2.3.1 Link Aggregation.....	11
2.3.2 802.1x Authentication.....	12
2.3.3 Layer 3	15
2.3.4 Port Configuration.....	18
2.3.5 VLAN.....	29
2.3.6 MAC Learning & Forwarding	35
2.3.7 Spanning Tree Protocol (STP)	37
2.3.8 Policer.....	48
2.3.9 ACL.....	52
2.3.10 Shaper	58
2.3.11 Queue & Scheduler	60
2.3.12 Storm Control.....	63
2.3.13 IGMP.....	70
2.4 Status.....	80
2.4.1 Front Panel	80
2.4.2 Alarm/Event	81
2.4.3 Fdb.....	83
2.4.4 Giga Port Statistics.....	84

2.4.5 RMON.....	86
2.4.6 Users.....	88
2.4.7 Ring Protection Status.....	89
2.4.8 802.1x.....	90
2.4.9 IGMP.....	95
2.5 Maintenance	97
2.5.1 Restart	97
2.5.2 Save & Restore	98
2.5.3 Firmware	100
2.5.4 Alarm Profile	102
2.5.5 CLI Options	104
2.5.6 HTTP (HTTPS)	105
2.5.7 SLL (new)	106
2.5.8 SNTP	107
2.5.9 Syslog.....	108
2.5.10 User Administration	109
2.5.11 SNMP.....	111

1. Introductions

1.1 System Description

DIS-700G-28XS Industrial Managed switches deliver high quality, wide operating temperature range, extended power input range, IP-30 design, and advanced VLAN & QoS features. It's ideal for harsh environments and mission critical applications.

DIS-700G-28XS Industrial Managed switches provides enterprise-class networking features to fulfill the needs of large network infrastructure and extreme environments.

DIS-700G-28XS Industrial Managed switches ease the effort to build a network infrastructure which offers a reliable, well managed and good QoS networking for any business requiring continuous and well-protected services in industrial environments. With the features such as Fast Failover ring protection and QoS, customers can ensure their network is qualified to deliver any real-time and high quality applications.

1.2 Using the Web Interface

The object of this document “DIS-700G-28XS WebGUI User Manual” is to address the web feature, design layout and describe how to use the web interface.

1.2.1 Web Browser Support

IE 7 (or newer version) with the following default settings is recommended:

Language script	Latin based
Web page font	Times New Roman
Plain text font	Courier New
Encoding	Unicode (UTF-8)
Text size	Medium

Firefox with the following default settings is recommended:

Web page font	Times New Roman
Encoding	Unicode (UTF-8)
Text size	16

Google Chrome with the following default settings is recommended:

Web page font	Times New Roman
Encoding	Unicode (UTF-8)
Text size	Medium

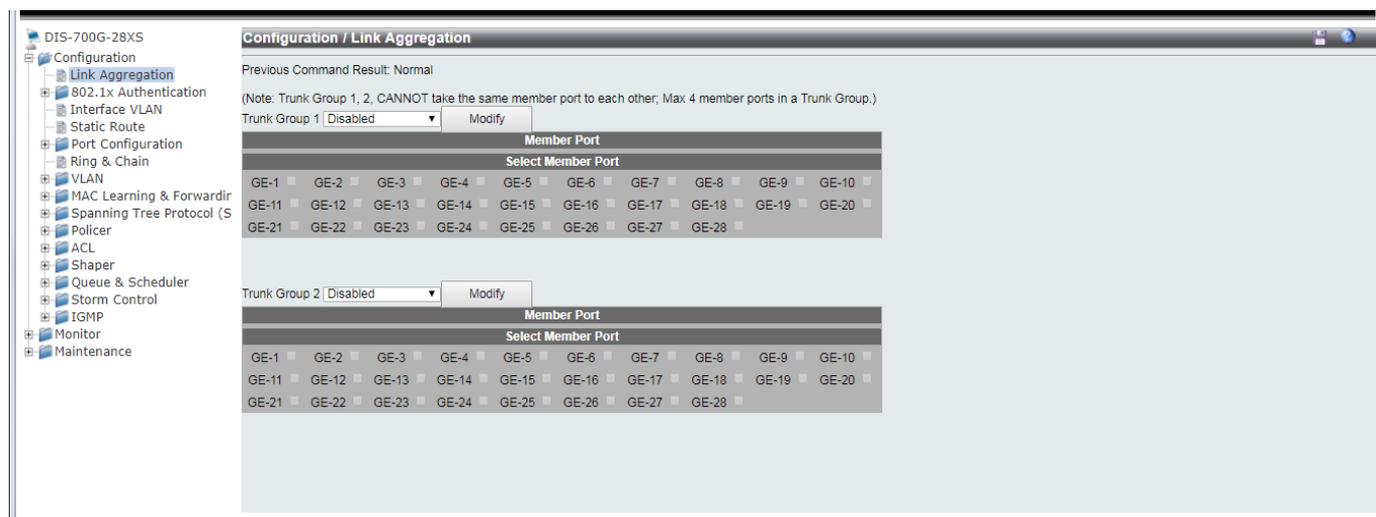

1.2.2 Navigation

All main screens of the web interface can be reached by clicking on hyperlinks in the four menu boxes on the left side of the screen:

- **Status** - Display statistics, status, and contents of memory.
- **Configuration** - Configure the system, interfaces, and filters.
- **System** - Display system information, download firmware, back up configurations, and modify users.

You can find the detailed information in section 2.2 Tree View.

1.2.3 Title Bar Icons

Help Button

For more information about any screen, click on the Help button on the screen.

Help information is displayed in the same window.

Save Button

If any unsaved change has been made to the *configuration* (by you during this or a prior session, or by any other administrator using the web interface or the Command Line Interface), a Save icon appears in the title line. To save the running configuration to the startup configuration:

1. Click on the Save icon. The System/Save and Restore screen appears.
2. Click on Submit next to Data Control Action drop-down list on top of System/Save and Restore screen.

1.2.4 Ending a Session

To end a session, close your web browser. This prevents an unauthorized user from accessing the system using your user name and password.

1.3 Using the Online Help

Each screen has a  Help button that invokes a page of information relevant to the particular screen. The Help is displayed in a new window.

Each web page of Configuration/Status/System functions has a corresponding help page.

2. Using the Web

2.1 Login

DIS-700G-28XS Web Interface Login

Username:

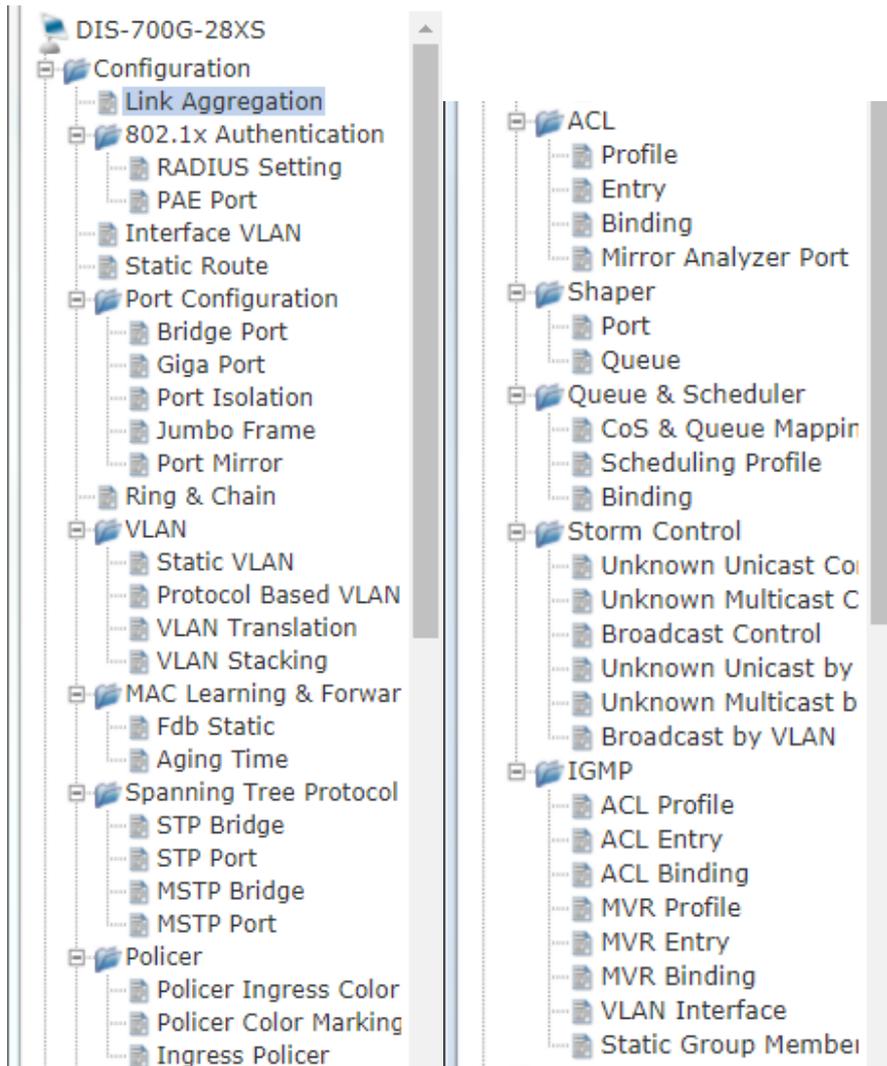

Password:

Operation	1. Fill Username and Password 2. Click "Sign in"
Field	Description
Username	Login user name. The maximum length is 32. Default: admin
Password	Login user password. The maximum length is 32. Default: admin

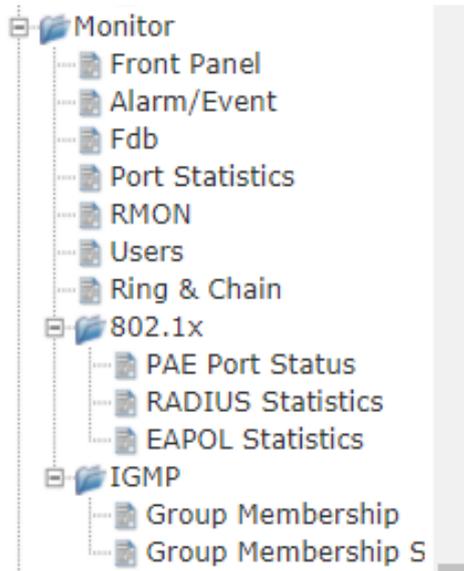

2.2 Tree View

The tree view is a menu of the web. It offers user quickly to get the page for expected data or configuration.

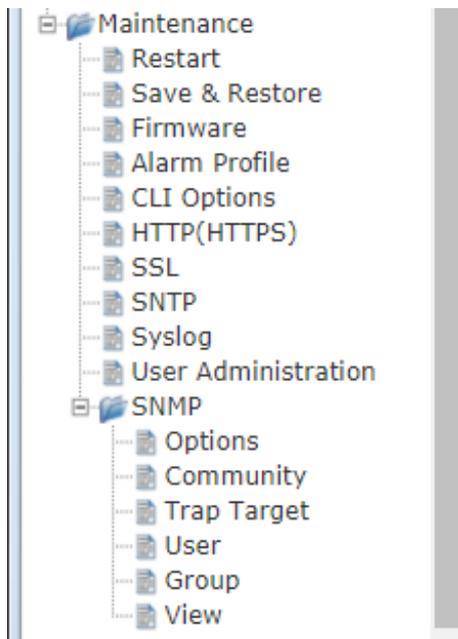

2.2.1 Configuration Menu

2.2.2 Monitor Menu

2.2.3 Maintenance Menu

2.3 Configuration

2.3.1 Link Aggregation

Configuration / Link Aggregation

Previous Command Result: Normal

(Note: Trunk Group 1, 2, CANNOT take the same member port to each other; Max 4 member ports in a Trunk Group.)

Trunk Group 1

Member Port

Select Member Port

GE-1 GE-2 GE-3 GE-4 GE-5 GE-6 GE-7 GE-8 GE-9 GE-10
 GE-11 GE-12 GE-13 GE-14 GE-15 GE-16 GE-17 GE-18 GE-19 GE-20
 GE-21 GE-22 GE-23 GE-24 GE-25 GE-26 GE-27 GE-28

Trunk Group 2

Member Port

Select Member Port

GE-1 GE-2 GE-3 GE-4 GE-5 GE-6 GE-7 GE-8 GE-9 GE-10
 GE-11 GE-12 GE-13 GE-14 GE-15 GE-16 GE-17 GE-18 GE-19 GE-20
 GE-21 GE-22 GE-23 GE-24 GE-25 GE-26 GE-27 GE-28

Operation	<p><u>Modify:</u></p> <ol style="list-style-type: none"> Select port with check box from GE-1 ~ GE-xx (xx could be 10/28). Click Modify button.
Field	Description
Trunk Group	<p>Trunk Group number.</p> <p><u>Note:</u></p> <p>Trunk Group 1 & 2 CANNOT take the member port that is already assigned to another Trunk Group; Max 4 member ports in a Trunk Group. Otherwise, the modification would be failed.</p>
Member Port	Display current member port of Trunk Group.
Mode	To enable/disable Link Aggregation for Trunk Group.
Select Member Port	To select member ports for Trunk Group. If Link Aggregation mode is disabled, then the member port would be cleared, that represents no member port is assigned to Trunk Group.

2.3.2 802.1x Authentication

2.3.2.1 RADIUS Setting

Configuration / 802.1x / RADIUS Setting Related: [RADIUS Statistics](#)

Modify

Previous Command Result: Normal

Server IP	0 . 0 . 0 .
Auth Port	1812
Secret Key	

Operation	<p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Modify Server IP, Authentication Port and Secret Key fields. 2. Click "Modify" button to apply change.
Field	Description
Server IP	<p>The IP address of RADIUS server.</p> <p>Allow IPv4 address. 0.0.0.0 means disable RADIUS.</p> <p>Default is 0.0.0.0.</p>
Auth Port	<p>The UDP port of RADIUS server for authentication.</p> <p>Range 1~65535.</p> <p>Default is 1812.</p>
Secret Key	<p>The key to be used between RADIUS server and Authenticator.</p> <p>Range 0~16 chars.</p> <p>Default is empty string.</p>

2.3.2.2 PAE Port Authentication

Configuration / 802.1x / PAE Port Authentication
 Previous Command Result: Normal Related: [PAE Port Status](#) [EAPOL Statistics](#)

System AuthControl: Disabled

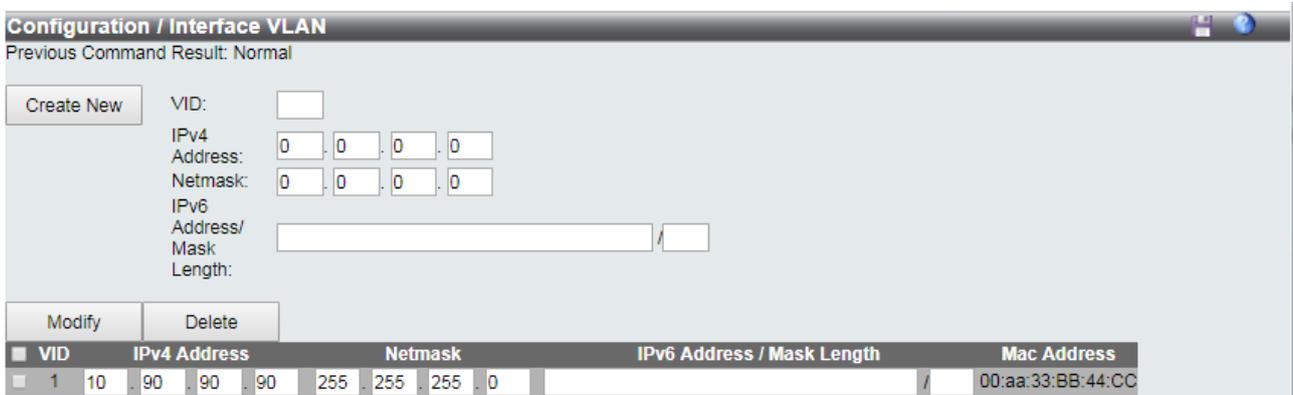

Port	Auth Control	ReAuth Enabled	ReAuth Period(sec)	Quiet Period(sec)	Tx Period(sec)	Supp. Timeout(sec)	Server Timeout(sec)	Max Request
<input type="checkbox"/> 1	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 2	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 3	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 4	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 5	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 6	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 7	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 8	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 9	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 10	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 11	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 12	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 13	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 14	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 15	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 16	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 17	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 18	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 19	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 20	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 21	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 22	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 23	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 24	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 25	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 26	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 27	Force_Authorized	Disabled	3600	60	30	30	30	2
<input type="checkbox"/> 28	Force_Authorized	Disabled	3600	60	30	30	30	2

Operation	<p><u>Modify System Auth. Control:</u></p> <ol style="list-style-type: none"> 1. Select System Auth. Control. 2. Click "Modify" button to apply change. <p><u>Modify PAE Port Authentication:</u></p> <ol style="list-style-type: none"> 1. Update below fields. 2. Check up the port(s) to be changed. <p>Click "Modify" button to modify PAE Port Authentication options.</p>
Field	Description
System AuthControl	<p>Enable/Disable system 802.1x authentication function.</p> <p>Default value is Disabled.</p>

Port	PAE port: 1 ~ MAX Number of Port.
Auth Control	The authentication type of PAE port. Allow Force_Unauthorized/Force_Authorized/Auto. Default is Force_Authorized.
ReAuth Enabled	Enable/Disable re-authenticate of PAE port. Default is Disable.
ReAuth Period	The period of re-authenticant of PAE port. Range 1~3600 sec. Default is 3600 sec.
Quiet Period	The quiet period of PAE port. Range 1~255 sec. Default is 60 sec.
Tx Period	The timeout of authenticator waiting for EAP-Response/ Identity from supplication of PAE port. Range 1~255 sec. Default is 30 sec.
Supp. Timeout	The timeout of authenticator wait for EAP-Response (exclude EAP-Request/Identify) after sending EAP-Request. Range 1~255 sec. Default is 30 sec.
Server Timeout	The timeout time of Authenticator wait Access-Challenge/ Access-Accept/ Access-Reject after sending Access-Request. Range 1~255 sec. Default is 30 sec.
Max Request	The max times of backend Authenticator send EAP-Request to supplicant before restarting the authentication process. Range 1~10. Default is 2.

2.3.3 Layer 3

2.3.3.1 Interface VLAN

Operation	<p><u>Modify the IP Routing:</u></p> <ol style="list-style-type: none"> 1. Select IP Routing field. 2. Click "Modify" button to apply change. <p><u>Create New:</u></p> <ol style="list-style-type: none"> 1. Fill VID, IP Address and Netmask. 2. Click "Create New" button to create Interface VLAN. <p><u>Delete:</u></p> <ol style="list-style-type: none"> 1. Multi-select a row data in Interface VLAN table. 2. Click "Delete" button to delete Interface VLAN.
Field	Description
IP Routing	<p>Layer 3 IP routing/forward.</p> <p>Allow Disabled/Enabled.</p> <p>Default value is Disabled.</p>
VID	<p>Range 1~4094.</p> <p>1st Interface VLAN always exist for VLAN 1. (Can't be deleted)</p>
IP Address	<p>IP address for the vlan interface.</p> <p>Range 0~255.</p> <p>Default value is 0.</p>
Netmask	<p>Network subnet mask for the VLAN interface.</p> <p>Range 0~255.</p> <p>Default value is 0.</p>

Mac Address	MAC address for the VLAN interface. Read only.
--------------------	---

2.3.3.2 Static Route

Configuration / IP Route
Previous Command Result: Normal

Default Gateway: 0 . 0 . 0 . 0

Destination: . . .
 Netmask: . . .
 Gateway: . . .

Index	Destination	Netmask	Gateway
-------	-------------	---------	---------

Operation	<p><u>Modify default gateway:</u></p> <p>Click "Modify" button to apply new gateway.</p> <p><u>Create new static route:</u></p> <ol style="list-style-type: none"> 1. Fill Destination, Netmask and Gateway. 2. Click "Create New" button to create one static route. <p><u>Delete static route:</u></p> <ol style="list-style-type: none"> 1. Select static route entry(s). 2. Click "Delete" button to delete selection.
Field	Description
Default Gateway	Input default gateway IP address for management and Layer3 VLAN interface routing.
Destination	Destination network address of static route.
Netmask	Network subnet mask for the route.
Gateway	Next hop IP address for the destination network.
Index	The index of the static route.

2.3.4 Port Configuration

2.3.4.1 Bridge Port

Configuration / Bridge Port

Modify Refresh Related: [Giga Port, VLAN.](#)

Y: Enable Port Isolation
 N: Disable Port Isolation
 -: Not permit setting (Isolation port is the same as source port).

Operation	<p><u>Modify:</u></p> <p>Click "Modify" button to open modification page.</p> <p><u>Port Isolation - Modify:</u></p> <ol style="list-style-type: none"> 1. Click "Disable All", "Enable All" or click on (Y/N/-) to change isolation setting by port. 2. Click "Apply" to apply change or Press "Cancel" to cancel and go back to main page of Isolation.
Field	Description
Source Port	GE-1 ~ MAX Number of Port.
Isolation Port	<p>Option: Y/ N/ -.</p> <p>Y: Enable Isolation</p> <p>N: Disable Isolation</p> <p>-: Not permit setting (Isolation port is the same as source port)</p>
Disable All	Disable Isolation to all ports
Enable All	Enable Isolation to all ports
Apply	Apply setting data.
Cancel	Cancel setting data.

2.3.4.4. Jumbo Frame

Operation	<p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Modify the configuration. 2. Click "Modify" button to apply change.
Field	Description
Jumbo Frame	Option: Enabled/ Disabled, Default is Disabled.
Size	Range: 1536–9000 bytes, Default is 1536 bytes.

2.3.4.5 Port Mirror

Configuration / Port Mirror

Modify

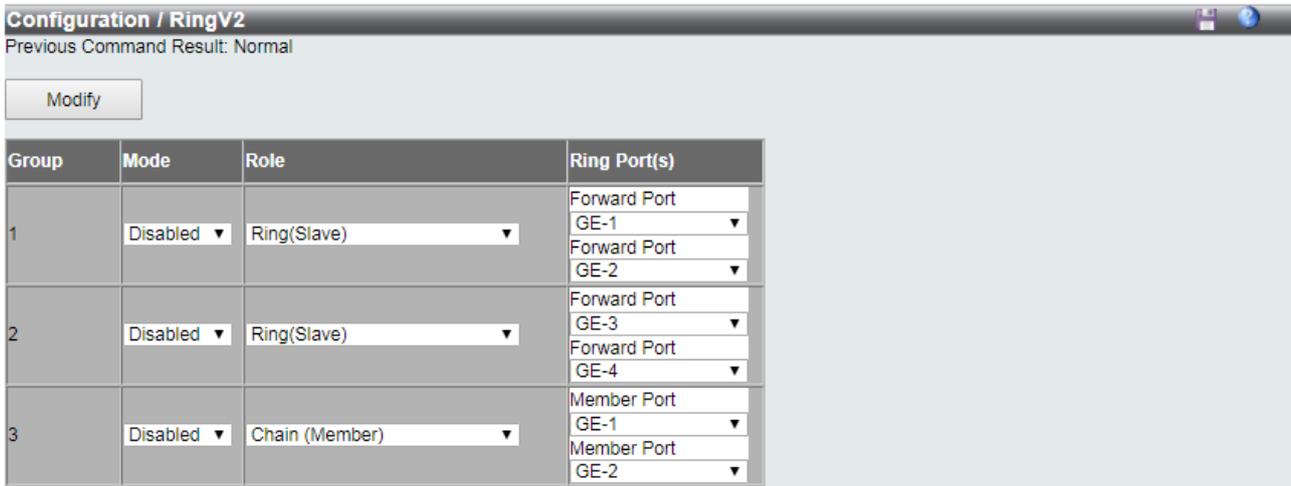

Related: [Giga Port.](#)

Previous Command Result: Normal

Port Mirror	Disabled
Monitored Port	GE-1
Tx Analyzer Port	GE-1
Rx Analyzer Port	GE-1

Operation	<p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Modify the configuration 2. Click "Modify" button to apply change
Field	Description
Port Mirror	Enable/Disable Port Mirror function, default is Disabled.
Monitored Port	Value range is GE-1 ~ Port MAX Number, default is GE-1. Port to be monitored.
Tx Analyzer Port	Value range is GE-1 ~ Port MAX Number, default is GE-1. It monitors 'out' packet of monitored port.
Rx Analyzer Port	Value range is GE-1 ~ Port MAX Number, default is GE-1. It monitors 'in' packet of monitored port.

2.3.4.6 Ring Protection

<p>Group</p>	<p>The group index. This parameter is used for easy identifying the ring when user configure it.</p> <p>Group 1 - this group supports configuration of ring.</p> <p>Group 2 - this group supports configuration of ring, coupling and dual-homing.</p> <p>Group 3 - this group supports configuration of chain and balancing-chain.</p>
<p>Mode</p>	<p>Enable Ring on the specific group.</p> <p># When Group 1 or 2 is enabled: All configuration of Group 3 will be reset to default. Group 3 all configuration options will be locked.</p> <p># To configure Group 3: Both Group1 and 2 should be disabled first. When Group 3 is enabled, all configuration of Group1 and 2 will be reset to default. Group 1 and 2 all configuration options will be locked.</p>

Role	<p>Configure the Ring group on this switch as specific role.</p> <p># Group 1 - support option of ring-master and ring-slave. Ring - it could be master or slave.</p> <p># Group 2 - support configuration of the ring, coupling and dual-homing. Ring - it could be master or slave. Coupling - it could be primary or backup. Dual-Homing</p> <p># Group 3 - support configuration of the chain and balancing-chain. Chain - it could be head, tail or member. Balancing Chain - it could be central-block, terminal-1/2 or member.</p> <p>Note 1 - Group 1 must be enabled before enable Group 2 to coupling. Note 2 - When Group 1 or 2 is enabled, the configuration of Group 3 will be disabled. Note 3 - When Group 3 is enabled, the configuration of Group 1 and 2 will be disabled.</p>
-------------	---

<p>Ring Port(s)</p>	<p>Selecting ring port(s).</p> <p>Each ring port must be unique, CANNOT be configured in different groups; 2 ring ports between ring/chain CANNOT be the same.</p> <p># When role is ring/master:</p> <ul style="list-style-type: none"> One ring port is forward port and another is block port. The block port is redundant port; it is blocking port in normal state. <p># When role is ring/slave:</p> <ul style="list-style-type: none"> Both ring ports are forward port. <p># When role is coupling/primary:</p> <ul style="list-style-type: none"> Only need one ring port named primary port. <p># When role is coupling/backup:</p> <ul style="list-style-type: none"> Only need one ring port named backup port. This backup port is redundant port; it is blocking port in normal state. <p># When role is dual-homing:</p> <ul style="list-style-type: none"> One ring port is primary port and another is backup port. <p>Operation</p>	<p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Select "Major" page 2. Select row(s) to be changed by checking up checkbox 3. Modify the configuration 4. Click "Modify" button to apply change. <p><u>Refresh:</u></p> <p>Click "Refresh" button to get current data.</p>
<p>Field</p>	<p>Description</p>
<p>Port</p>	<p>Range: GE-1 ~ MAX Number of Port</p>

<p>Priority</p>	<p>Range: 0~240 in step 16, Default is default=0x80(128). Default is default=0x80(128).</p>
<p>Edge</p>	<p>Range: Enabled/Disabled, default=Disabled.</p>
<p>State</p>	<p><i>Range:</i> Disabled/ Blocking/ Listening/ Learning/ Forwarding/ Broken</p> <p><i>Disabled :</i> For ports which are disabled (see dot1dStpPortEnable), this object will have a value of disabled.</p> <p><i>Blocking:</i> The port will go into a blocking state at the time of selection process, when a switch receives a BPDU on a port that indicates a better path to the root switch, and if a port is not a root port or a designated port.</p> <p><i>Listening:</i> After blocking state, a root port or a designated port will move to a listening state. All other ports will remain in a blocked state. During the listening state the port discards frames received from the attached network segment and it also discards frames switched from another port for forwarding. At this state, the port receives BPDUs from the network segment and directs them to the switch system module for processing. After a forward time delay (The default forward delay time is 15 seconds.), the switch port moves from the listening state to the learning state.</p> <p><i>Learning:</i> A port changes to learning state after listening state. During the learning state, the port is listening for and processing BPDUs. In the listening state, the port begins to process user frames and start updating the MAC address table. But the user frames are not forwarded to the destination. After a forward time delay (The default forward delay time is 15 seconds), the switch port moves from the learning state to the forwarding state.</p> <p><i>Forwarding:</i> A port in the forwarding state forwards frames across the attached network segment. In a forwarding state, the port will process BPDUs, update its MAC Address table with frames that it receives, and forward user traffic through the port. Forwarding State is the normal state. Data and configuration messages are passed through the port, when it is in forwarding state.</p> <p><i>Broken:</i> If the bridge has detected a port that is malfunctioning it will place that port into the broken state.</p>
<p>STP Port</p>	<p>Range: Enabled/ Disabled, Default is Enabled.</p>
<p>Path Cost</p>	<p>Range: 1 ~ 200000000, Default is 20000.</p>

Designated Root	<p>The parameter is the unique Bridge Identifier of the Bridge recorded as the Root in the Configuration BPDUs transmitted by the Designated Bridge for the segment to which the port is attached.</p> <p>Format : Root bridge priority + Root Bridge MAC address</p>
Designated Cost	<p>The parameter is the path cost of the Designated Port of the segment connected to this port. This value is compared to the Root Path Cost field in received BPDUs.</p>
Designated Bridge	<p>The parameter is the Bridge Identifier of the bridge which this port considers to be the Designated Bridge for this port's segment.</p> <p>Format: Designated bridge priority + Designated Bridge MAC address. [0x8000-001122334455]</p>
Designated Port	<p>The parameter (dot1dStpPortDesignatedPort) is the Port Identifier of the port of the Designated Bridge for this port's segment.</p> <p>Format: Designated port priority + Designated Port ID. [0x8001]</p>
Forward Transitions	<p>Forward Transitions count.</p>

2.3.7.3 MSTP Bridge

Operation	<p><u>Create New:</u></p> <ol style="list-style-type: none"> Fill "MSTI Name" and select "Priority" fields. (Default MSTI Name will be set when name is not input.) Designated Root	<p>The parameter is the unique Bridge Identifier of the Bridge recorded as the Root in the Configuration BPDUs transmitted by the Designated Bridge for the segment to which the port is attached.</p> <p>Format: MSTI's Root bridge priority + Root Bridge MAC address</p>
Bridge ID	<p>The parameter is the Bridge Identifier of the bridge which this port considers to be the Designated Bridge for this port's segment.</p> <p>Format: MSTI's priority + Bridge MAC address. [0x8000-001122334455]</p>
Root Cost	<p>The parameter is the path cost of the MSTI's Designated Port of the segment connected to this port. This value is compared to the Root Path Cost field in received BPDUs.</p>
Root Port	<p>The parameter is the MSTI's Port Identifier of the port of the Designated Bridge for this port's segment.</p> <p>[0x8001]</p>

2.3.7.4 MSTP Port

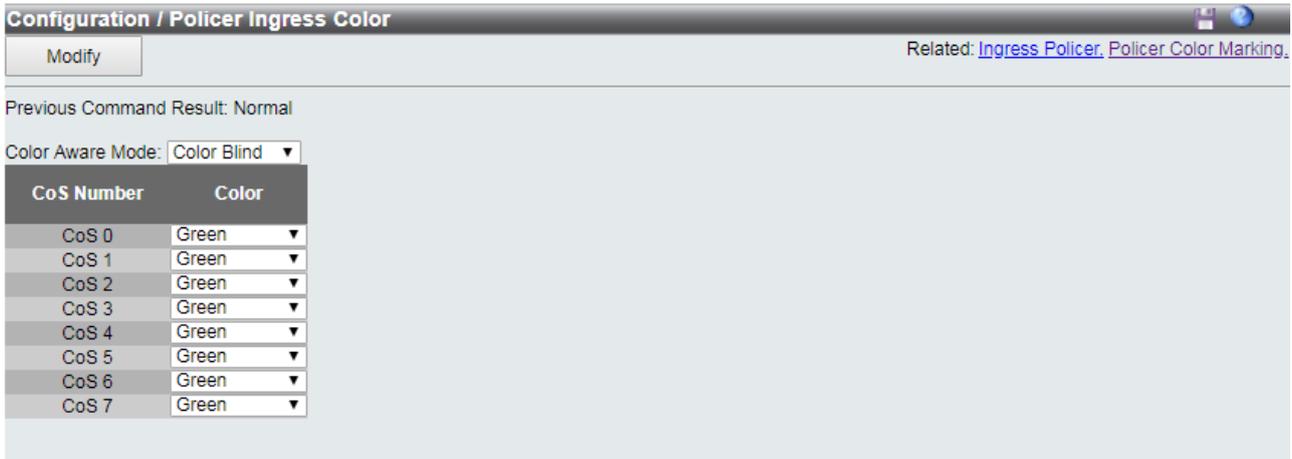

Operation	<p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Select a row item to selected 2. Set or select the following fields. 3. Click "Modify" button.
Field	Description
Port	Range: GE-1 ~ MAX Number of Port
Priority	Range: 0~240 in step 16, Default is default=0x80(128).
Path Cost	Range: 1 ~ 200000000, Default is 20000.
Role	Range: Disabled/ Root/ Designated/ Alternate/ Backup/ Master/ Unknown.
State	<p><i>Range:</i> Disabled/ Blocking/ Listening/ Learning/ Forwarding/ Broken</p> <p><i>Disabled:</i> For ports which are disabled (see dot1dStpPortEnable), this object will have a value of disabled.</p> <p><i>Blocking:</i> The port will go into a blocking state at the time of selection process, when a switch receives a BPDU on a port that indicates a better path to the root switch, and if a port is not a root port or a designated port.</p> <p><i>Listening:</i> After blocking state, a root port or a designated port will move to a listening state. All other ports will remain in a blocked state. During the listening state the port discards frames received from the attached network segment and it also discards frames switched from another port for forwarding. At this state, the port receives BPDUs from the network segment and directs them to the switch system module for processing. After a forward time delay (The default forward delay time is 15 seconds.), the switch port moves from the listening state to the learning state.</p> <p><i>Learning:</i> A port changes to learning state after listening state. During the learning state, the port is listening for and processing BPDUs. In the listening state, the port begins to process user frames and start updating the MAC address table. But the user frames are not forwarded to the destination. After a forward time delay (The default</p>

	<p>forward delay time is 15 seconds), the switch port moves from the learning state to the forwarding state.</p> <p><i>Forwarding:</i> A port in the forwarding state forwards frames across the attached network segment. In a forwarding state, the port will process BPDUs, update its MAC Address table with frames that it receives, and forward user traffic through the port. Forwarding State is the normal state. Data and configuration messages are passed through the port, when it is in forwarding state.</p> <p><i>Broken:</i> If the bridge has detected a port that is malfunctioning it will place that port into the broken state.</p>
Designated Root	<p>The parameter is the unique Bridge Identifier of the Bridge recorded as the Root in the Configuration BPDUs transmitted by the Designated Bridge for the segment to which the port is attached.</p> <p>Format : Root bridge priority + Root Bridge MAC address</p>
Designated Cost	<p>The parameter is the path cost of the Designated Port of the segment connected to this port. This value is compared to the Root Path Cost field in received BPDUs.</p>
Designated Bridge	<p>The parameter is the Bridge Identifier of the bridge which this port considers to be the Designated Bridge for this port's segment.</p> <p>Format: Designated bridge priority + Designated Bridge MAC address. [0x8000-001122334455]</p>
Designated Port	<p>The parameter (dot1dStpPortDesignatedPort) is the Port Identifier of the port of the Designated Bridge for this port's segment.</p> <p>Format: Designated port priority + Designated Port ID. [0x8001]</p>

2.3.8 Policer

2.3.8.1 Policer Ingress Color

Operation	<p>Modify:</p> <ol style="list-style-type: none"> 1. Select "Color Blind" or "Color Aware" 2. Modify the configuration of CoS 0~7 3. Click "Modify" button to apply change
Field	Description
Color Aware Mode	Color Blind/ Color Aware. Default is Color Blind.

2.4.4 Giga Port Statistics

Input Counter	Value	Output Counter	Value
Input Bytes	0	Output Bytes	0
Unicast Pkts	0	Unicast Pkts	0
Multicast Pkts	0	Multicast Pkts	0
Broadcast Pkts	0	Broadcast Pkts	0
Discard Pkts	0	Discard Pkts	0
Error Pkts	0	Error Pkts	0

Operation	<p><u>Refresh:</u></p> <ol style="list-style-type: none"> 1. Fill query condition (Port) 2. Refresh current data. <p><u>Clear:</u></p> <ol style="list-style-type: none"> 1. Select clear port. 2. Click “Clear” to clear setting port data.
Field	Description
Port	Range: GE-1 ~Maximum Number of Port.
Input Bytes	The total number of octets received on the interface, including framing characters.
Input Unicast Pkts	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were not addressed to a multicast or broadcast address at this sub-layer.
Input Multicast Pkts	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional address.
Input Broadcast Pkts	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a broadcast address at this sub-layer.
Input Discard Pkts	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.

Input Error Pkts	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol.
Output Bytes	The total number of octets transmitted out of the interface, including framing characters.
Output Unicast Pkts	The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
Output Multicast Pkts	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional address.
Output Broadcast Pkts	The total number of packets that higher-level protocol requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent.
Output Discard Pkts	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
Output Error Pkts	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.

2.4.5 RMON

Operation	<p><u>Refresh:</u></p> <p>Click "Refresh" button to refresh current data.</p> <p><u>Clear:</u></p> <ol style="list-style-type: none"> 1. Select clear port. 2. Click "Clear" to clear counters of port (reset counters).
Field	Description
Pkts 64 Octets	Total number of packets (including bad packets) received that were 64 octets in length.
Pkts 65 to 127 Octets	Total number of packets (including bad packets) received that were between 65 and 127 octets in length.
Pkts 128 to 255 Octets	Total number of packets (including bad packets) received that were between 128 and 255 octets in length.
Pkts 256 to 511 Octets	Total number of packets (including bad packets) received that were between 256 and 511 octets in length.
Pkts 512 to 1023 Octets	Total number of packets (including bad packets) received that were between 512 and 1023 octets in length.
Pkts 1024 to 1518 Octets	Total number of packets (including bad packets) received that were between 1024 and 1518 octets in length.
Octets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).

Packets	The total number of packets (including bad packets, broadcast packets, and multicast packets) received
Broadcast Pkts	The total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets
Multicast Pkts	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
CRC Align Errors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
Undersize Pkts	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
Oversize Pkts	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
Fragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
Jabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
Collisions	The best estimate of the total number of collisions on this Ethernet segment.
Drop Events	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.

2.4.6 Users

Operation	<p><u>Refresh:</u></p> <p>Click "Refresh" button to refresh current data.</p>
Field	Description
Index	Show the index of login user list.
Interface Type	Show the mode of access. Possible values Console, CLI, Web.
Account Name	Show the account name of the user.
Information	Show more information about the user, including IP address of the management host.

2.4.7 Ring Protection Status

Monitor / RingV2 Status

Refresh

Previous Command Result: Normal

RingV2 Status

Group index	Mode	State	Role	Ring Port(s)
1	Disabled	--	Ring(Slave)	--
2	Disabled	--	Ring(Slave)	--
3	Disabled	--	Chain(Member)	--

Refresh	<p><u>Refresh</u>:</p> <p>Click "Refresh" button to refresh current data.</p>
Group Index	The group index. This parameter is used for easy to identify the ring when user to configure it.
Mode	It indicates whether the group is enabled
Role	It indicates that the group is configured for what role
State	<p>When ring is completeness, it will show "Normal".</p> <p>When ring is not completeness, at least one link is down, it will show "Fail"</p>
Ring Port(s)	Describes current status of ring port(s)

	<p>fields.</p> <p>4. Click "Apply" to apply change or click "Cancel" to cancel it.</p>
Field	Description
User Name	Shows the user name (up to 32 characters).
Access Level	<p>Show the access level of the user:</p> <p>Super User - The user can access to all functions.</p> <p>Engineer - The user can access to all functions except user account management.</p> <p>Guest - The user can access to basic display functions.</p>
Password	Enter a login password of 1-31 characters.
Confirm Password	Enter the login password of previous field again.
Comment	Description of the user account (up to 31 characters).

2.5.11 SNMP

2.5.11.1 SNMP Options

<p>Operation</p>	<p><u>Restart:</u></p> <p>After any SNMP setting changed, only configuration is changed, but not apply to the system yet. All SNMP changed configuration could work after restart SNMP. It will not reboot system, but may take several seconds to load SNMP setting.</p> <p><u>Modify SNMP Version:</u></p> <p>This button is used to set whether snmp v3 is enable or not. If snmpV3 switch is set to disable, the system would use snmp v2c only. If snmpV3 switch is set to enable, the system would use snmp v3 setting. Changing this will restart SNMP automatically.</p> <p>The snmp v3 parameters would be valid only if snmp v3 is enabled.</p>
-------------------------	---

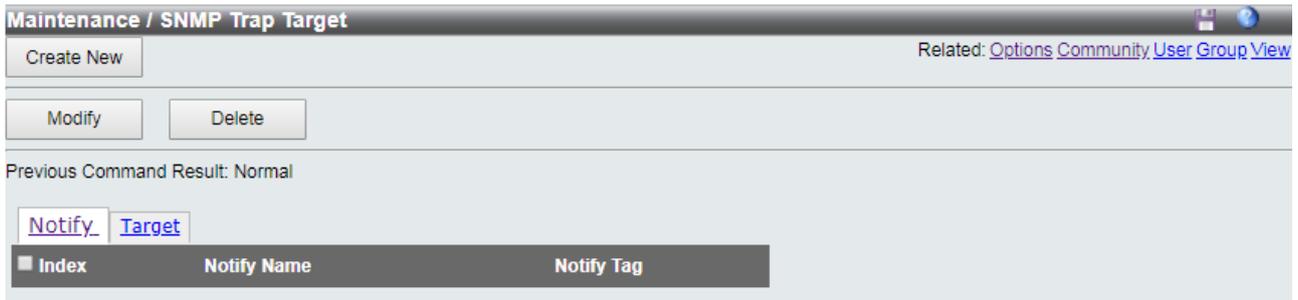

2.5.11.2 SNMP Community

Index	Community Name	View/Group Name	Access Mode
1	public	none	Get/Set

Operation	<p><u>Create:</u></p> <ol style="list-style-type: none"> 1. Fill the Community name. 2. Click "Create New" button to create new Community. <p><u>Modify community entry:</u></p> <ol style="list-style-type: none"> 1. Select entry by check up the check box 2. Modify field data: 3. Click "Modify" button to apply the change <p><u>Delete community entry:</u></p> <p>Select entry by check box, then click "Delete".</p> <p>Note: This page supports multi-selection, click one or more row items to delete. User also could click "select all" to delete all target items.</p>
Field	Description
Index	SNMP Community index, The system supports up to 32 Community data.
Community Name	SNMP Community name, for SNMP v1/v2c. Only if community name match, the SNMP request would be received. Community Name max size is 31 characters.
View/Group Name	View and Group are used for SNMP v3 only. A community is allowed to bind one of the view or group name. If it does not take any group or view, it will be a v1/v2c community. If it takes a view or a group name, the community will be treated as a v3 community. The v2c and v3 communities could exist in the community table concurrently. It will display "unknown(name)" when view/group name doesn't exist in view/group table.
Access Mode	Choice access right. Allow Get operation only, or allow both Get and Set.

2.5.11.3 Trap Target

SNMP Modify:

<p>Operation</p>	<p><u>Create:</u></p> <ol style="list-style-type: none"> 1. Click "Create New" button to create new notify tag. 2. Fill the notify name and notify tag. 3. Click "Apply" to create, "Cancel" to abort. <p><u>Modify:</u></p> <ol style="list-style-type: none"> 1. Select entry by check box 2. Modify field data 3. Click "Modify" button to apply change. <p><u>Delete:</u></p> <ol style="list-style-type: none"> 1. Select entry by check box 2. Click "Delete" button to delete Notify Tag item.
<p>Field</p>	<p>Description</p>
<p>Index</p>	<p>SNMP notify tag index, The system supports up to 32 notify tags.</p>
<p>Notify Name</p>	<p>Name of Notify entry. Notify Name max size is 31 characters.</p>
<p>Notify Tag</p>	<p>Notify Tag string.</p> <p>If tag of Target entry matches any tag from tags of Notify Table, then SNMP trap function would work.</p> <p>Notify Tag max size is 31 characters.</p>

SNMP Target:

Operation	<p><u>Create:</u></p> <ol style="list-style-type: none"> 1. Click "Create New" button to create new target data 2. Fill the target IP address, name, port number, and trap version. Give a new tag name or select a existing notify tag name as target name 3. Click "Apply" to create, "Cancel" to abort. <p><u>Modify:</u></p> <p>Click row item "modify" button to modify existence target data.</p> <p><u>Delete:</u></p> <p>Select entry by check box, then click "Delete".</p> <p>Note: This page supports multi-selection, click one or more row items to delete. User also could click "select all" to delete all target items.</p>
Field	Description
Index	SNMP target index, The system supports up to 32 target entries.
Target Address	Target IP address, the host IP address of trap receiver. Value range 0.0.0.0 ~ 255.255.255.255
Address Port	Target Address port number. TCP Port number of Trap receiver. Range: 0 ~ 65535, Default is 162
Target Name	Name of target. Target Name max size is 31 characters.
Target Tag	Add a target tag, or pick up existing notify tag from Notify Table.
Trap Version	Select SNMP trap version. Supports v1/v2c

2.5.11.4 User

Maintenance / SNMP User Related: [Options](#) [Community](#) [Target](#) [Group](#) [View](#)

User Name:
 User Type:
 Group Name:

Auth Protocol:
 Auth Password:

Priv Protocol:
 Priv Password:

Previous Command Result: Normal

No.	User Name	Security Level	User Type	Group Name	Auth Protocol	Auth Password	Priv Protocol	Priv Password
-----	-----------	----------------	-----------	------------	---------------	---------------	---------------	---------------

Operation	<p><u>Create new:</u></p> <ol style="list-style-type: none"> 1. Fill "User Name" and select "User Type", "Auth Protocol" and "Priv Protocol". 2. Click "Create New" button to create new user. <p><u>Delete:</u></p> <ol style="list-style-type: none"> 1. Select a row data in user account table (also support multi-select). 2. Click "Delete" button to delete user account.
Field	Description
User Name	User name, length 1~31. Accept any characters except space, quote mark and "?".
User Type	<p>SNMPv3 user type.</p> <p>Options:</p> <ol style="list-style-type: none"> 1. Read Only 2. Read Write 3. v3 User <p>If "User type" is "v3 User", the "Group Name" should be provided.</p> <p>No matter which User Type is selected, the authentication and Privacy options are allowed.</p>
Group Name	<p>Access Group name, length 1~15.</p> <p>Accept any characters except space, quote mark and "?".</p> <p>If user type is "Read Only" or "Read Write", then this field is not needed.</p>

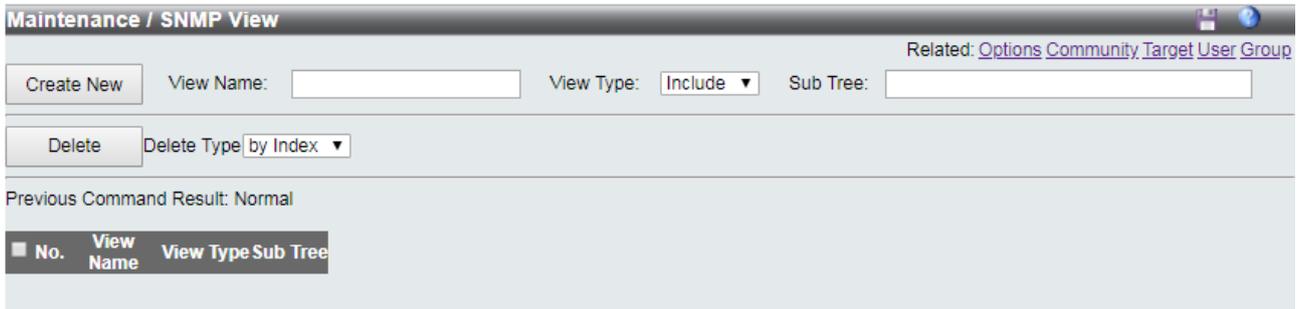

<p>Auth Protocol</p>	<p>User authentication protocol. Works only if SNMPv3 is enabled.</p> <p>Options:</p> <ol style="list-style-type: none"> 1. None 2. MD5 3. SHA <p>If "Auth Protocol" is "None", "Priv Protocol" always is "None". If "Auth Protocol" is MD5 or SHA, "Auth Password" should be input.</p>
<p>Auth Password</p>	<p>Authentication password, length 8~15. Works only if SNMPv3 is enabled.</p> <p>Accept any characters except space, quote mark and "?".</p> <p>If Authentication Protocol is "None", then Privacy options are not needed.</p>
<p>Priv Protocol</p>	<p>User Privacy protocol. Works only if SNMPv3 is enabled.</p> <p>If "Priv Protocol" is not "None", "Priv Password" should be input.</p> <p>Options:</p> <ol style="list-style-type: none"> 1. None 2. DES
<p>Priv Password</p>	<p>Privacy password, length 8~15. Works only if SNMPv3 is enabled.</p> <p>Accept any characters except space, quote mark and "?".</p> <p>If "Priv Protocol" is "None" the field not needed.</p>

2.5.11.5 Group

<p>Operation</p>	<p><u>Create new:</u></p> <ol style="list-style-type: none"> 1. Fill "Group Name" and select "Sec. Model", "Sec. Level". 2. Click "Create New" button to create new group. <p>Note: max group entry: 32</p> <p><u>Delete:</u></p> <ol style="list-style-type: none"> 1. Select a row data in VACM group table (also support multi-select). 2. Click "Delete" button to delete user account.
<p>Field</p>	<p>Description</p>
<p>Group Name</p>	<p>Group name, length 1~15. Accept any characters except space, quote mark and "?".</p>
<p>Security Model</p>	<p>SNMP security model.</p> <p>Options:</p> <ul style="list-style-type: none"> - v1 supports read/write view. - v2c supports read/write view. - v3usm supports read/write view & security level.

<p>Security Level</p>	<p>User security level.</p> <p>If "Security Model" is "v1" or "v2c", the field is not used, it will be show as "--".</p> <p>States as below:</p> <ul style="list-style-type: none"> - NoAuth, NoPriv (No authentication and no Privacy) - Auth, NoPriv (Authentication and no Privacy) - Auth, Priv (Authentication and Privacy)
<p>Read View</p>	<p>Access View for Read (snmp-get)</p> <p>Select from the view list. If list is empty, create access view with page "SNMP View" first.</p> <p>It will display "unknown(xxxx) when the name of xxxx doesn't exist in view name.</p>
<p>Write View</p>	<p>Access View for Write (snmp-set)</p> <p>Select from the view list. If list is empty, create access view with page "SNMP View" first.</p> <p>It will display "unknown(xxxx) when the name of xxxx doesn't exist in view name.</p>

2.5.11.6 SNMP View

<p>Operation</p>	<p><u>Create new:</u></p> <ol style="list-style-type: none"> 1. Fill "View Name", "Sub Tree" and select "View Type". 2. Click "Create New" button to create new view. <p>Note: max group entry: 32</p> <p><u>Delete:</u></p> <ol style="list-style-type: none"> 1. Select a row data in VACM view table (also support multi-select). 2. Click "Delete" button to delete user account. <p>VACM View can be delete by Name or by Index. Note that if delete by name, all entries with the same name would be deleted together.</p>
<p>Field</p>	<p>Description</p>
<p>View Name</p>	<p>View name, length 1~15. Accept any characters except space, quote mark and "?".</p>

<p>View Type</p>	<p>Accessible/Not accessible of object (SNMP OID).</p> <p>Select down list box:</p> <ol style="list-style-type: none"> 1. Include, allow access the subtree/oid; 2. Exclude, doesn't allow access the subtree/oid. <p>Note: the oid is a prefix, no need to match it exactly.</p> <p>For example: 1.3.6.1.2.1 (include), it means 1.3.6.1.2.1.* are accessible.</p> <p>For example: 1.3.6.1.2.1 (exclude), it means 1.3.6.1.2.1.* are NOT accessible.</p> <p>An example of wildcard(*):</p> <p>1.3.6.1.*.1 (include), it means that</p> <p>1.3.6.1.4.1.* are accessible and</p> <p>1.3.6.1.2.1.* are accessible.</p>
<p>Sub Tree</p>	<p>SNMP OID or Object Name of MIB</p> <p>Input format is OID, char length 1~31.</p> <p>Accept MIB object name "iswitch", or wildcard (*).</p> <p>iswitch represents 1.3.6.1.4.1.5833.2012 (this is just an example, please reference to actual OID designed for product.)</p> <p>For example:</p> <p>1.3.6.1.2.1</p> <p>1.3.6.1.4.1.5833.2012</p> <p>iswitch.1</p> <p>iswitch.2.6.1.1.*.4</p> <p>(iswitch.2.6.1.1 is EthernetPort Entry, it means this view include/exclude the 4th port of the table.)</p>
