VLAN > 802.1Q VLAN, as shown below:

| 802.1Q VLAN<br>802.1Q VLAN |           |                     |                       |           |       |        |
|----------------------------|-----------|---------------------|-----------------------|-----------|-------|--------|
| VID List (2-4094)          | 3 or 2-5  |                     |                       |           | Apply | Delete |
| LAN List                   |           |                     |                       |           |       |        |
| VID                        | VLAN Name | Tagged Member Ports | Untagged Member Ports | VLAN Type |       |        |

Figure 8-6 802.1Q VLAN window

The fields that can be configured for 802.1Q VLAN are described below:

| Parameter | Description                                       |
|-----------|---|
| VID List  | Enter the VLAN ID list that will be created here. |

Click the **Apply** button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **Port-based VLAN**

This window is used to configure the asymmetric VLAN function.

To view the following window, click L2 Features > VLAN > Port-based VLAN, as shown below:

| ort-based VLAN Status Setti | ngs     |          |       |
|-----------------------------|---------|----------|-------|
| VLAN State                  | Enabled | Disabled | Apply |

Figure 8-7 Port-based VLAN window

The fields that can be configured are described below:

| Parameter  | Description   |
|------------|---|
| VLAN State | Select this option to enable or disable the Port-based VLAN function. |

Click the **Apply** button to accept the changes made.

When choose enable the Port-based VLAN:

To view the following window, click L2 Features > VLAN > Port-based VLAN, as shown below:

| t-based VLAN Status Setting                                       | s                    |   |   |
|---|----------------------|---|---|
| AN State  | Enabled Obsabled     |   | Apply   |

Figure 8-9 Port-based VLAN(Port-based VLAN Settings) window

| Parameter  | Description  |
|------------|--|
| VLAN Index | Enter the VLAN ID used for this configuration here. This value must be between 2 and 4094. |
| VLAN Name  | Enter the name of the VLAN here.Name should be less than 32 characters.                    |

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

Click the **Cancel** button to giveup the changes made.

Click the Edit button to change the name of the specified vlan.

Click the **Delete** button to delete the specified vlan.

Click the VLAN Index number to Modify the specified vlan member port, as shown below:

| AN Index | 10   |      |      |      |      |      |      |      |      |       |
|----------|------|------|------|------|------|------|------|------|------|-------|
| _AN Name | 10   |      |      |      |      |      |      |      |      |       |
|          | eth1 | eth2 | eth3 | eth4 | eth5 | eth6 | eth7 | eth8 | eth9 | eth10 |
| Member   |      |      |      |      |      |      |      | Ē    |      | V     |

Figure 8-10 Port-based VLAN window

Tick the specified port to add in the specified VLAN.

Click the Apply button to accept the changes .

Click the Previous Page button go back to the previous page .

#### NOTE:

If you want to delete an existing vlan, you need to delete the member ports first.

If you want to delete the last two member ports (uplink port), you need to go to Surveillance mode to delete.

### **Management VLAN**

This window is used to configure the asymmetric VLAN function.

To view the following window, click L2 Features > VLAN > Management VLAN, as shown below:

| Management VLAN Settings             |   |       |
|--------------------------------------|---|-------|
| Management VLAN Settings             |   |       |
| Management VLAN State                | Enabled   Disabled                                |       |
| VID(1-4094)                          | 1   | Apply |
| Note: When 802.1Q Management VLAN is | enabled, the 802.1Q VLAN should be enabled first. |       |

Figure 8-11 Asymmetric VLAN window

The fields that can be configured are described below:

| Parameter             | Description   |
|-----------------------|---|
| Management VLAN State | Select this option to enable or disable the Management VLAN function.               |
| VID                   | VLAN VID is a unique number (between 1 and 4094) that identifies a particular VLAN. |

Click the **Apply** button to accept the changes made.

### **Asymmetric VLAN**

This window is used to configure the asymmetric VLAN function.

To view the following window, click L2 Features > VLAN > Asymmetric VLAN, as shown below:

| symmetric VLAN        |         |          |       |
|-----------------------|---------|----------|-------|
| Asymmetric VLAN       |         |          |       |
| Asymmetric VLAN State | Enabled | Disabled | Apply |

Figure 8-12 Asymmetric VLAN window

The fields that can be configured are described below:

| Parameter             | Description  |
|-----------------------|--|
| Asymmetric VLAN State | Select this option to enable or disable the asymmetric VLAN function |

Click the **Apply** button to accept the changes made.

## **VLAN Interface**

This window is used to view and configure VLAN interface settings.

To view the following window, click L2 Features > VLAN > VLAN Interface, as shown below:

| VLAN Inter    | face      |                  |                       |                                       |
|---------------|-----------|------------------|-----------------------|---------------------------------------|
| VLAN Interfac | e         |                  |                       |                                       |
| Port          | VLAN Mode | Ingress Checking | Acceptable Frame Type |                                       |
|               |           |                  |                       | · · · · · · · · · · · · · · · · · · · |

#### Figure 8-13 VLAN Interface window

Click the **View Detail** button to view more detailed information about the VLAN on the specific interface.

Click the **Edit** button to re-configure the specific entry.

| AN Interface Information – |           |  |
|----------------------------|-----------|--|
| Port                       | eth1      |  |
| /LAN Mode                  | Hybrid    |  |
| Native VLAN                | 1         |  |
| Hybrid Untagged VLAN       | 1,        |  |
| Hybrid Tagged VLAN         | -         |  |
| ngress Checking            | Enabled   |  |
| Acceptable Frame Type      | Admit All |  |

After clicking the VLAN Detail button, the following page will appear.

Figure 8-14 VLAN Interface Information window

More detailed information about the VLAN of the specific interface is displayed.

Click the **Back** button to return to the previous window.

After click the **Edit** button, the following window will appear. This is a dynamic window that will change when a different **VLAN Mode** was selected. When **Access** was selected as the **VLAN Mode**, the following page will appear.

| 'o Port |      |  |

The fields that can be configured are described below:

Click the Apply button to accept the changes made.

Click the **Back** button to return to the previous window.

## **Auto Surveillance VLAN**

### **Auto Surveillance Properties**

This window is used to configure the auto surveillance VLAN global settings and display the ports surveillance VLAN information.

To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > Auto Surveillance Properties, as shown below:

| Auto Surveillance Properties                       |                             |  |       |
|--|-----------------------------|--|-------|
| Global Settings                                    |                             |  |       |
| Surveillance VLAN<br>Surveillance VLAN ID (2-4094) | C Enabled   Disabled        |  |       |
| Surveillance VLAN CoS<br>Aging Time (1-65535)      | 5 <b>*</b><br>720 min       |  |       |
| Note: Surveillance VLAN ID and Voice V             | LAN ID can not be the same. |  | Apply |

Figure 8-18 Auto Surveillance Properties window

The fields that can be configured for **Global Settings** are described below:

| Parameter             | Description   |  |
|-----------------------|---|--|
| Surveillance VLAN     | Select this option to enable or disable the surveillance VLAN state   |  |
| Surveillance VLAN ID  | Enter the surveillance VLAN ID. The range is from 2 to 4094.  |  |
| Surveillance VLAN CoS | Select the priority of the surveillance VLAN from 0 to 7.   |  |
| Aging Time            | Enter the aging time of surveillance VLAN. The range is from<br>1 to 65535 minutes. The default value is 720 minutes. The<br>aging time is used to remove a port from surveillance VLAN<br>if the port is an automatic surveillance VLAN member. When<br>the last surveillance device stops sending traffic and the<br>MAC address of this surveillance device is aged out, the<br>surveillance VLAN aging timer will be started. The port will<br>be removed from the surveillance VLAN after expiration of<br>surveillance VLAN aging timer. If the surveillance traffic<br>resumes during the aging time, the aging timer will be reset<br>and stop. |  |

Click the **Apply** button to accept the changes made.

### **MAC Settings and Surveillance Device**

This window is used to configure the user-defined surveillance device OUI and display the surveillance VLAN information.

To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > MAC Settings and Surveillance Device, as shown below:

| User-defined                     | MAC Settings               | Auto Surveillance VLA      | N Summary                            |             |                                  |                           |        |

Figure 8-20 MAC Settings and Surveillance Device(Auto Surveillance VLAN Summary) window

## Voice VLAN

### Voice VLAN Global

Voice VLAN is a VLAN used to carry voice traffic from IP phone. Because the sound quality of an IP phone call will be deteriorated if the data is unevenly sent, the quality of service (QoS) for voice traffic shall be configured to ensure the transmission priority of voice packet is higher than normal traffic.

The switches determine whether a received packet is a voice packet by checking its source MAC address. If the source MAC addresses of packets comply with the organizationally unique identifier (OUI) addresses configured by the system, the packets are determined as voice packets and transmitted in voice VLAN.

To view the following window, click L2 Features > VLAN > Voice VLAN > Voice VLAN Global, as show below:

| Voice VLAN Global  |                                      |       |
|--|--------------------------------------|-------|
| Voice VLAN Global  |                                      |       |
| Voice VLAN State<br>Voice VLAN ID (2-4094)<br>Voice VLAN CoS<br>Aging Time (1-65535)<br>Member Ports<br>Dynamic Member Ports | Enabled Disabled  5  720 min         |       |
|  | d Voice VLAN ID can not be the same. | Apply |

Figure 8-21 Voice VLAN Global window

The fields that can be configured are described below:

| Parameter             | Description  |  |
|-----------------------|--|--|
| Voice VLAN State      | Select this option to enable or disable the voice VLAN.  |  |
| Voice VLAN ID(2-4094) | Enter the voice VLAN ID. The value is range from 2 to 4094.  |  |
| Voice VLAN CoS        | Select the priority of the voice VLAN from 0 to 7.   |  |
| Aging Time(1-65535)   | Enter the aging time of surveillance VLAN. The range is<br>from 1 to 65535 minutes. The default value is 720 minutes.<br>The aging time is used to remove a port from voice VLAN if<br>the port is an automatic VLAN member. When the last voice<br>device stops sending traffic and the MAC address of this<br>voice device is aged out, the voice VLAN aging timer will be<br>started. The port will be removed from the voice VLAN after<br>expiration of voice VLAN aging timer. If the voice traffic<br>resumes during the aging time, the aging timer will be reset<br>and stop. |  |

Click the Apply button to accept the changes made for each individual section.

### **Voice VLAN Port**

This window is used to configure the user-defined voice traffic's port.

To view the following window, click L2 Features > VLAN > Voice VLAN > Voice VLAN OUI, as show below:

| CE VLAN Port |                 |         |                       |        |
|--------------|-----------------|---------|-----------------------|--------|
| rom Port     | To Port<br>eth1 | State V | Mode<br>Auto Untagged | A      |
| Port         |                 | State   |                       | Mode   |
| eth1         |                 | Disabed |                       | Manual |
| eth2         |                 | Disabed |                       | Manual |
| eth3         |                 | Disabed |                       | Manual |
| eth4         |                 | Disabed |                       | Manual |
| eth5         |                 | Disabed |                       | Manual |
| eth6         |                 | Disabed |                       | Manual |
| eth7         |                 | Disabed |                       | Manual |
| eth8         |                 | Disabed |                       | Manual |
| eth9         |                 | Disabed |                       | Manual |
| eth10        |                 | Disabed |                       | Manual |

#### Figure 8-22 Voice VLAN Port window

The fields that can be configured are described below:

| Parameter           | Description   |
|---------------------|---|
| From Port / To Port | Select the range of ports that will be used for this configuration here.  |
| State               | Select this option to enable or disable the Voice VLAN state of the port.   |
| Mode                | Choose the Voice VLAN mode for the port. This can be <b>Auto untagged</b> , <b>Auto Tagged</b> , or <b>Manual</b> configured. |

Click the **Apply** button to accept the changes made.

### Voice VLAN OUI

This window is used to configure the user-defined voice traffic's OUI. The OUI is used to identify the voice traffic. There are a number of pre-defined OUIs. The user can further define the user-defined OUIs if needed. The user-defined OUI cannot be the same as the pre-defined OUI.

To view the following window, click L2 Features > VLAN >Voice VLAN > Voice VLAN OUI, as show below:

| oice VLAN OUI     |                        |              |       |
|-------------------|------------------------|--------------|-------|
| OUI Address Mas   | k Description          |              |       |
| 00-01-E3-00-00-00 | FF-FF-00-00-00 8 chars |              | Apply |
| Fotal Entries: 8  |                        |              |       |
| OUI Address       | Mask                   | Description  |       |
| 00-E0-BB-00-00-00 | FF-FF-FF-00-00         | 3COM         | Delet |
| 00-03-6B-00-00-00 | FF-FF-FF-00-00-00      | Cisco        | Delet |

| 00-01-E3-00-00-00 | FF-FF-FF-00-00-00      | Siemens      | Delet |
| 00-60-89-00-00-00 | FF-FF-FF-00-00-00      | NEC/Phillips | Delet |
| 00-0F-E2-00-00-00 | FF-FF-FF-00-00-00      | Huawei-3COM  | Delet |
| 00-01-12-00-00-00 |                        |              |       |

Figure 8-23 Voice VLAN OUI window

The fields that can be configured are described below:

| Parameter   | Description  |  |
|-------------|--|--|
| OUI Address | Enter the OUI MAC address.   |  |
| Mask        | Enter the OUI MAC address matching bitmask.                                    |  |
| Description | Enter the description for the user-defined OUI with a maximum of 8 characters. |  |

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### **Voice VLAN Device**

This window is used to show voice devices that are connected to the ports. The start time is the time when the device is detected on this port, the activate time is the latest time saw the device sending the traffic.

To view the following window, click L2 Features > VLAN > Voice VLAN > Voice VLAN Device, as show below:

| Voice VLAN Device                    |                      |  |
|--------------------------------------|----------------------|--|
| Voice VLAN Device Table              |                      |  |
| Port Voice Device Address Start Time |                      |  |
|                                      | Voice Device Address |  |

Figure 8-24 Voice VLAN Device window

# **Spanning Tree**

This switch supports two versions of the Spanning Tree Protocol: 802.1D-1998 STP, 802.1D-2004 Rapid STP. 802.1D-1998 STP will be familiar to most networking professionals. However, since 802.1D-2004 RSTP has been recently introduced to DGS-1100 MP/MPP switches, a brief introduction to the technology is provided below followed by a description of how to set up 802.1D-1998 STP, 802.1D-2004 RSTP.

#### 802.1D-2004 Rapid Spanning Tree

Rapid Spanning Tree Protocol (RSTP) as defined by the IEEE 802.1D-2004 specification and a version compatible with the IEEE 802.1D-1998 STP. RSTP can operate with legacy equipment implementing IEEE 802.1D-1998; however the advantages of using RSTP will be lost.

The IEEE 802.1D-2004 Rapid Spanning Tree Protocol (RSTP) evolved from the 802.1D-1998 STP standard. RSTP was developed in order to overcome some limitations of STP that impede the function of some recent switching innovations, in particular, certain Layer 3 functions that are increasingly handled by Ethernet switches. The basic function and much of the terminology is the same as STP. Most of the settings configured for STP are also used for RSTP. This section introduces some new Spanning Tree concepts and illustrates the main differences between the two protocols.

#### Edge Port

The edge port is a configurable designation used for a port that is directly connected to a segment where a loop cannot be created. An example would be a port connected directly to a single work-station. Ports that are designated as edge ports transition to a forwarding state immediately without going through the listening and learning states. An edge port loses its status if it receives a BPDU packet, immediately becoming a normal spanning tree port.

**Note**: If Spanning Tree protocol is used, loopback detection will not be available. If Loopback Detection is enabled, the Spanning Tree protocol will not be available. The spanning tree and erps functions cannot be turned on at the same time.

## **STP Global Settings**

This window is used to view and configure the STP global settings.

To view the following window, click **L2 Features > Spanning Tree > STP Global Settings**, as shown below:

| Spanning Tree Global Settir | ngs       |          |       |
|-----------------------------|-----------|----------|-------|
| Spanning Tree State         |           |          |       |
| Spanning Tree State         | O Enabled | Disabled | Apply |
| Spanning Tree Mode          |           |          |       |
| Spanning Tree Mode          | ○ RSTP    | ) STP    | Apply |
| STP Traps                   |           |          |       |
| STP New Root Trap           | Enabled   | Disabled |       |
| STP Topology Change Trap    | O Enabled | Disabled | Apply |
| Root Bridge Information     |           |          |       |
| Root Bridge                 |           |          |       |
| Root Cost                   |           |          |       |
| Root Maximum Age            |           |          |       |
| Root Forward Delay          |           |          |       |
| Root Port                   |           |          |       |

#### Figure 8-25 STP Global Settings window

The field that can be configured for **Spanning Tree State** is described below:

| Parameter           | Description  |
|---------------------|--|
| Spanning Tree State | Select this option to enable or disable the STP global state here. |

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Spanning Tree Mode** are described below:

| Parameter          | Description  |
|--------------------|--|
| Spanning Tree Mode | Select the STP mode used here. Options to choose from are <b>RSTP</b> , and <b>STP</b> . |

Click the **Apply** button to accept the changes made.

The fields that can be configured for **STP Traps** are described below:

| Parameter                   | Description   |  |
|-----------------------------|---|--|
| STP New Root Trap           | Select this option to enable or disable the STP new root trap option here.        |  |
| STP Topology Change<br>Trap | Select this option to enable or disable the STP topology change trap option here. |  |

Click the **Apply** button to accept the changes made.

### **STP Port Settings**

This window is used to view and configure the STP port settings.

To view the following window, click **L2 Features > Spanning Tree > STP Port Settings**, as shown below:

| STP Port Settings |         |                      |       |
|-------------------|---------|----------------------|-------|
| STP Port Settings |         |                      |       |
| From Port         | To Port | Port Fast<br>Network |       |
|                   |         |                      | Apply |
| Port              |         | Port Fast            | State |

Figure 8-26 STP Port Settings window

The fields that can be configured are described below:

| Parameter           | Description   |
|---------------------|---|
| From Port / To Port | Select the appropriate port range used for the configuration here.  |
| Port Fast           | Select the port fast option here. Options to choose from are<br><b>Network</b> , <b>Disabled</b> , and <b>Edge</b> . In the <b>Network</b> mode the<br>port will remain in the non-port-fast state for three seconds.<br>The port will change to the port-fast state if no BPDU is<br>received and changes to the forwarding state. If the port<br>received the BPDU later, it will change to the non-port-fast<br>state. In the <b>Disable</b> mode, the port will always be in the<br>non-port-fast state. It will always wait for the forward-time<br>delay to change to the forwarding state. In the <b>Edge</b> mode,<br>the port will directly change to the spanning-tree forwarding<br>state when a link-up occurs without waiting for the forward-<br>time delay. If the interface receives a BPDU later, its<br>operation state changes to the non-port-fast state. By default,<br>this option is <b>Edge</b> . |

Click the **Apply** button to accept the changes made.

## ERPS

Ethernet Ring Protection Switching (ERPS) is a system for preventing Layer 2 loops in an Ethernet ring topology. One link between Ring Protection Link (RPL) nodes is blocked and un-blocked in the event of a link failure else where in the network. It uses G.8032 Ethernet Ring Protection (ERP) protocol, which is part ITU-T G.8032.

To view the following window, click **L2 Features > ERPS**, as shown below:

| ERPS                 |           |       |
|----------------------|-----------|-------|
| Ethernet Ring G.8032 |           |       |
| Ring Name            | 32 chars  | Apply |
| Ethe                 | rnet Ring |       |
|                      |           |       |
|                      |           |       |
|                      |           |       |

Figure 8-27 ERPS window

The fields that can be configured are described below:

| Parameter | Description                           |
|-----------|---------------------------------------|
| Ring Name | Enter the name of the ERPS ring here. |

Click the **Apply** button to accept the changes made.

When Add a ERPS ring:

To view the following window, click **L2 Features > ERPS**, as shown below:

| ERPS                 |            |  |
|----------------------|------------|--|
| Ethernet Ring G.8032 |            |  |
| Ring Name            | 32 chars   | Apply                                      |
| Ethe                 | ernet Ring |  |
|                      | 1          | Edit Ring Edit Instance show Status Delete |

The fields that can be configured are described below:

| Parameter | Description                           |
|-----------|---------------------------------------|
| Ring Name | Enter the name of the ERPS ring here. |

Click the **Apply** button to accept the changes made.

Click the **Delete** button to delete ERPS ring.

### **Ethernet Ring Settings**

This menu is accessible by clicking on the Edit Ring button on the ERPS page.

The fields that can be configured for Ethernet Ring Setting are described below:

| nernet Ring Settings |      |          |                                 |
|----------------------|------|----------|---------------------------------|
| Ethernet Ring Name   | 1    |          |                                 |
| Port0                | None | <b>T</b> |                                 |
| Port1                | None | T        |                                 |
|                      |      |          | < <back apply<="" td=""></back> |

Figure 8-29 Ethernet Ring Settings window

The fields that can be configured are described below:

| Parameter Description |                                      |
|-----------------------|--------------------------------------|
| Port0                 | Select one port from drop-down menu. |
| Port1                 | Select one port from drop-down menu. |

Click the **Apply** button to accept the changes made.

**Note**: The ERPS ring port must be in trunk or hybrid mode and must be configured before Ethernet Instance Settings can be configured.

### **Ethernet Instance Settings**

This menu is accessible by clicking on the Edit Instanc button on the ERPS page.

The fields that can be configured for Ethernet Ring Setting are described below:

| Edit Ethernet Instance      |                     |                                 |
|-----------------------------|---------------------|---------------------------------|
| Ethernet Instance Settings  |                     |                                 |
| Ethernet Ring Name          | 1                   |                                 |
| Description                 | Control             |                                 |
| R-APS Channel VLAN (1-4094) |                     |                                 |
| Inclusion VLAN List         | 3 or 2-5 💿 Add 💿 De | lete                            |
| MEL                         | 7                   |                                 |
| RPL Port                    | None 🔻              |                                 |
| RPL Owner                   | Disabled            |                                 |
| Activate                    | Disabled            |                                 |
|                             |                     | < <back apply<="" td=""></back> |

Figure 8-30 Ethernet Instance Settings window

The fields that can be configured are described below:

| Parameter                       | Description   |  |
|---------------------------------|---|--|
| Description                     | Use this to enter a description for the Ethernet Ring. This will be displayed on the ERPS Status Information page.  |  |
| R-APS Channel VLAN (1-<br>4094) | Enter the R-APS Channel VLAN of the ERPS ring for forwarding ERPS protocol messages, The value is range from 1 to 4094.   |  |
| Inclusion VLAN List             | Enter the Inclusion VLAN ID of the ERPS ring for protect<br>datagram. The value is range from 1 to 4094. This value can<br>set one or more vlans and optionally Add or Delete.<br>Note:This vlan cannot contain R-APS Channel VLAN. |  |
| MEL                             | Enter MEL values for the ERPS ring. The range is from 0 to 7. The default value is 7.   |  |
| RPL Port                        | Select to port0 or port1from drop-down menu.  |  |
| RPL Owner                       | Select the RPL Owner. Options to choose from are <b>Disabled</b> , <b>Owner</b> , and <b>Neighbor</b> .   |  |
| Activate                        | Select to enable or disable ERPS. The default is <b>Disabled</b> .  |  |

Click the **Apply** button to accept the changes made.

**Note:** Disable erps is required to change any parameter except Activate.

## **ERPS Status Information**

This menu is accessible by clicking on the **show Status** button on the ERPS page.

This fields that can be show ERPS Status Information:

| 1               |

# **Loopback Detection**

The Loopback Detection (LBD) function is used to detect the loop created by a specific port. This feature is used to temporarily shut down a port on the switch when a CTP (Configuration Testing Protocol) packet has been looped back to the switch. When the switch detects CTP packets received from a port, this signifies a loop on the network. The switch will automatically block the port and send an alert to the administrator. The Loopback Detection port will restart (change to normal state) when the Loopback Detection Recover Time times out. The Loopback Detection function can be implemented on a range of ports at a time. The user may enable or disable this function using the drop-down menu.

To view the following window, click **L2 Features > Loopback Detection**, as shown below:

| rap State           |            |                             |           |   |     |       |
|---------------------|------------|-----------------------------|-----------|---|-----|-------|

Figure 8-32 Loopback Detection window

The fields that can be configured for Loopback Detection Global Settings are described below:

| Parameter   | Description   |
|---|---|
| Loopback Detection State  | Select to enable or disable loopback detection. The default is <b>Disabled</b> .  |
| Trap State         Select to enable or disable the loopback detection           The default is Disabled.         The default is Disabled. |   |
| Enabled VLAN ID List  | This is the range of VLANs that Loopback Detection is enabled on. The range is from 1 to 4094. (Fill in when Mode is set to VLAN-based) |
| Action  | The action to perform when a CTP packet is detected on a port. The actions are as follows: <b>Shutdown:</b> shut the port down.         |

|                                  | None: perform no action.   |
|----------------------------------|--|
| Function Version                 | This is the version of Loopback Detection software running on the switch.  |
| Mode                             | This is the Loopback Detection mode running on the switch.<br>The modes are:   |
|                                  | <b>Port-based</b> : perform port-based Loopback Detection<br><b>VLAN-based</b> : perform VLAN-based Loopback Detection.  |
| Interval (1-32767)               | Set a Loop detection Interval between <i>1</i> and <i>32767</i> seconds.<br>The default is <i>10</i> seconds.  |
| Recover Time (0, 60-<br>1000000) | Time allowed (in seconds) for recovery when a Loopback is detected. The Loop Detection Recover Time can be set at 0 seconds, or 60 to 1000000 seconds. Entering 0 will disable the Loop Detection Recover Time. The default is 60 seconds. |
| Loopback address type            | Set a Loop detection packet use multicast or broadcast   |

Click the **Apply** button to accept the changes made.

The fields that can be configured for Loopback Detection Port Settings are described below:

| Parameter           | Description  |  |
|---------------------|--|--|
| From Port / To Port | Select the appropriate port range used for the configuration here. |  |
| State               | Select this option to enable or disable the state of the port.     |  |

Click the **Apply** button to accept the changes made.

**Note**: If Spanning Tree protocol is used, loopback detection will not be available. If Loopback Detection is enabled, the Spanning Tree protocol will not be available.

# Link Aggregation

#### Understanding Port Trunk Groups

Port trunk groups are used to combine a number of ports together to make a single high-bandwidth data pipeline.

Figure 8-33 Example of Port Trunk Group

The switch treats all ports in a trunk group as a single port. Data transmitted to a specific host (destination address) will always be transmitted over the same port in a trunk group. This allows packets in a data stream to arrive in the same order they were sent.

Link aggregation allows several ports to be grouped together and to act as a single link. This gives a bandwidth that is a multiple of a single link's bandwidth.

Link aggregation is most commonly used to link a bandwidth intensive network device or devices, such as a server, to the backbone of a network.

All of the ports in the group must be members of the same VLAN, and their STP status, static multicast, traffic control; traffic segmentation and 802.1p default priority configurations must be identical. Further, the LACP aggregated links must all be of the same speed and should be configured as full duplex.

Load balancing is automatically applied to the ports in the aggregated group, and a link failure within the group causes the network traffic to be directed to the remaining links in the group.

The Spanning Tree Protocol will treat a link aggregation group as a single link, on the switch level. On the port level, the STP will use the port parameters of the Master Port in the calculation of port cost and in determining the state of the link aggregation group. If two redundant link aggregation groups are configured on the switch, STP will block one entire group; in the same way STP will block a single port that has a redundant link.

**NOTE:** If any ports within the trunk group become disconnected, packets intended for the disconnected port will be load shared among the other linked ports of the link aggregation group.

This window is used to view and configure the link aggregation settings.

To view the following window, click L2 Features > Link Aggregation, as shown below:

| Link Aggregation         | _                     |                                  |                 |                        |

| Channel Group Informatio | n                     |                                  |                 |                        |
| From Port                | To Port               | Group ID                         | Mode            |                        |
|                          | · ·                   |                                  | On 🔻            | Add Delete Member Port |
| Note: Each Channel Gro   | up supports up to mem | ber ports. Up to Channel Groups. |                 |                        |
| Channel Group            | Protocol              | Max Ports Member Numb            | er Member Ports |                        |

Figure 8-34 Link Aggregation window

| Parameter           | Description  |  |  |
|---------------------|--|--|--|
| From Port / To Port | Select the appropriate port range used for the configuration here.   |  |  |
| Group ID            | Enter the channel group number here. The system will<br>automatically create the port-channel when a physical port<br>first joins a channel group. An interface can only join one<br>channel-group.  |  |  |
| Mode                | Select the mode option here. Options to choose from are <b>On</b> ,<br><b>Active</b> , and <b>Passive</b> . If the mode <b>On</b> is specified, the<br>channel group type is static. If the mode <b>Active</b> or <b>Passive</b> is<br>specified, the channel group type is LACP. A channel group<br>can only consist of either static members or LACP members.<br>Once the type of channel group has been determined, other<br>types of interfaces cannot join the channel group. |  |  |
|                     | <b>Active</b> - Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.                    |  |  |
|                     | <b>Passive</b> - LACP ports that are designated as passive cannot initially send LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, one end of the connection must have "active" LACP ports   |  |  |

The fields that can be configured for Channel Group Information are described below:

Click the Add button to add a new entry based on the information entered.

Click the **Delete Member Port** button to remove the specific member port.

Click the **Delete Channel** button to remove the specific entry.

Click the **Channel Detail** button to view more detailed information about the channel.

After clicking the **Channel Detail** button, the following page will be available.

| rt Channel Information   |                                       |                |                      |                         |

|                             |           |         |                  |
| D Snooping Mrouter Table -  |           |         |                  |

Figure 8-41 MLD Snooping Mrouter Settings

The fields that can be configured for IGMP Snooping Mrouter Settings are described below:

| Parameter           | Description  |
|---------------------|--|
| VID                 | Enter a VLAN ID of the multicast group.                            |
| From Port / To Port | Select the appropriate port range used for the configuration here. |

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

# **Multicast Filtering**

This window is used to view and configure the Layer 2 multicast filtering settings.

To view the following window, click **L2 Features > L2 Multicast Control > Multicast Filtering**, as shown below:

| Mult | ticast Filtering     |                      |                       |       |
|------|----------------------|----------------------|-----------------------|-------|
| Mult | ticast Filtering     |                      |                       |       |
| Mu   | ulitcast Filter Mode | Forward Unregistered | O Filter Unregistered | Apply |

Figure 8-42 Multicast Filtering window

The fields that can be configured are described below:

| Parameter             | Description  |
|-----------------------|--|
| Multicast Filter Mode | Select the multicast filter mode here. Options to choose from<br>are <b>Forward Unregistered</b> , and <b>Filter Unregistered</b> . When<br>selecting the <b>Forward Unregistered</b> option, registered<br>multicast packets will be forwarded based on the forwarding<br>table and all unregistered multicast packets will be flooded<br>based on the VLAN domain. When selecting the <b>Filter</b><br><b>Unregistered</b> option, registered packets will be forwarded<br>based on the forwarding table and all unregistered multicast<br>packets will be filtered. |

Click the **Apply** button to accept the changes made.

# LLDP

### **LLDP Global Settings**

LLDP (Link Layer Discovery Protocol) provides IEEE 802.1AB standards-based method for switches to advertise themselves to neighbor devices, as well as to learn about neighbor LLDP devices.

This window is used to configure the LLDP global settings.

To view the following window, click L2 Features > LLDP > LLDP Global Settings, as shown below:

| LLDP Global Settings |         |          |       |
|----------------------|---------|----------|-------|
| LLDP Global Settings |         |          |       |
| LLDP State           | Enabled | Disabled |       |
| LLDP Trap State      | Enabled | Disabled | Apply |

Figure 8-43 LLDP Global Settings window

The fields that can be configured for LLDP Global Settings are described below:

| Parameter       | Description  |
|-----------------|--|
| LLDP State      | Select this option to enable or disable the LLDP feature     |
| LLDP Trap State | Select this option to enable or disable the LLDP trap state. |

Click the Apply button to accept the changes made.

### **LLDP Neighbor Port Information**

This window is used to display the information learned from the neighbors. The switch receives packets from a remote station but is able to store the information as local.

To view the following window, click **L2 Features > LLDP > LLDP Neighbor Port Information**, as show below:

|     | LLDP Neighbor Port Information  |                    |            |                 |       |                  |  |
|-----|---|--------------------|------------|-----------------|-------|------------------|--|

# **DoS Attack Prevention Settings**

This window is used to view and configure the Denial-of-Service (DoS) attack prevention settings. The following well-known DoS types which can be detected by most switches:

- Land Attack: This type of attack involves IP packets where the source and destination address are set to the address of the target device. It may cause the target device to reply to itself continuously.
- **Blat Attack**: This type of attack will send packets with the TCP/UDP source port equal to the destination port of the target device. It may cause the target device to respond to itself.
- **TCP Null Scan:** This type of attack involves port scanning by using specific packets which contain a sequence number of 0 and no flags.
- **TCP Xmascan:** This type of attack involves port scanning by using specific packets which contain a sequence number of 0 and the Urgent (URG), Push (PSH), and FIN flags.
- **TCPSYN-FIN:** This type of attack involves port scanning by using specific packets which contain SYN and FIN flags.

- TCP SYN Src Port Less 1024: This type of attack involves port scanning by using specific packets which contain source port 0 to 1023 and SYN flag.
- **Ping Death Attack:** A ping of death is a type of attack on a computer that involves sending a malformed or otherwise a malicious ping to a computer. A ping is normally 64 bytes in size (many computers cannot handle a ping larger than the maximum IP packet size) which is 65535 bytes. The sending of a ping of this size can crash the target computer. Traditionally, this bug has been relatively easy to exploit. Generally, sending a 65536 byte ping packet is illegal according to networking protocol, but a packet of such a size can be sent if it is fragmented; when the target computer reassembles the packet, a buffer overflow can occur, which often causes a system crash.
- All Types: All of above types.

To view the following window, click **Security > DoS Attack Prevention Settings**, as shown below:

| S Attack Prevention Settings  |  |                                      |       |

| S  | SL Global Settings |           |                              |       |
|    | SSL Status         | O Enabled | <ul> <li>Disabled</li> </ul> | Apply |

Figure 10-4 SSL Global Settings window

The fields that can be configured for SSL Global Settings are described below:

| Parameter  | Description   |
|------------|---|
| SSL Status | Select to enable or disable the SSL feature's global status here. |

Click the **Apply** button to accept the changes made.

# 11. OAM

# **Cable Diagnostics**

The cable diagnostics feature is designed primarily for administrators or customer service representatives to verify and test copper cables; it can rapidly determine the quality of the cables and the types of error.

To view the following window, click **OAM > Cable Diagnostics**, as shown below:

| Cable Diagnostics |         |             |             |                  |           |
|-------------------|---------|-------------|-------------|------------------|-----------|
| Cable Diagnostics |         |             |             |                  |           |
| From Port         | To Port |             |             |                  |           |
| <b>T</b>          |         | •           |             |                  | Test      |
|                   |         |             |             |                  | Clear All |
| Port              | Туре    | Link Status | Test Result | Cable Length (M) |           |

Figure 11-1 Cable Diagnostics window

The fields that can be configured are described below:

| Parameter           | Description  |
|---------------------|--|
| From Port / To Port | Select the appropriate port range used for the configuration here. |

Click the **Test** button to test the specific port.

Click the Clear button to clear all the information for the specific port.

Click the Clear All button to clear all the information in this table.

**Note**: The Cable Diagnostics feature is only supported on the copper ports on all DGS-1100 MP/MPP Series switches.

# **12.** Monitoring

Statistics Mirror Settings

# **Statistics**

### **Port Counters**

This window is used to display port counter statistics.

To view the following window, click **Monitoring > Statistics > Port Counters**, as show below:

| Port Counters |          |       |      |                 |

# **Mirror Settings**

Mirror Session Table

This window is used to view and configure the mirror feature's settings. The switch allows users to copy frames transmitted and received on a port and redirect the copies to another port. Attach a monitoring device to the mirroring port, such as a sniffer, to view details about the packets passing through the first port. This is useful for network monitoring and troubleshooting purposes.

| Airror Settings |           |                          |            |   |
|-----------------|-----------|--------------------------|------------|---|
| Mirror Settings |           |                          |            |   |
|                 | Port      |                          |            |   |
| Destination     | eth 1     | <b>*</b>                 |            |   |

The fields that can be configured are described below:

| Parameter           | Description   |
|---------------------|---|
| From Port / To Port | Select the appropriate port range used for the configuration here.      |
| State               | Select this option to enable or disable the state of this feature here. |

Click the **Apply** button to accept the changes made.

**Note**: The EEE feature is only supported on the copper ports on all DGS-1100 MP/MPP Series switches.

# 14. ONVIF

Global Status IP-Camera Information NVR Information IP-Cameras Icon

# **Global Status**

ONVIF is a global standard for improving inter-operability between IP-based security products. It is an effort between various hardware and software vendors to define a specification for the exchange of information between physical security products. The DGS-1100 MP/MPP Series support the ONVIF protocol and its settings can be configured below.

The ONVIF Global Status page enables ONVIF support globally on the switch and allows you to configure ONVIF settings. It also displays global ONVIF statistics for the switch.

To view the following window, click **ONVIF > Global Status**, as shown below:

| ONVIF Global Status            |                       |       |
|--------------------------------|-----------------------|-------|
| ONVIF Global Settings          |                       |       |
| Global State                   | Enabled Isabled       |       |
| VLAN ID (2-4094)               | 2                     |       |
| VLAN CoS                       | 5 🔻                   |       |
| Discover Port (554,1025-65535) | 554                   |       |

Figure 14-2 IP-Camera Information window

### **IPC Settings**

This menu is accessible by clicking on the Edit button on the IP-Camera Information page.

| PC Settings |                   |                                 |
|-------------|-------------------|---------------------------------|
| PC Settings |                   |                                 |
| Port        | 2                 |                                 |
| IP Address  | 10.90.90.202      |                                 |
| IPC State   | Disabled <b>T</b> |                                 |
| Description |                   |                                 |
|             |                   | < <back apply<="" td=""></back> |

Figure 14-3 IPC Settings window

The fields that can be configured for IPC Settings are described below:

| Parameter   | Description  |
|-------------|--|
| IPC State   | Select the state of the IP-Camera, either <b>Enabled</b> or <b>Disabled</b> .                                |
| Description | Use this to enter a description for the IP-Camera. This will be displayed on the IP-Camera Information page. |

Click the **Apply** button to accept the changes made.

# **NVR Information**

This is a list of the NVR devices that have been detected in the ONVIF VLAN. The switch port, IP address of the device, the number of IP-Cameras connected, throughput, group number, and port description. A group number will be assigned if multiple ONVIF devices have been recognized on a port.

To view the following window, click ONVIF > NVR Information, as shown below:

| formatio   | n                         |                 |                      |                  |                     |          |      |
|------------|---------------------------|-----------------|----------------------|------------------|---------------------|----------|------|
| Entries    | Discovered: 2             |                 |                      |                  |                     |          |      |
|            |                           |                 |                      |                  |                     |          |      |
| Port       | IP Address                | IPC Number      | Throughput           | Group            | Description         |          |      |

| Parameter   | Description   |
|-------------|---|
| Description | Edit this by pressing the <b>Edit</b> button next to the entry in the table. This is the description for the NVR that has been detected as being connected to the port. |

The fields that can be configured for NVR Information are described below:

Click the **Apply** button to accept the changes made.

# **IP-Camera Icon**

Click menu ONVIF >IP-Camera Icon, as shown below, to customize IP-camera icons. You can either backup or upload your icons into the switch.

To view the following window, click **ONVIF > IP-Camera Icon**, as shown below:

| Upload/Backup All Icons       |   |       |
|-------------------------------|---|-------|
| Backup                        |   |       |
| OUpload                       | Choose File No file chosen  | Apply |
| Note: Please click the save b | utton of tool bar after upload IPC icons, or missing them when reboot system.                               |       |
| IP-Camera Icon Settings       |   |       |
| Model Name                    |   |       |
| Upload Icon File              | Choose File No file chosen  | Add   |
| Note: Please click the save b | utton of tool bar after add/delete IPC icons, or missing them when reboot system. Please use lowercase word | • ·   |
| Total Entries: 0 /100         |   |       |
| Total Entries. 07100          |   |       |

#### Figure 14-4 IP-Camera Icon window

The fields that can be configured for IP-Camera Icon are described below:

| Parameter        | Description                         |
|------------------|-------------------------------------|
| Backup           | Backup the icon to local            |
| Upload           | Upload the local icon to the switch |
| Model Name       | You can name the IP-Camera Icon     |
| Upload Icon File | Upload files                        |

Click **Apply** to make the configurations take effect.

# **15. Save and Tools**

Save Configuration Firmware Information Firmware Upgrade & Backup Configuration Restore & Backup Log Backup Ping Reset Reboot System

# **Save Configuration**

This window is used to save the running configuration to the start-up configuration of the switch. This is to prevent the loss of configuration in the event of a power failure.

To view the following window, click **Save > Save Configuration**, as shown below:

| Save Configuration  |       |
|---|-------|
| Save Configuration  |       |
| Please press the "Apply" button to save system settings to flash. | Apply |
|   |       |

#### Figure 15-1 Save Configuration window

Click the Apply button to save the configuration to the switch's flash memory.

# **Firmware Information**

This window is used to show firmware information.

To view the following window, click Tools > Firmware Information, as shown below:

| Image ID | Version | Size (B) | Update Time         |         |
|----------|---------|----------|---------------------|---------|
| 1        | 2.00.05 | 7982992  | 2000-01-01 21:58:50 | Boot UP |
| *2c      | 2.00.05 | 7982992  | 2000-01-01 22:25:27 | Boot UP |

Figure 15-2 Firmware Information window

**Boot Up:** Clicking the **Boot Up** button will set that firmware image as the active image to use upon the next system start up.

**Note**: Changing the firmware only happens after the switch has been manually rebooted. In order to boot with the newly selected firmware, make sure that the switch is rebooted.

# **Firmware Upgrade & Backup**

**Note:** When upgrading the firmware on the DGS-1100 MP/MPP Series switch, only the image not currently active can be upgraded. All DGS-1100 MP/MPP Series switches come with two images, however only one can be active at any time. (e.g. If image 1 is currently in use, only image 2 can be upgraded, and vice versa.)

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

### Firmware Upgrade from HTTP

This window is used to initiate a firmware upgrade from a local PC using HTTP.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Upgrade from HTTP**, as shown below:

| Firmware Upgrad | de from HTTP               |       |
|-----------------|----------------------------|-------|
| Source File     | Choose File No file chosen |       |
| Destination     | Image 1                    |       |
|                 |                            | Apply |
| 1. C            |                            |       |

Figure 15-3 Firmware Upgrade from HTTP window

The fields that can be configured are described below:

| Parameter   | Description   |
|-------------|---|
| Source File | Enter the source filename and path of the firmware file<br>located on the local PC. Alternatively click the <b>Choose File</b><br>button to navigate to the location of the firmware file located<br>on the local PC. |

Click the **Apply** button to initiate the firmware upgrade.

### Firmware Upgrade from TFTP

This window is used to initiate a firmware upgrade from a TFTP server.

To view the following window, click **Tools > Firmware Upgrade & Backup > firmware Upgrade from TFTP**, as shown below:

| Firmware Upgrade from TFT | 2        |         |
|---------------------------|----------|---------|
|                           |          |         |
| TFTP Server IP            | · · · ·  |         |
| Source File               | 64 chars |         |
| Destination               | Image 2  |         |
|                           |          | Upgrade |

Figure 15-4 Firmware Upgrade from TFTP window

The fields that can be configured are described below:

| Parameter      | Description  |
|----------------|--|
| TFTP Server IP | Enter the TFTP server's IPv4 address here.   |
| Source File    | Enter the source filename and path of the firmware file located on the TFTP server here. |

Click the **Upgrade** button to initiate the firmware upgrade.

### **Firmware Backup to HTTP**

This window is used to initiate a firmware backup to a local PC using HTTP.

# To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to HTTP**, as shown below:

|       |     | Backup | Firmware Bacl |
|-------|-----|--------|---------------|
|       | 1 🔻 |        | Source        |
| Apply |     |        | rs.           |
|       |     |        | r.            |

Figure 15-5 Firmware Backup to HTTP window

The fields that can be configured are described below:

| Parameter | Description   |
|-----------|---|
| Source    | Select the source image to use for the firmware backup. |

Click the **Apply** button to initiate the firmware backup.

### **Firmware Backup to TFTP**

This window is used to initiate a firmware backup to a TFTP server.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to TFTP**, as shown below:

| Firmware Backup to TFTP |          |        |
|-------------------------|----------|--------|
|                         |          |        |
| TFTP Server IP          |          |        |
| Source                  | Image1   |        |
| Destination File        | 64 chars |        |
|                         |          | Backup |

Figure 15-6 Firmware Backup to TFTP window

The fields that can be configured are described below:

| Parameter        | Description  |  |
|------------------|--|--|
| TFTP Server IP   | Enter the TFTP server's IPv4 address here.   |  |
| Source           | Select the source image to use for the firmware backup.  |  |
| Destination File | Enter the destination path and location where the firmware file should be stored on the TFTP server. |  |

Click the **Backup** button to initiate the firmware backup.

# **Configuration Restore & Backup**

### **Configuration Restore from HTTP**

This window is used to initiate a configuration restore from a local PC using HTTP.

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from HTTP**, as shown below:

| Configuration Re    | store from HTTP         |   | _        |
|---------------------|-------------------------|---|----------|
| Source File         | Choose File             | No file chosen                            |          |
|                     |                         |   |          |
| Effective immediate | ly (running-config) 🛛 🔘 | Take effect after the next boot (startup- | -config) |

Figure 15-7 Configuration Restore from HTTP window

The fields that can be configured are described below:

| Parameter   | Description   |
|-------------|---|
| Source File | Enter the source filename and path of the configuration file<br>located on the local PC. Alternatively click the <b>Choose File</b><br>button to navigate to the location of the configuration file<br>located on the local PC. |

Click the **Apply** button to initiate the configuration restore.

Click **Effective immediately (running-config)** to have the uploaded configuration loaded immediately.

Click **Take effect after the next boot (startup-config)** to load the configuration after the switch has been rebooted.

### **Configuration Restore from TFTP**

This window is used to initiate a configuration restore from a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from TFTP**, as shown below:

| Configuration Restore from TF                              | TP   |  |
|--|--|--|
|  |  |  |
| TFTP Server IP   | · · ·  |  |
| Source File  | 64 chars   |  |
| <ul> <li>Effective immediately (running-config)</li> </ul> | <ul> <li>Take effect after the next boot (startup-config)</li> </ul> |  |
|  | Restore  |  |

#### Figure 15-8 Configuration Restore from TFTP window

The fields that can be configured are described below:

| Parameter      | Description  |
|----------------|--|
| TFTP Server IP | Enter the TFTP server's IPv4 address here.                   |
| Source File    | Enter the source filename and path of the configuration file |

located on the TFTP server here.

Click the **Restore** button to initiate the configuration restore.

Click **Effective immediately (running-config)** to have the uploaded configuration loaded immediately.

Click **Take effect after the next boot (startup-config)** to load the configuration after the switch has been rebooted.

### **Configuration Backup to HTTP**

This window is used to initiate a configuration file backup to a local PC using HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to HTTP**, as shown below:

| Configuration Backup to HT | TP                               |  |
|----------------------------|----------------------------------|--|
| Include username password  | Exclude username password Backup |  |

Figure 15-9 Configuration Backup to HTTP window

Select **Include username password** to save the switch configuration with user accounts and passwords to the backup file.

Select **Exclude username password** to save the switch configuration without user accounts and passwords to the backup file.

Click the **Backup** button to initiate the configuration file backup.

### **Configuration Backup to TFTP**

This window is used to initiate a configuration file backup to a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to TFTP**, as shown below:

| Configuration Backup to T   | TP       |        |
|---|----------|--------|
| TFTP Server IP<br>Destination File<br>Include Username Password ( | 64 chars | Backup |

Figure 15-10 Configuration Backup to TFTP window

The fields that can be configured are described below:

| Parameter        | Description   |
|------------------|---|
| TFTP Server IP   | Enter the TFTP server's IPv4 address here.  |
| Destination File | Enter the destination path and location where the configuration file should be stored on the TFTP server. |

Select **Include username password** to save the switch configuration with user accounts and passwords to the backup file.

Select **Exclude username password** to save the switch configuration without user accounts and passwords to the backup file.

Click the **Backup** button to initiate the configuration file backup.

# Log Backup

### Log Backup to HTTP

This window is used to initiate a system log backup to a local PC using HTTP.

To view the following window, click **Tools > Log Backup > Log Backup to HTTP**, as shown below:

| Log Backup to HTTP |       |
|--------------------|-------|
| Log Backup to HTTP |       |
|                    | Apply |
| 1                  |       |

Figure 15-11 Log Backup to HTTP window

Click the **Apply** button to initiate the system log backup.

### Log Backup to TFTP

This window is used to initiate a system log backup to a TFTP server.

To view the following window, click Tools > Log Backup > Log Backup to TFTP, as shown below:

| Log Backup to TFTP                 |          |        |
|------------------------------------|----------|--------|
| TFTP Server IP<br>Destination File | 64 chars | Backup |

Figure 15-12 Log Backup to TFTP window

The fields that can be configured are described below:

| Parameter        | Description  |
|------------------|--|
| TFTP Server IP   | Enter the TFTP server's IPv4 address here.   |
| Destination File | Enter the destination path and location where the configuration file should be stored on the TFTP server |

Click the **Backup** button to initiate the system log backup.

# Ping

Ping is a small program that sends ICMP Echo packets to the IP address you specify. The destination node then responds to or "echoes" the packets sent from the switch. This is very useful to verify connectivity between the switch and other nodes on the network.

To view the following window, click **Tools > Ping**, as shown below:

| ✓ Infinite |       |
|------------|-------|
| 4 sec      |       |
|            | Start |
|            |       |

Figure 15-13 Ping window

The fields that can be configured for IPv4 Ping are described below:

| Parameter           | Description  |  |
|---------------------|--|--|
| Target IPv4 Address | Select and enter an IP address to be pinged.   |  |
| Ping Times          | Enter the number of times desired to attempt to Ping the IPv4<br>address configured in this window. Users may enter a<br>number of times between 1 and 255. Tick the <b>Infinite</b> check<br>box to keep sending ICMP Echo packets to the specified IP<br>address until the program is stopped. |  |
| Timeout             | Select a timeout period between 1 and 99 seconds for this<br>Ping message to reach its destination. If the packet fails to<br>find the IP address in this specified time, the Ping packet will<br>be dropped.  |  |

After clicking the **Start** button in **IPv4 Ping** section, the following **IPv4 Ping Result** section will appear:

| 1] reply from 192.168.100.129: time=10.0 ms |  |
|---|--|
| 2] reply from 192.168.100.129: time=0.0 ms  |  |
| 3] reply from 192.168.100.129: time=10.0 ms |  |
| 4] reply from 192.168.100.129: time=0.0 ms  |  |
| 5] reply from 192.168.100.129: time=0.0 ms  |  |
| 6] reply from 192.168.100.129: time=0.0 ms  |  |
| 7] reply from 192.168.100.129: time=0.0 ms  |  |
| Ping Statistics for 192.168.100.129         |  |
| Packets: Sent =7, Received =7, Lost =0      |  |
|   |  |

Figure 15-14 Ping - IPv4 Ping Result window

Click the Stop button to halt the Ping Test.

Click the **Back** button to return to the IPv4 Ping section.

# Reset

This window is used to reset the switch's configuration to the factory default settings.

To view the following window, click **Tools > Reset**, as shown below:

| Reset  |       |
|--|-------|
| Reset  |       |
| The Switch will be reset to its factory defaults including IP address, and then will save, reboot. |       |
| The Switch will be reset to its factory defaults except IP address, and then will save, reboot.    |       |
| The Switch will be reset to its factory defaults including IP address.                             |       |
| Note: All configurations take effect after reboot.   | Apply |

Figure 15-15 Reset window

Select The Switch will be reset to its factory defaults including IP address and stacking information, and the will save, reboot option to reset the switch's configuration to its factory default settings.

Select **The Switch will be reset to its factory default except IP address, and then will save, reboot** option to reset the switch's configuration to its factory default settings. This option will exclude the IP address from being changed.

Select **The Switch will be reset to its factory defaults including IP address** option to reset the switch's configuration to its factory default settings.

Click the Apply button to initiate the factory default reset and reboot the switch.

**NOTE:** Performing a factory reset in one version of the interface (Standard Mode or Surveillance Mode) will cause settings to be reset in the other version of the interface.

# **Reboot System**

This window is used to reboot the switch and alternatively save the configuration before doing so. To view the following window, click **Tools >Reboot System**, as shown below:

| Reboot |
|--------|
|        |
|        |

Figure 15-16 Reboot System window

When rebooting the switch, any configuration changes that was made during this session, will be lost unless the **Yes** option is selected when asked to save the settings.

Click the Reboot button to alternatively save the settings and reboot the switch.

| the settings ? | e Yes 🔿 No                               | × |
|----------------|--|---|
| Reboot         |  |   |

# **16. Appendix A - Ethernet Technology**

This chapter will describe the features of the D-Link DGS-1100 MP/MPP Series switch and provide some background information about Ethernet/Fast Ethernet/Gigabit Ethernet switching technology.

# **Gigabit Ethernet Technology**

Gigabit Ethernet is an extension of IEEE 802.3 Ethernet utilizing the same packet structure, format, and support for CSMA/CD protocol, full duplex, and management objects, but with a tenfold increase in theoretical throughput of over 100-Mbps Fast Ethernet and a hundredfold increase over 10-Mbps Ethernet. Since it is compatible with all 10-Mbps and 100-Mbps Ethernet environments, Gigabit Ethernet provides a straightforward upgrade without wasting existing investments in hardware, software, or trained personnel.

The increased speed and extra bandwidth offered by Gigabit Ethernet is essential to help solving network bottlenecks that frequently develop as more advanced computer users and newer applications continue to demand greater network resources. Upgrading key components, such as backbone connections and servers to Gigabit Ethernet technology can greatly improve network response times as well as significantly speed up the traffic between subnets.

Gigabit Ethernet enables fast optical fiber connections to support video conferencing, complex imaging, and similar data-intensive applications. Likewise, since data transfers occur 10 times faster than Fast Ethernet, servers outfitted with Gigabit Ethernet NIC's are able to perform 10 times the number of operations in the same amount of time.

In addition, the phenomenal bandwidth delivered by Gigabit Ethernet is the most cost-effective method to take advantage of today and tomorrow's rapidly improving switching and routing internetworking technologies. And with expected advances in the coming years in silicon technology and digital signal processing that will enable Gigabit Ethernet to eventually operate over unshielded twisted-pair (UTP) cabling, outfitting your network with a powerful 1000-Mbps-capable backbone/server connection which will create a flexible foundation for the next generation of network technology products.

# **Fast Ethernet Technology**

The growing importance of LANs and the increasing complexity of desktop computing applications are fueling the need for high performance networks. A number of high-speed LAN technologies have been proposed to provide greater bandwidth and improve client/server response times. Among them, 100BASE-T (Fast Ethernet) provides a non-disruptive, smooth evolution from the current 10BASE-T technology. The non-disruptive and smooth evolution nature, and the dominating potential market base, virtually guarantees cost-effective and high performance Fast Ethernet solutions.

100Mbps Fast Ethernet is a standard specified by the IEEE 802.3 LAN committee. It is an extension of the 10Mbps Ethernet standard with the ability to transmit and receive data at 100Mbps, while maintaining the CSMA/CD Ethernet protocol. Since the 100Mbps Fast Ethernet is compatible with all other 10Mbps Ethernet environments, it provides a straightforward upgrade and utilizes existing investments in hardware, software, and personnel training.

# **Switching Technology**

Another approach to push beyond the limits of Ethernet technology is the development of switching technology. A switch bridges Ethernet packets at the MAC address level of the Ethernet protocol transmitting among connected Ethernet or Fast Ethernet LAN segments.

Switching is a cost-effective way of increasing the total network capacity available to users on a local area network. A switch increases capacity and decreases network loading by dividing a local area network into different segments which won't compete with each other for network transmission capacity.

The switch acts as a high-speed selective bridge between the individual segments. The switch, without interfering with any other segments, automatically forwards traffic that needs to go from one segment to another. By doing this the total network capacity is multiplied, while still maintaining the same network cabling and adapter cards.

# **17. Appendix B - Technical Specifications**

# Hardware **Specifications**

# Key Components / Performance

Switching Capacity: -DGS-1100-10MP: 20Gbps

- DGS-1100-10MPP: 20Gbps
- DGS-1100-26MP: 52Gbps
- DGS-1100-26MPP: 52Gbps
- Max. Forwarding Rate: -DGS-1100-10MP: 14.88Mpps
  - DGS-1100-10MPP: 14.88Mpps
  - DGS-1100-26MP: 38.69Gbps
  - DGS-1100-26MPP: 38.69Gbps
  - Forwarding Mode: Store and Forward
- Packet Buffer memory:

- DGS-1100-10MP: 4.1Mbits
- DGS-1100-10MPP: 4.1Mbits
- DGS-1100-26MP: 4.1Mbits
- DGS-1100-26MPP: 4.1Mbits
- Flash Memory: 32M Byte

### Port Functions

- 10/100/1000BaseTX ports compliant with the following standards:
  - IEEE 802.3
  - IEEE 802.3u
  - IEEE 802.3ab
  - IEEE802.3at
  - IEEE802.3af
  - IEEE802.3bt (DGS-1100 MPP Series only)
  - -Supports Full/half-Duplex operations at 10/100Mbps
  - -Supports Full-Duplex operation at 1000Mbps
  - -Supports IEEE 802.3x Flow Control
  - -Support Auto-Negotiation
  - -Compliant to IEEE 802.3az Energy Efficiency Ethernet.
- SFP ports compliant with the following standards:
  - IEEE 802.3u compliance
  - IEEE 802.3z compliance

### **Physical &** Environment

Maximum Power Consumption - DGS-1100-10MP: 10.79W (POE OFF) 154.00W (POE ON) - DGS-1100-10MPP: 11.68W (POE OFF) 285.50W (POE ON) - DGS-1100-26MP: 23.58W (POE OFF) 434.40W (POE ON) - DGS-1100-26MPP: 24.67W (POE OFF) 616.90W (POE ON) Standby Power Consumption - DGS-1100-10MP: 4.25W - DGS-1100-10MPP: 5.95W - DGS-1100-26MP: 12.6W - DGS-1100-26MPP: 13.89WPower input:100~240 VAC, 50/60Hz, internal universal power supply Acoustic Value: - DGS-1100-10MP: 51.9 dB - DGS-1100-10MPP: 51.9 dB - DGS-1100-26MP: 53.7 dB - DGS-1100-26MPP: 53.7 dB Operation Temperature: -10~55°C ⊳ > Storage Temperature: -20~70°C > Operation Humidity: 0%~95% RH 6 Storage Humidity: 0%~95% RH **Emission (EMI)** Certifications FCC class A CE Class A ∢ VCCI Class A BSMI > CCC Safety Certifications CUL, LVD, CB, CCC, BSMI Features L2 Features

- 8K MAC address >

# **L2 Multicasting**

IGMP Snooping

### VLAN

- 802.1Q VLAN standard
- Port-Based VLAN
- Surveillance VLAN
- Voice VLAN:
- Asymmetric VLAN

# Quality of Service (QoS)

- > 802.1p priority
- 4 queues
- Bandwidth Control

### Security

- Storm Control
- DoS Attack Prevention
- SSL
- D-Link Safeguard

### Management

- Web-based GUI or D-Link Network Assistant
- Configuration backup/restoration via Webbased management
- Firmware backup &upgrade via Webbased management
- Reset, Reboot system
- Factory reset by pressing reset button
- SNMP, LLDP, Dual Image, 2 level user account, SNTP

### **Power Saving**

- IEEE 802.3az Compliant (Energy Efficient Ethernet)
- D-Link Green Technologies
   Power saving by link status
  - Power Saving by LED Shut-Off
  - Power Saving by Port Shut-Off
  - Power Saving by System Hibernation

# **Surge Protection**

 All PoE ports support 2KV surge protection

# **18. Appendix C – Rack mount Instructions**

Safety Instructions - Rack Mount Instructions - The following or similar rack-mount instructions are included with the installation instructions:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips)
