## Introduction

Nuclias Connect is D-Link's centralized management solution for Small-to-Medium-Sized Business (SMB) networks. Nuclias Connect makes it easier to analyze, automate, configure, optimize, scale, and secure your network — delivering the convenience of an Enterprise-wide management solution, at an SMB price. Nuclias Connect gives you the financial and technical flexibility to expand from a small network to a larger one (up to 1,000 APs), while retaining a robust and centralized management system. And with its intuitive Graphical User Interface (GUI), a wealth of enhanced AP features, and a setup wizard that supports 11 languages, Nuclias Connect minimizes the hassle of deployment, configuration, and administration tasks.

The DNH-100 Nuclias Connect Hub is a hardware controller with pre-loaded Nuclias Connect software. It is designed to support small-to-medium business or enterprise environments by providing network administrators the capability to manage D-Link DAP series access points and switches through one single platform. The Nuclias Connect Hub can currently manage up to one hundred APs per unit with the potential to extend to other Nuclias Connect products in future firmware updates.

## Product Overview

### Package Contents

### System Requirements

## Package Contents

- DNH-100 Nuclias Connect Hub
- Power Cord
- Rack Mount Kit
- Quick Start Guide
- 16 GB MicroSD Card (Optional\*)

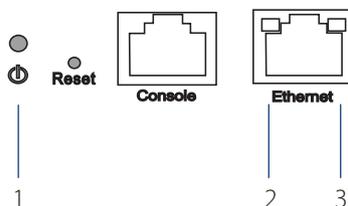

## System Requirements

- Computers with Windows®, Macintosh®, or Linux-based operating systems with an installed Ethernet Adapter
- Microsoft Edge, Safari 7, Firefox 28, or Google Chrome 33 and above (for configuration)

# Hardware Overview

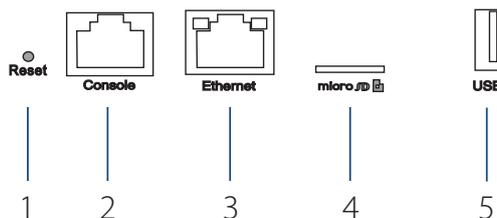

LED Indicators
Interface Connectors

## LED Indicators

#	LED	Description
1	Power	Solid Green - The device is powered on and ready for use, and it is in standalone mode. Blinking Green - The device is booting up. Solid Red - Device is unable to boot .
2	Link Speed (10/100 Mbps)	Solid Green - Port is operating at 10/100 Mbps Light Off - No Link.
3	Link Speed (1000 Mbps)	Solid Green - Port is operating at 1000 Mbps Light Off - No Link.

## Interface Connectors

#	Connector	Description
1	Reset	Used for rebooting or resetting the device back to factory default settings.
2	Console Port	RJ-45 port to connect the RJ-45 console cable for CLI management .
3	Ethernet Port	Gigabit RJ-45 port for LAN connection.
4	MicroSD Slot	MicroSD slot for MicroSD card <sup>1,2,3</sup> up to 32 GB.
5	USB Port	USB 3.0 Type A port <sup>2</sup> (provides 5V/1A power for optional HDD connection).

<sup>1</sup> Due to EU regulations the 16 GB MicroSD card is only included in the WW version.  
<sup>2</sup> Only FAT32 format is supported.  
<sup>3</sup> Do not remove the microSD card while the power is on as this may damage your card.

# Installation

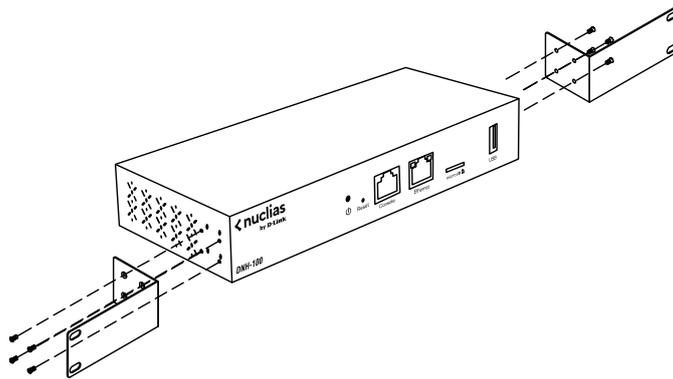

## Mounting

## Connecting the Controller

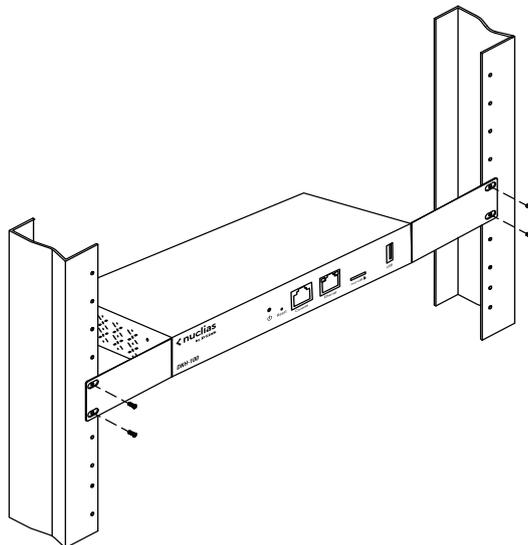

### Mounting

The DNH-100 can be mounted in an EIA standard size 19-inch rack, which can be placed in wiring closet with other equipment.

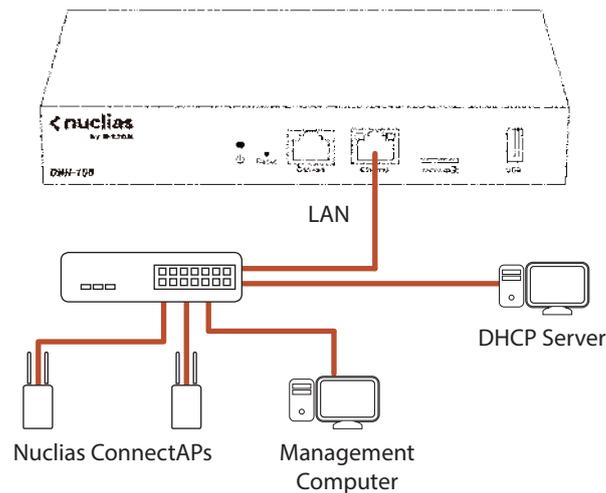

1. Attach the L-shaped mounting brackets to each side of the chassis as shown in Figure 3 and secure them with the screws provided.

2. Mount the device in the rack using a screwdriver and the supplied rack-mounting screws.

## Connecting the Controller

To connect the DNH-100, perform the following procedure:

1. Install the DNH-100 and access points/switches according to the instructions in their documentation. Access points by default will receive an IP address from the DHCP server.
2. Connect one end of an Ethernet LAN cable to port labeled as **Ethernet** on the front of the wireless controller. Connect the other end of the cable to an available RJ-45 port on a switch in the LAN network segment.
3. Plug one end of the AC power cord into the AC power connector on the back panel of the device. Plug the other end into an AC power source.

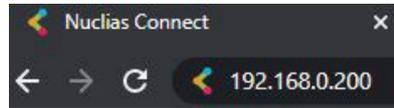

# Basic Configuration

## Launching Nuclias Connect

### Launching Nuclias Connect

The DNH-100 comes preloaded with Nuclias Connect. Open a web browser from the management computer and enter the **IP address** or **Domain Name** of the DNH-100. The default IP address is `https://192.168.0.200`.

**Note:** For initial configuration, the management computer and DNH-100 must be in the same subnet.

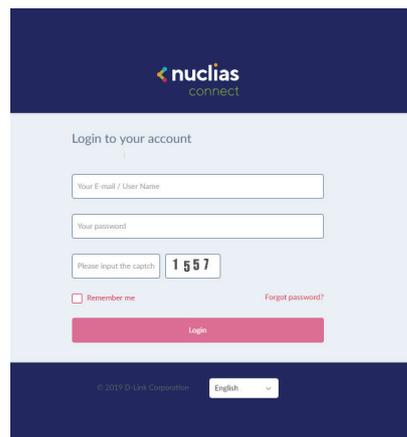

The default user name and password of Nuclias Connect is 'admin'.

Enter the Captcha code as shown on screen.

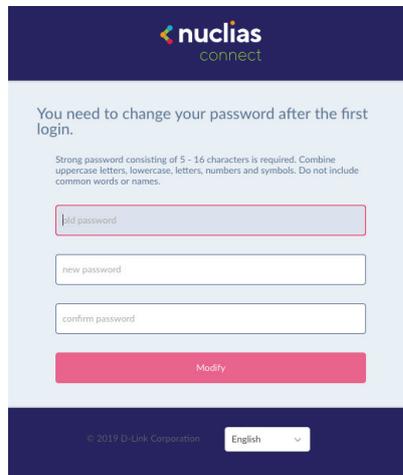

**NOTE:**

- The **Remember me** function can be selected to save the password entry for future use.
- The **Forgot password?** function allows you to reset your password in the event that you forget your current password. To use this function, the SMTP server and email address must be configured first.
- The interface supports multi-language options. By clicking the language drop-down menu, a different language can be selected.

A screenshot of the Nuclias Connect login page. The page has a dark blue header with the "nuclias connect" logo. Below the header, the text "Login to your account" is displayed. There are three input fields: "Your E-mail / User Name", "Your password", and a captcha field with the text "Please input the captcha:" and the number "1557". Below the input fields, there is a "Remember me" checkbox and a "Forgot password?" link. A pink "Login" button is at the bottom of the form. At the very bottom of the page, there is a footer with "© 2019 D-Link Corporation" and a language dropdown menu set to "English".

After the web browser opens and connects successfully to the server, a change-password prompt will appear. Updating the default password is required after the first login.

When assigning a password, it is recommended to use a strong password. The new password is required to be 5 - 16 characters in length. By combining uppercase and lowercase characters, numbers and symbols a strong password can be created.

The screenshot shows a web interface for changing a password. At the top, the 'nuclias connect' logo is displayed. Below the logo, a message states: 'You need to change your password after the first login.' A sub-message provides password requirements: 'Strong password consisting of 5 - 16 characters is required. Combine uppercase letters, lowercase, letters, numbers and symbols. Do not include common words or names.' There are three input fields: 'old password', 'new password', and 'confirm password'. A red 'Modify' button is located below the input fields. At the bottom of the page, there is a copyright notice '© 2019 D-Link Corporation' and a language dropdown menu set to 'English'.

**NOTE:** Do not include common words or names.

Enter the previous password in the **Old Password** field.

In the **New Password** field, enter the new password.

Enter the same password in the **Confirm Password** field to verify the entry.

Click **Modify** to complete the process.

# Nuclias Connect Configuration Wizard

A wizard is available to guide you through first-time setup of the device. If at any time you wish to re-run the wizard, you can click on the  icon on the top right to start the wizard.

When wizard is activated, a string of settings prompt will appear.

In the **System Settings** window, configure the following:

Parameter	Description
<b>Device Access Address</b>	Enter the Nuclias Connect Server application’s IP address. To manage remote APs, the IP address must be a public IP address; IP mapping is required for instances behind a firewall or router.
<b>Device Access Port</b>	Enter the Nuclias Connect server application’s listen port number. The default value is 8443. For remote AP management behind a firewall or router, the inbound port must be opened.
<b>Web Access Port</b>	The web access ports as defined during the installation. The values are predefined.
<b>Country</b>	Select the designated country from the drop-down menu.

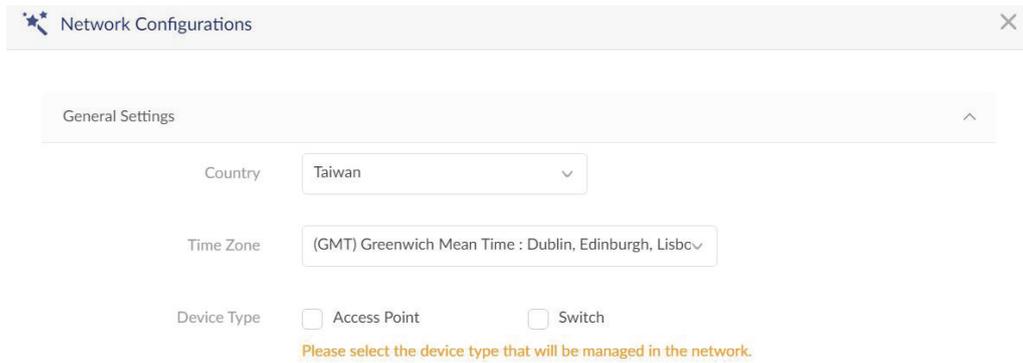

Once the system settings has been configured, click **Next** to continue. The **Add Network** page will appear:

In the **Add Network** window, configure the following:

Parameter	Description
<b>Site</b>	From the Site drop-down menu, select an existing site or new Site and enter the name of the site in the field.
<b>Network Name</b>	Enter a name to identify the new network.
<b>Network ID</b>	The Network ID is an optional field. It will be used on REST API function. Leave it as blank if not using REST API.

Once the network settings has been configured, click **Next** to continue or **Exit** to return to the previous step.

The **Network Configurations** page is displayed. Under the General Settings tab, select a country, time zone, and the device type that will be managed in the network.

Network Configurations

General Settings

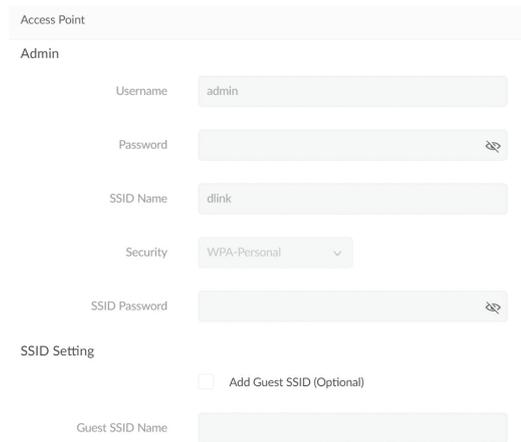

Country: Taiwan

Time Zone: (GMT) Greenwich Mean Time : Dublin, Edinburgh, Lisbo

Device Type:  Access Point  Switch

Please select the device type that will be managed in the network.

When Access Point is selected, the following configuration will appear:

Access Point

Admin

Username: admin

Password: [password field]

SSID Name: dlink

Security: WPA-Personal

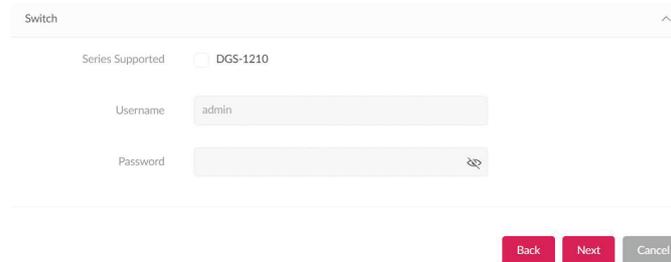

SSID Password: [password field]

SSID Setting

Add Guest SSID (Optional)

Guest SSID Name: [text field]

When Switch is selected as the device type, the following configuration will appear:

Switch

Series Supported:  DGS-1210

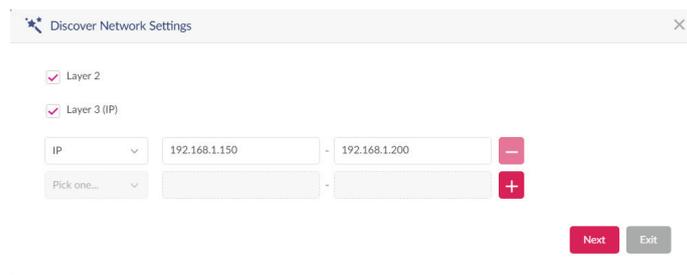

Username: admin

Password: [password field]

Back Next Cancel

When the network configurations is defined, click **Next** to continue, or click **Back** to return to the previous page.

The **Discover Network Settings** page is displayed. Select the data link layer (layer 2 or layer 3) to define the type of network to run on. If Layer 3 is selected, click the drop-down menu to define either an IP or a prefix segmentation. Click **+** to add additional IP/prefix segments or **Next** to continue. Click **Exit** to discontinue the configuration process.

Discover Network Settings

Layer 2

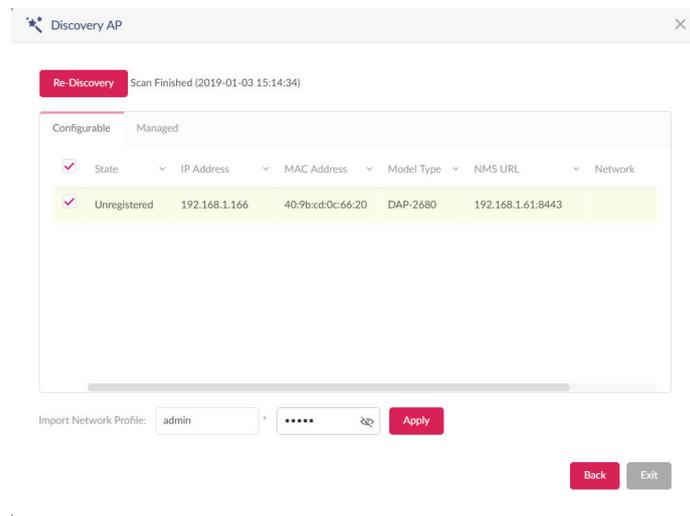

Layer 3 (IP)

IP: 192.168.1.150 - 192.168.1.200

Pick one... [dropdown]

Next Exit

The Start Discovery Page is displayed. Click **Start Discovery** to search for all available unmanaged devices. If a device is found, select it and click **Apply** to import the network profile. Click on the Managed tab to select defined devices and add them to the network.

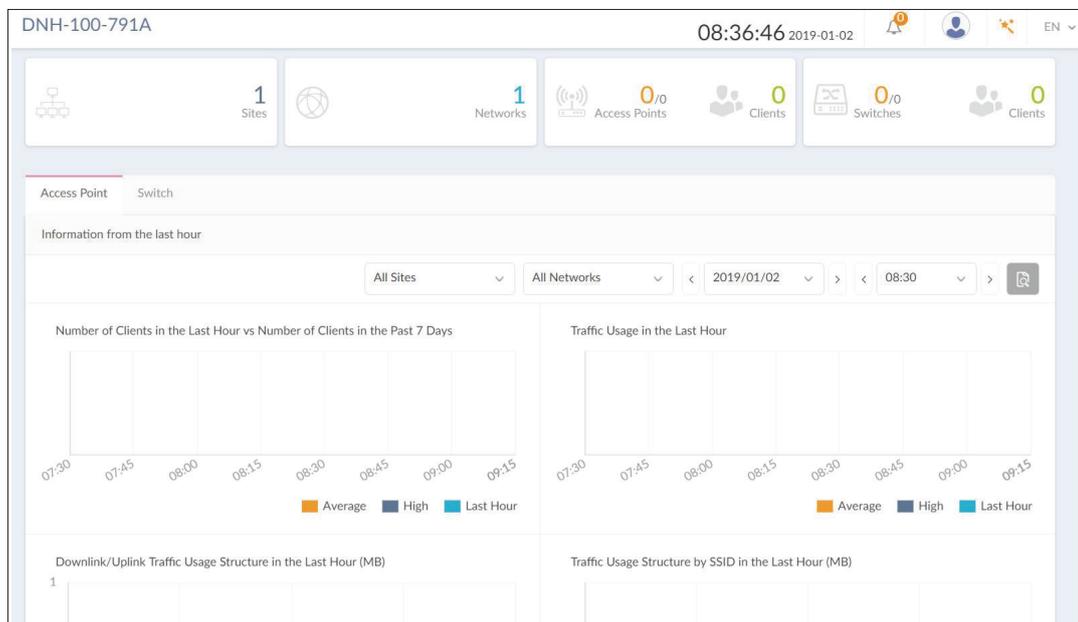

# Dashboard

After successfully logging into the server, the **Dashboard** page for Access Point and Switch is displayed. The dashboard provides an overview of total sites, created networks, available access points and its clients, and available switches and its clients.

Access Point	Description
<b>Information from the Last Hour</b>	Displays log information for the number of clients, traffic usage, downlink/uplink traffic usage, and traffic usage by SSID.
<b>Channel Utilization</b>	Displays the utilization rate for both 2.4 and 5 GHz bandwidth.
<b>Last Events</b>	Displays a simplified log version of the latest events across all or selected sites.

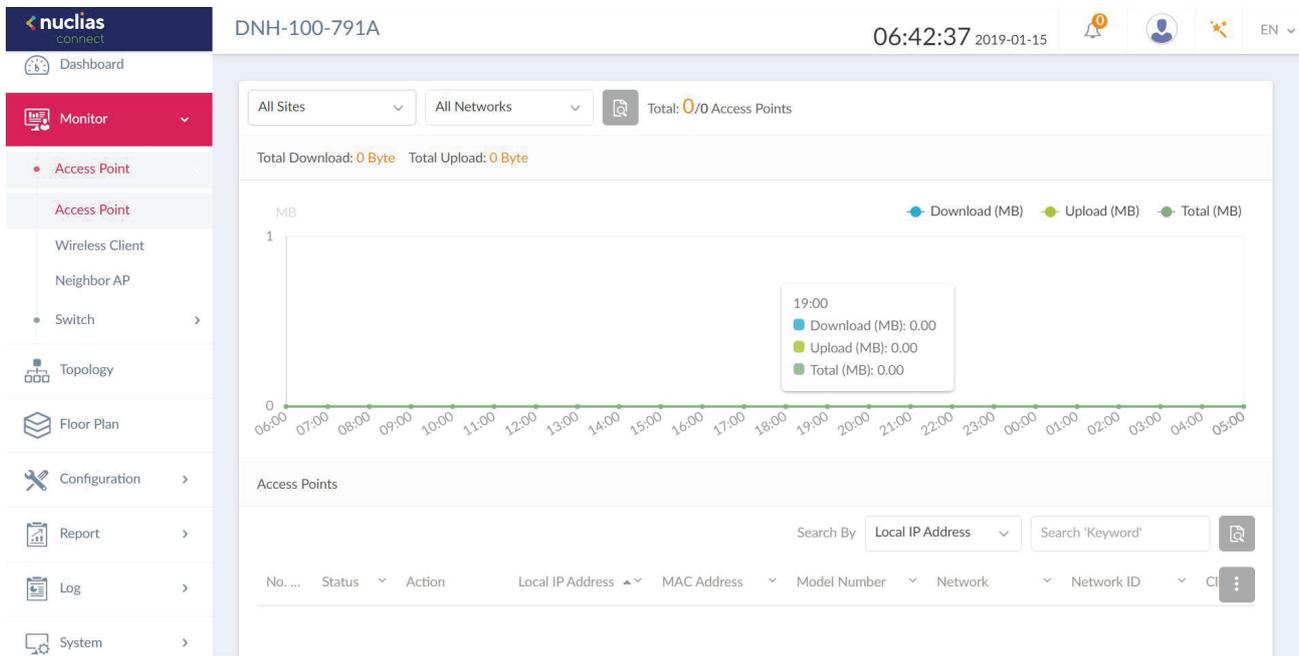

Switch	Description
<b>Information from the Last Hour</b>	Displays log information for Tx/Rx traffic usage and PoE USAGE.
<b>PoE Utilization</b>	Displays the utilization rate of switches across different sites and networks.
<b>Last Events</b>	Displays a simplified log version of the latest events across all or selected sites.

Nuclias                      Monitor                      Access Point

Access Point

Go to **Monitor** -- > **Access Point** to view data usage and total number of access points. On this page, you can view a summary of the data usage of all or selected number of wireless clients and networks managed by the application.

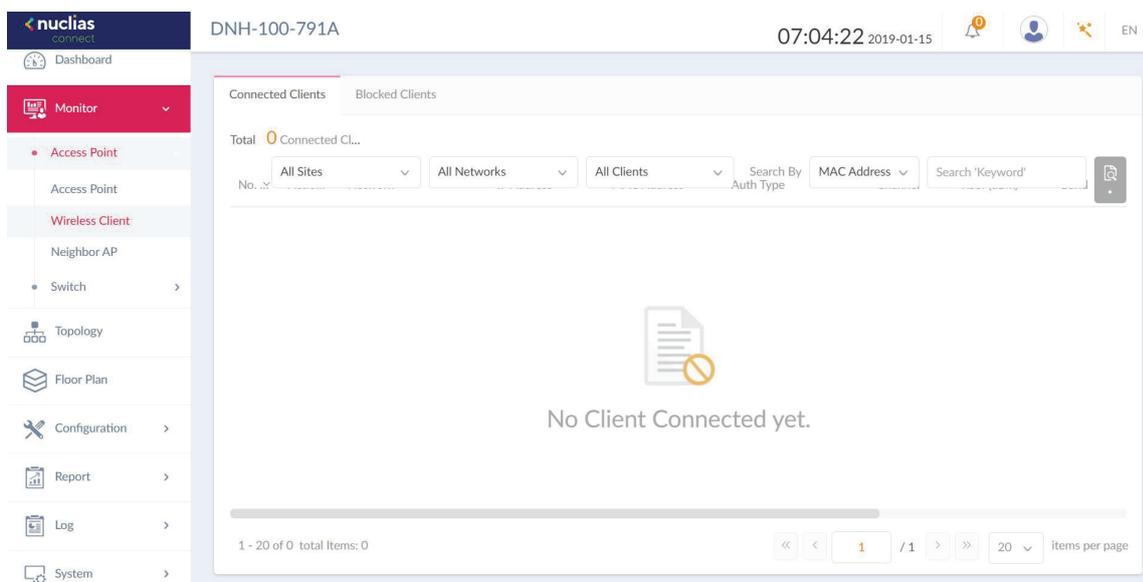

In the **Search By** drop-down field, select an attribute (**Local IP Address, Local IPv6 Address, NAT IP Address, MAC Address, Model Type, FW Version, Name, Location, Channel 2.4G, Channel 5G 1, Channel 5G 2 (Tri-Band), Power 2.4G, Power 5g 1, Power 5g 2 (Tri-Band)**) to specify the search field or enter a keyword related to the target device in the Search field. Click to start the search. Any relevant devices meeting the search criteria will be listed

Nuclias Monitor Access Point Wireless Client  
**Connected Clients**

Navigate to **Monitor > Access Point > Wireless Client**, the Connected Clients tab is displayed. A detail summary of all connected clients managed by the application can be viewed. Three filters can be applied to narrow the scope of connected clients: **Site, Network, and Clients**.

The following figure shows a typical summary. Use the filters to select a specific site, network and client. Additionally, you can enter a keyword related to the target device in the Search field. Next, select a searching criteria (**Mac address, IP Address, User Authentication**). Any relevant devices meeting the search criteria will be listed.

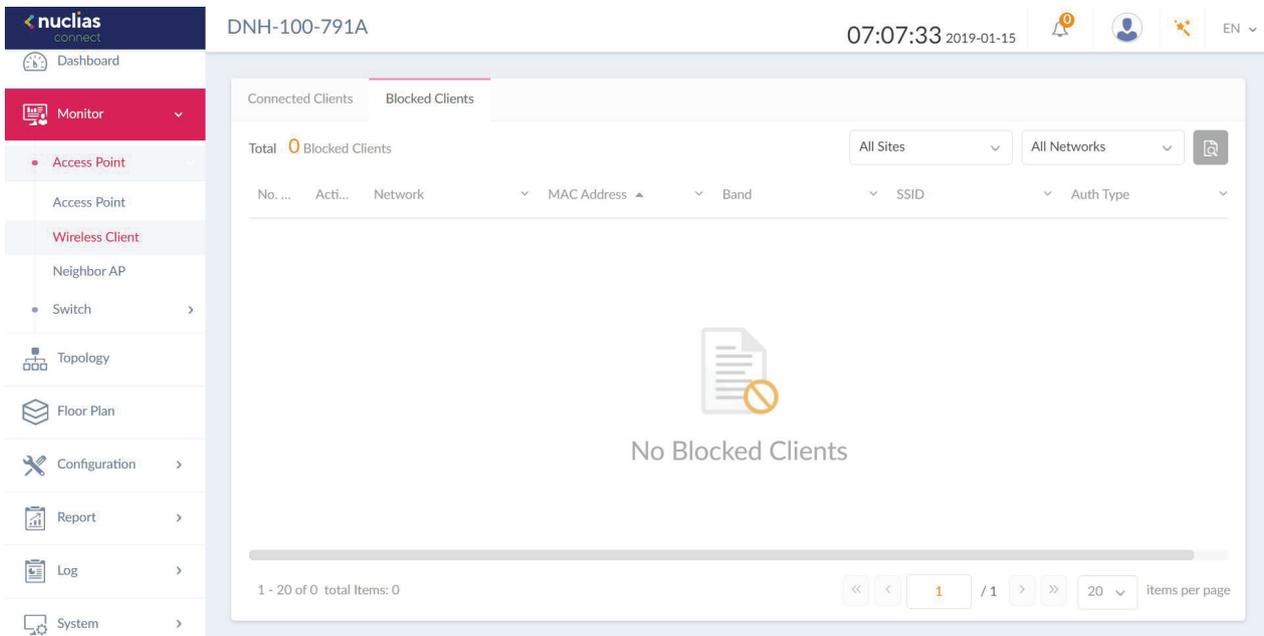

All wireless clients connected to the access points that are managed by this application are displayed. Information such as **Site, Network, IP Address, IPv6 Address, MAC Address, Auth. Type, OS (only available on captive portal clients), Upload, Download, Channel, RSSI (dBm), SNR (dB), Band, SSID, AP MAC Address, Traffic Usage, Traffic Usage(%), Last Seen, and Uptime** is displayed for each wireless client.

Nuclias Monitor Access Point Wireless Client  
**Blocked Clients**

In the Wireless Client page, select the **Blocked Clients** tab. All blocked clients detected can be viewed here. Use the **Sites** and **Networks** drop-down menu to select a Site and Network. Click  to start the search. Any relevant devices meeting the search criteria will be listed.

The summary contains the following information: **No.**, **Action**, **Network**, **MAC Address**, **Band**, **SSID**, and **Auth. Type**.

Nuclias Monitor Access Point Wireless Client

Neighbor AP

Navigate to **Monitor > Access Point > Neighbor AP** on the left panel to view the neighbor AP list. To enable this function, go to **Configuration>Profile Settings>Site>Network>Wireless Resource>Neighbor AP Detection** and click **Enabled**.

Field	Description
<b>BSSID</b>	Displays the MAC address of the AP's wireless interface.
<b>Detected by</b>	Displays the mac address of AP that the AP was scanning.
<b>Status</b>	Displays the status of AP (Unknown, Known, and Managed).
<b>SSID</b>	Displays the name of the wireless network.
<b>Security</b>	Displays the security status indicating whether encryption is used.
<b>RSSI</b>	Displays the RSSI that the AP was detecting.
<b>BW(MHz)</b>	Displays the channel width that the AP was using.
<b>Channel</b>	Displays the channel setting that the AP was detected on.
<b>Supported Modes</b>	Displays the list of modes that the AP was supported.

## Nuclias Connect

## Monitor

## Switch

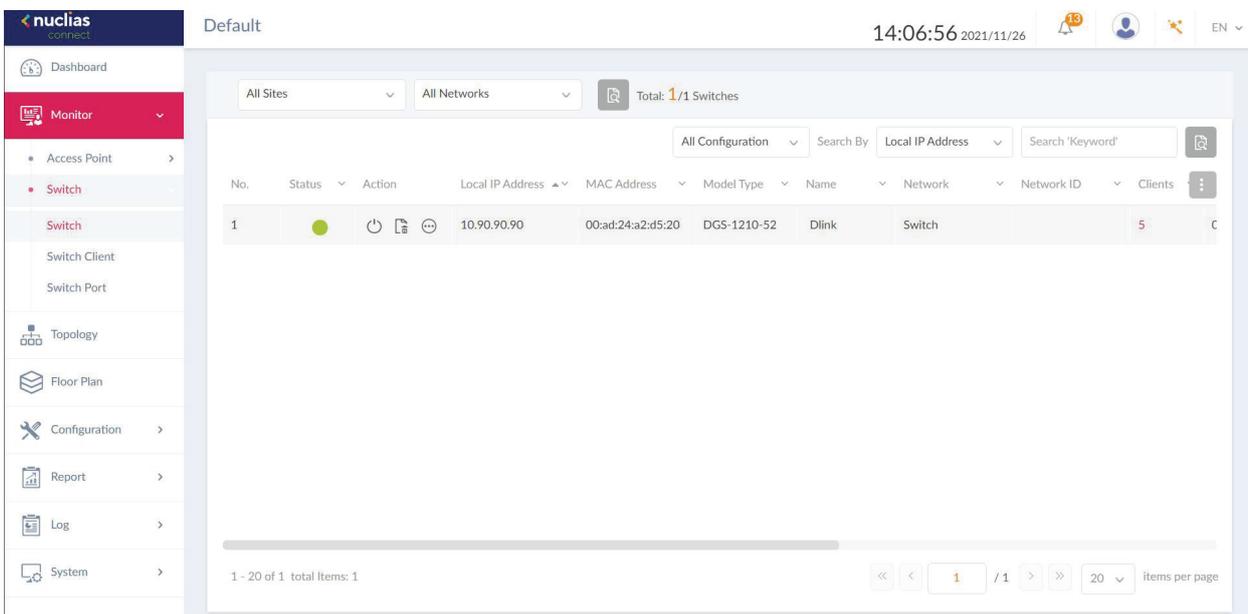

## Switch

Go to **Monitor > Switch** and use the Site and Network filter to locate the device you'd like to monitor. On this page, you can view a summary of the devices managed by the application. The summary includes the following: **Status, Local IP Address, NAT IP Address, MAC Address, Model Type, FW Version, HW Version, Serial Number, Name, Location, Site, Network, Network ID, Clients, Power Budget, CPU Usage, Memory Usage, Ports, Use Configuration, Last Seen, Uptime** and **Power Delivered**.

Select a configuration type (**Profile, Standalone, All**) and attribute (**Local IP Address, MAC Address, Model Type, FW Version, Name, Ports**) to narrow down the search field or enter a keyword related to the target device in the Search field. Click  to start the process. Any relevant devices meeting the search criteria will be listed.

Under the Action panel, click  to restart your device. Click  to move the device to Unmanaged. Click  to enter the Device Detail Page.

Key Fields	Description
<b>Name</b>	Displays user-defined name of the switch. Empty if no name is given. Click the column to revise or create a name. The max length of the name is 63 characters.
<b>Location</b>	Displays the location of the switch. Click the column to revise or create a name for the location. The max length for the location name is 32 characters.
<b>Clients</b>	Displays the total number of clients connecting to the switch. Click on the Clients number to be directed to the Switch Client page.
<b>Ports</b>	Displays the total number of ports on the switch. Click on the ports to be directed to the Switch Port page.
<b>Use Configuration</b>	Displays the configuration mode (Profile/ Standalone). <ul style="list-style-type: none"> <li>Profile: Devices under profile mode share the same configurations in the profile.</li> <li>Standalone: Devices have their own configurations, and does not get affected by profile.</li> </ul>
<b>Last Seen</b>	Displays the last connected time of the switch.
<b>Uptime</b>	The activating time of the switch after reboot.

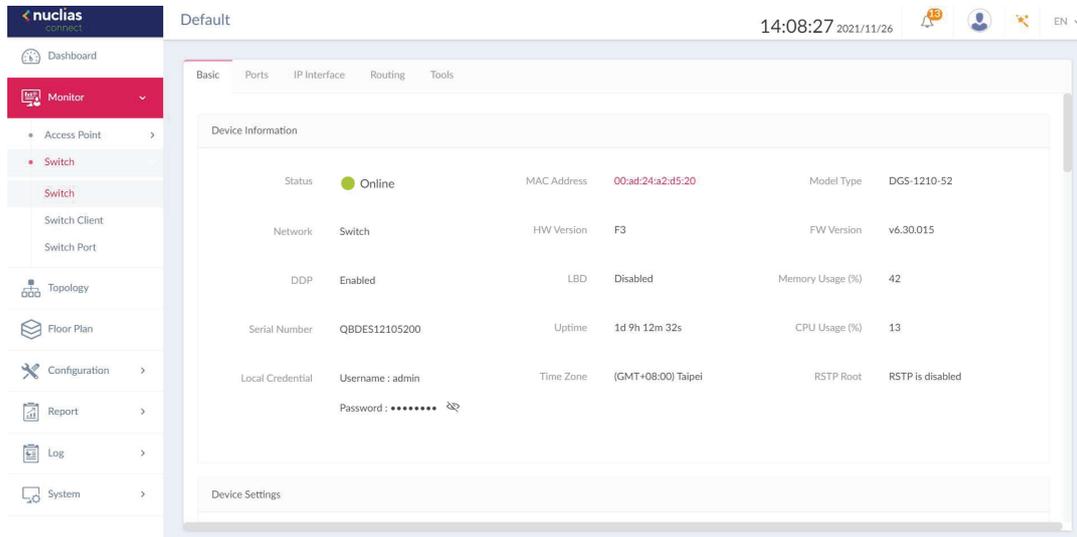

Nuclias Connect Monitor Switch Device Detail Page

Basic

The device detail page displays comprehensive information of your switches and allows users to configure the ports, IP interface, route settings, and many more. Navigate to **Monitor > Switch**, and click **Link to Device Detail Page** under Action.

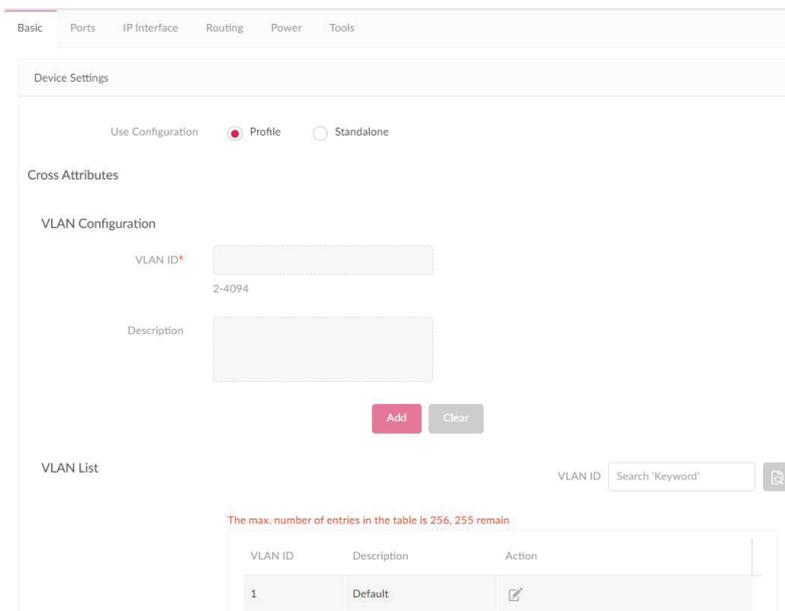

On the **Basic** tab, you can configure your device and view a summary of Device Information. The following information is displayed under the **Device Information** section: **Online Status, Network, DDP, Serial Number, Local Credential, MAC Address, HW Version, LBD, Uptime, Time Zone, Model Type, FW Version, Memory Usage, CPU Usage, and RSTP Root.**

Key Fields	Description
<b>DDP</b>	Displays the DDP (D-Link Discovery Protocol) settings of the switch.
<b>Local Credential</b>	Displays the username and password for local GUI/console.
<b>LBD</b>	Displays the LBD (Loopback Detection) settings of the switch.
<b>RSTP Root</b>	Displays the root bridge and its priority of the spanning tree.

In the **Device Settings** section, select a use configuration (Profile or Standalone). If Profile is selected, the subsequent settings, such as VLAN and IGMP Snooping will be fixed. If Standalone is selected, the above-mentioned settings will be available for editing.

Under **VLAN Configuration**, you can set up a VLAN by entering a VLAN ID (2-4094) and a description for ease of identification. Click Add to create, or Clear to cancel. The created VLAN IDs will be displayed under the VLAN list. Enter a keyword in the search field and click to locate a VLAN ID. Click to edit the ID or click to delete it.

Nuclias Connect Monitor Switch Device Detail Page

Basic

**IGMP Snooping** is disabled by default. When use configuration is set to **Standalone**, you can enable IGMP Snooping. Enter the VLAN to complete the process.

In the **Uncross Attributes** section, features that cannot be configured via profile will be listed here. Enter a name, location, and use the drop down menu to select a STP Bridge Priority. Click Apply to complete the settings.

IGMP Snooping Configuration

IGMP Snooping  Enabled  Disabled

VLAN   
1-4094, e.g. 1-4,7,9 or All.

Uncross Attributes

Name

Location

STP Bridge Priority

Apply

In the **IP Connect** section, you can deploy primary connections. Choose a type of IP (DHCP or Static IP), and enter a Local IP Address, VLAN (VLAN ID), Netmask, Gateway. If DHCP is selected, enter the DNS. If static IP is selected, enter a Primary DNS, Secondary DNS, Third DNS. Click **Apply** to complete the set up.

IP Connect

Type  DHCP  Static IP

Local IP Address\*

VLAN\*  52 member ports belonging to this VLAN currently.

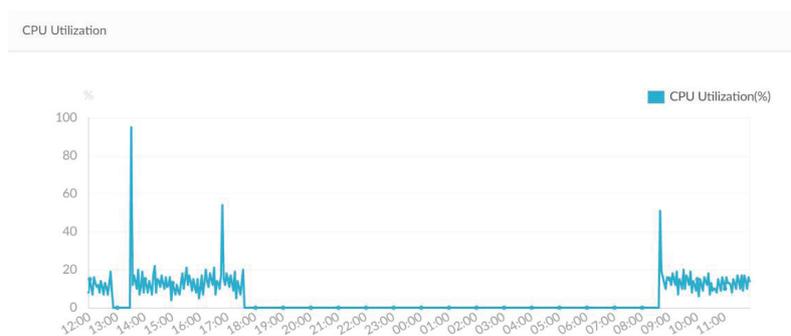

Netmask\*

Gateway\*

DNS

Apply

In the **CPU utilization** section, a CPU Utilization graph is displayed. On the Y axis shows the percentage of CPU utilization. On the X axis shows the time by hour.

Nuclias Connect Monitor Switch Device Detail Page

Ports

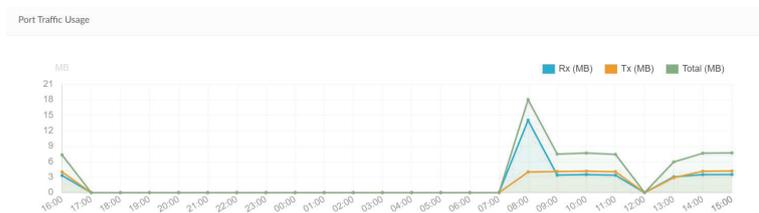

Under the Ports tab, a port status overview is presented. The graph displays a range of colors and icons to inform users of the status of each individual port. Clicking on the port icons will direct users to the **Port Detail** page of the specified port.

Here's a summary of all the statuses and what they represent:

Status	Description
Green	Connected to Gigabit Ethernet
Orange	Connected to 10/100Mbps Ethernet
Dark Gray	Port disconnected
Light Gray	Port disabled
⚡	Powered by PoE
m	Port mirrored
Red	Error detected
m ⚡	PoE+Mirror

In the **Port Traffic Usage** section, a graph indicating Rx and Tx usage based on time is presented.

In the **Port Information** section, you can view a summary of all active and inactive ports. The summary includes information such as **port number, Aggregate link status, Tx/Rx/Total bytes, used power, PoE, Port type, VLAN, Allowed VLANs, Port State, PoE Supply Schedule, RSTP, LBD, DDP, Port Shutdown Schedule, Mirror, Access Policies, LLDP, and Port Name.**

Use the **Search By** drop down menu to select between VLAN and Port, and select a **Port Type** (Access, Trunk, or all) to narrow down the search, or enter a keyword to locate a port.

Port Information

Search By: VLAN | Port Type: All Type | Search 'Keyword'

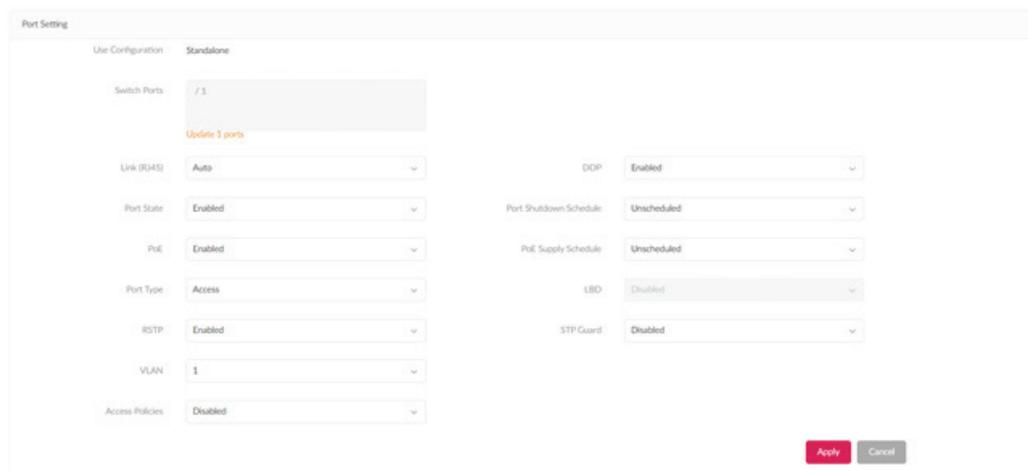

<input type="checkbox"/>	Port	Aggregate	Link	Tx Bytes	Rx Bytes	Total Bytes	Used Power...	PoE	Port Type	VLAN	Allowed
<input checked="" type="checkbox"/>	1	-	Auto / Link down	0.00 (MB)	0.00 (MB)	0.00 (MB)	0.0 (W)	Enabled	Access	1	
<input checked="" type="checkbox"/>	2	-	Auto / Link down	0.00 (MB)	0.00 (MB)	0.00 (MB)	0.0 (W)	Enabled	Access	1	
<input checked="" type="checkbox"/>	3	-	Auto / Link down	0.00 (MB)	0.00 (MB)	0.00 (MB)	0.0 (W)	Enabled	Access	1	

Key Fields	Description
<b>Aggregate</b>	Displays the port-channel ID and aggregate type (static/LACP).
<b>VLAN</b>	Displays the native VLAN ID of Trunk mode or the VLAN ID of Access mode. In addition, it also indicates the Voice VLAN ID when display.
<b>Allowed VLANs</b>	Displays the allowed VLAN ID when the Port Type belongs to Trunk.

Nuclias Connect Monitor Switch Device Detail Page

Ports

To make changes to a port or port group on the switch, first make sure the User Configuration is set to Standalone in the Device Settings section. Next, check the boxes next to the port(s) you'd like to change. Click  to edit. Scroll down to access the Port Settings. Once the changes are made, click **Apply** to update the changes.

Field	Description
<b>Port Shutdown Schedule</b>	Apply a time profile to the port shutdown function. The time profile is created in the time profile page.
<b>PoE Supply Schedule</b>	Apply a time profile to the PoE supply function.
<b>Port Type</b>	Type: Switch ports can be configured as one of the following two types. (1) Trunk: Trunk port allows the selected port to accept/pass 802.1Q tagged traffic. <ul style="list-style-type: none"> <li>Native VLAN: All untagged traffic will be placed on this VLAN. The range is 1-4094.</li> <li>Allowed VLANs: Only selected VLANs are able to traverse this link. The range is All/1-4094.</li> </ul> (2) Access: Access port places all traffic on its defined VLAN. <ul style="list-style-type: none"> <li>Access VLAN: All traffic is placed on this VLAN. The range is 1-4094.</li> <li>Access policy: Apply a restriction policy to this port.</li> </ul> * Disabled: All devices can access this port. * Static MAC Whitelist: Only the devices with MAC addresses specified in this list can access this port. * Port Security Delete-on-time Mode: All learned MAC addresses will be purged when an entry is aged out or when the user manually deletes these entries. Users can configure the number of dynamic learned entries via "Dynamic whitelist size limit". When the total number of "Dynamic Whitelisted MACs" exceeds the value of "Dynamic Whitelist Size Limit", all subsequent MAC address will be denied access to this port. A table displaying dynamically learned MAC address is available. * User defined access policy: Apply a policy name defined via Access Policy Page.

In the **Aggregate Management** section, you can combine a minimum of 2 to 8 network connections into a link aggregation group. From the Port-channel ID drop-down menu, select between 1 to 8. Next, select an aggregate type, **LACP** or **Static**. From the Port list, select 2 to 8 ports to form a link aggregation group. Click **Add** to form, or **Clear** to cancel.

Under the Port-channel List, you'll see a summary list of link aggregation you have created. The summary shows the Port-channel ID, Aggregate Type and Port numbers. Beneath the Action field, click  to edit, or  to delete. Click Apply to save the changes.

Key Fields	Description
<b>Port</b>	Displays the port number of the switch to which the client is connected to. Click the Port number to be directed to port detail page
<b>LLDP</b>	Displays the LLDP information of neighbors.
<b>Manufacture</b>	Displays the Manufacture name of the remote device via LLDP.
<b>Last Seen</b>	Displays the last time that the client was seen on the network.

Nuclias Connect Monitor Switch Device Detail Page  
**IP Interface**

Under the IP Interface tab, you can configure the IPv4 interface and view a summary of their statuses. To create an IPv4 interface, go to **IPv4 Interface**, select a **VLAN ID**, and choose to **Enable** or **Disable** the interface admin state. Enter an IPv4 **IP address** and **Netmask**. Click **Add** to apply the IP interface to a VLAN, or **Clear** to remove the entered values.

The screenshot shows the 'IPv4 Interface' configuration form. It has tabs for 'Basic', 'Ports', 'IP Interface', 'Routing', and 'Tools'. The 'IP Interface' tab is active. The form contains the following fields:

- VLAN ID: A dropdown menu with '1' selected.
- State: A dropdown menu with 'Disabled' selected.
- IP Address\*: An empty text input field.
- Netmask\*: An empty text input field.

At the bottom right of the form, there are two buttons: 'Add' (in pink) and 'Clear' (in grey).

In the IPv4 Interface Table, a summary containing VLAN ID, State, IP Address, and Link Status is displayed. Beneath the Action field, click  to edit, or  to delete. Click Apply to save the changes.

IPv4 Interface Table

The max. number of entries in the IPv4 Interface table is 4, 3 remain.

VLAN ID	State	IP Address	Link Status	Action
1	Enabled	10.90.90.90 / 255.0.0.0	Up	

**Apply**

Nuclias Connect Monitor Switch Device Detail Page

Routing

In the Routing tab, you can set up static routing for IPv4 formatted addressing. Under the IPv4 Static/Default Route Settings section, enter an **IP address** or use the **Default route, Netmask, Gateway, Cost, and Backup State(Primary/Backup)**. Click **Add** to add the route settings, or **Clear** to clear the values entered.

In the **Static Route Table**, a summary of Static Route containing **Number, IP Address/Netmask, Gateway, Cost, Protocol, Backup, and Status** is displayed. Beneath the Action field, click **Delete** to delete the static route. Click **Apply** to apply the settings to the switch.

Basic Ports IP Interface Routing Tools

IPv4 Static/ Default Route Settings

IP Address\* 0.0.0.0  Default

Netmask\* 0  
e.g. 255.255.255.254 or 0-32

Gateway\*  
e.g. 172.18.192.1

Cost (1-65535)\* 1

Backup State Primary

Add Clear

The IPv4 Route Table stores the routes information of the switch. Use the **Search By** drop-down menu to select a search criteria (**Network/IP Address**) to filter your search. Click to start the search. The following information is presented in the table: **Number, IP Address, Netmask, Gateway, Interface Name, Cost, and Protocol**.

IPv4 Route Table

Search By Network Address e.g. 172.18.208.11/24

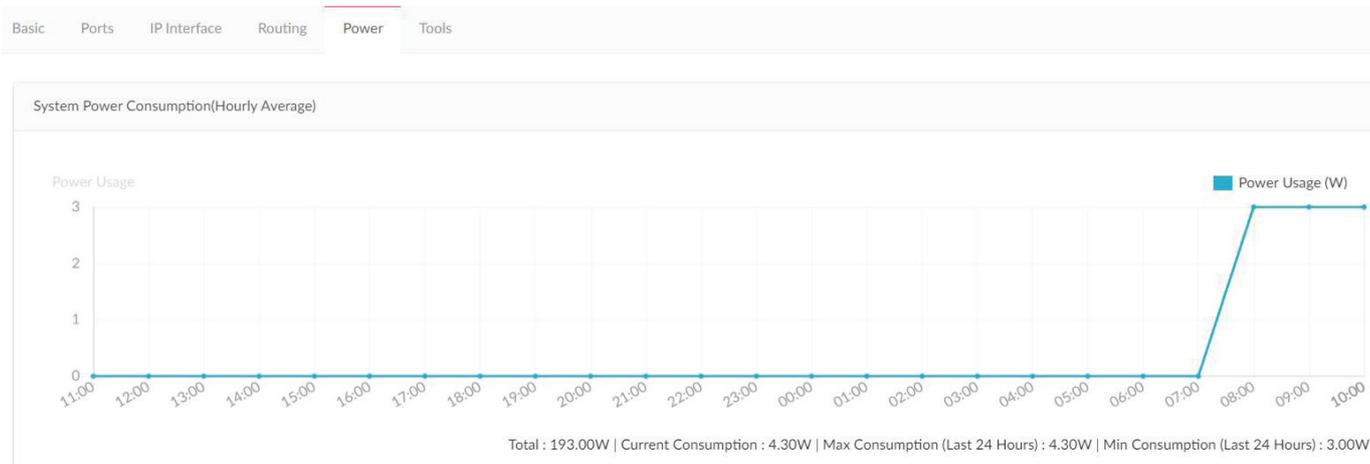

No. ...	IP Address	Netmask	Gateway	Interface Name	Cost	Protocol
1	10.0.0.0			System&nbsp;nbsp;nbsp;	0	
2	10.90.90.2			System&nbsp;nbsp;nbsp;	0	
3	10.90.90.90			System&nbsp;nbsp;nbsp;	0	
4	10.255.255.255			System&nbsp;nbsp;nbsp;	0	

Nuclias Connect Monitor Switch Device Detail Page

**Power**

Under the Power tab, the **System Power Consumption** chart and **PoE Port State** summary is displayed. Note that the Power tab will only be available if your switch supports PoE.

The System Power Consumption chart shows your switch’s power usage in watt by the hour, as well as the total, current, minimum, and maximum power consumption.

The PoE Port State summary shows the IEEE classification and the power consumption of each port on the switch. The following table describes each of the field in the summary:

Field	Description
<b>No.</b>	Port number
<b>State</b>	PoE port status.
<b>Class</b>	The IEEE classification: N/A or a value from IEEE class 0 to 4.
<b>Used(W)</b>	The amount of power that is currently allocated to PoE ports in watts.

PoE Port State

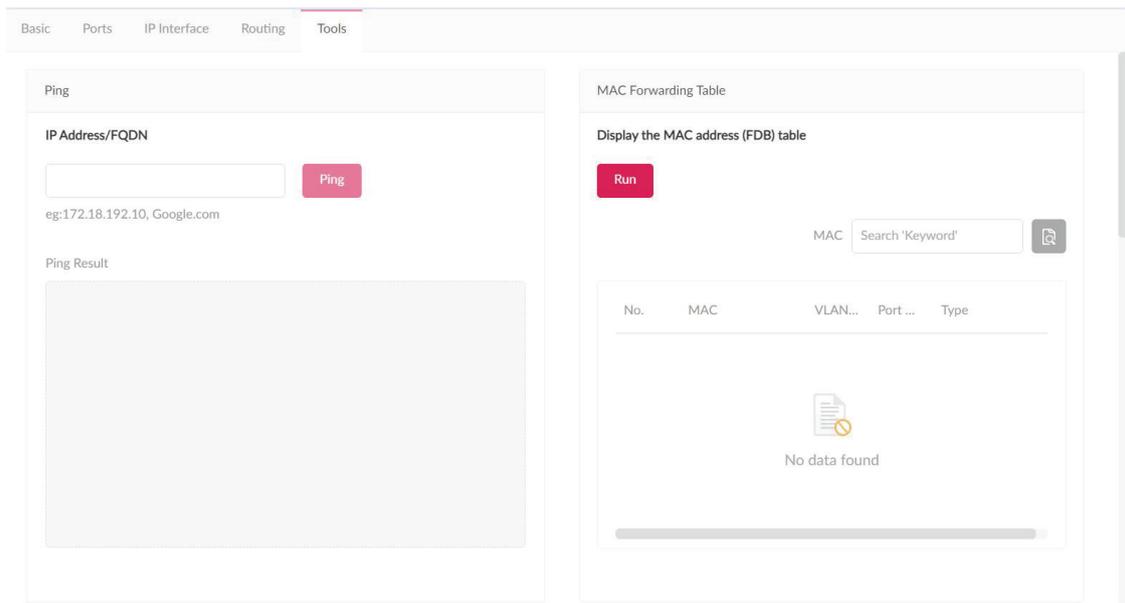

Port#	State	Class	Used (W)
1	no PD	N/A	0.00
2	no PD	N/A	0.00
3	no PD	N/A	0.00
4	no PD	N/A	0.00
5	no PD	N/A	0.00

Tools

Under the Tools tab, you're presented with the following tests to help troubleshooting: **Ping, Locate Device, Cable Test, Cycle PoE, MAC Forwarding Table,** and **Copy Configuration to Other Device.** Note that the tools are disabled when your devices are offline.

The **Ping Tool** can identify if a connection is working. Enter a host name or IP address and click **Ping** to perform the ping test. When the server received the ping signal, a summary of Ping Statistics including **Packet sent, received,** and **lost** is displayed. If no signal is received, the message "The device is unreachable" is displayed.

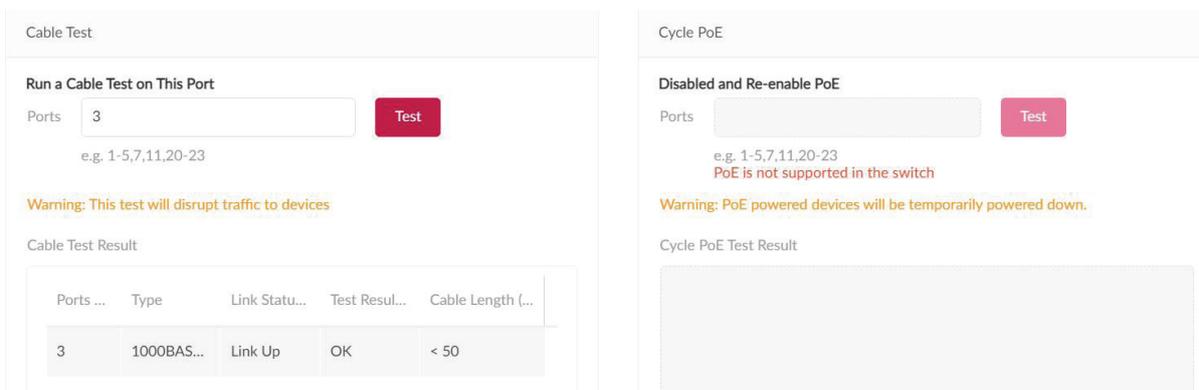

The **MAC Forwarding Table** shows a summary of **MAC addresses, VLAN, Port,** and **IP Address Type.** Press Run to begin the process. On the MAC search field, enter a relevant keyword to help locate the MAC address.

The **Cable Test** allows you to test the connectivity of one or multiple ports. Enter a number of port(s) and click Test to begin the process. The following information will be displayed: **Port number, Type, Link Status, Test Result,** and **Cable Length.** Under the Test Result field, 5 statuses can be displayed: **OK, Open, Short, Test failed and -.**

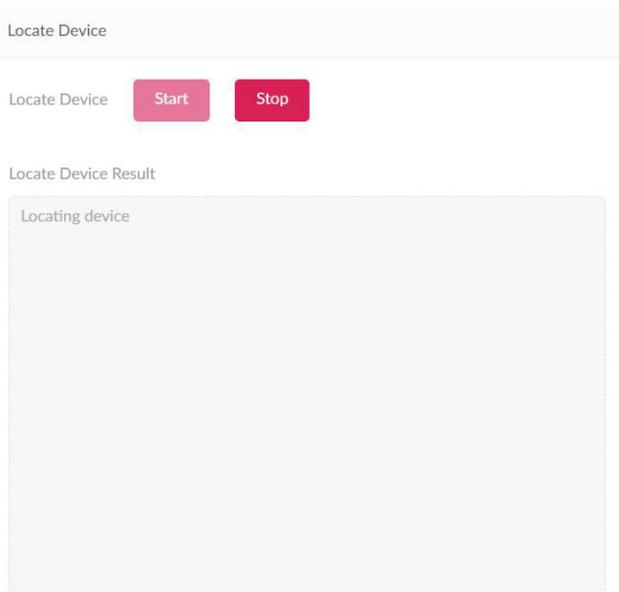

Note: The cable test will disrupt traffic to devices.

The **Cycle PoE** tool allows you to disable or enable PoE on specific ports. This tool can only be executed when PoE is enabled. Note that if the switch does not support PoE, this section will be disabled.

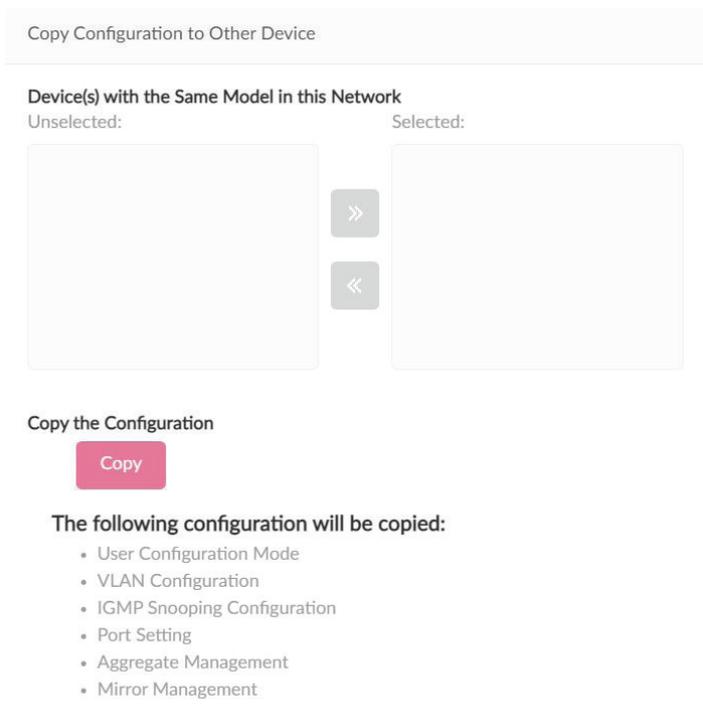

Nuclias Connect Monitor Switch Device Detail Page  
**Tools**

The **Locate Device** function can help identify unlabelled switches by lighting up the LEDs on the switch. Click the Start button to light up the switch. All LEDs will light up in green for 5 minutes. Click the Stop button to stop the light immediately. If a device is located, a message "Locating device..." will be displayed under the Locate Device Result field. If no devices can be located, a message "The device is unreachable" will be displayed. If the server receives failure message sent by the switch, a message "Locate device failed" will be displayed.

The **Copy Configuration** function allows you to copy **Configuration Mode, VLAN Configuration, IGMP Snooping, Port Settings, Aggregate Management, and Mirror Management** settings from your device to other device(s) in the network. (Note that the two device needs to be the same model.)

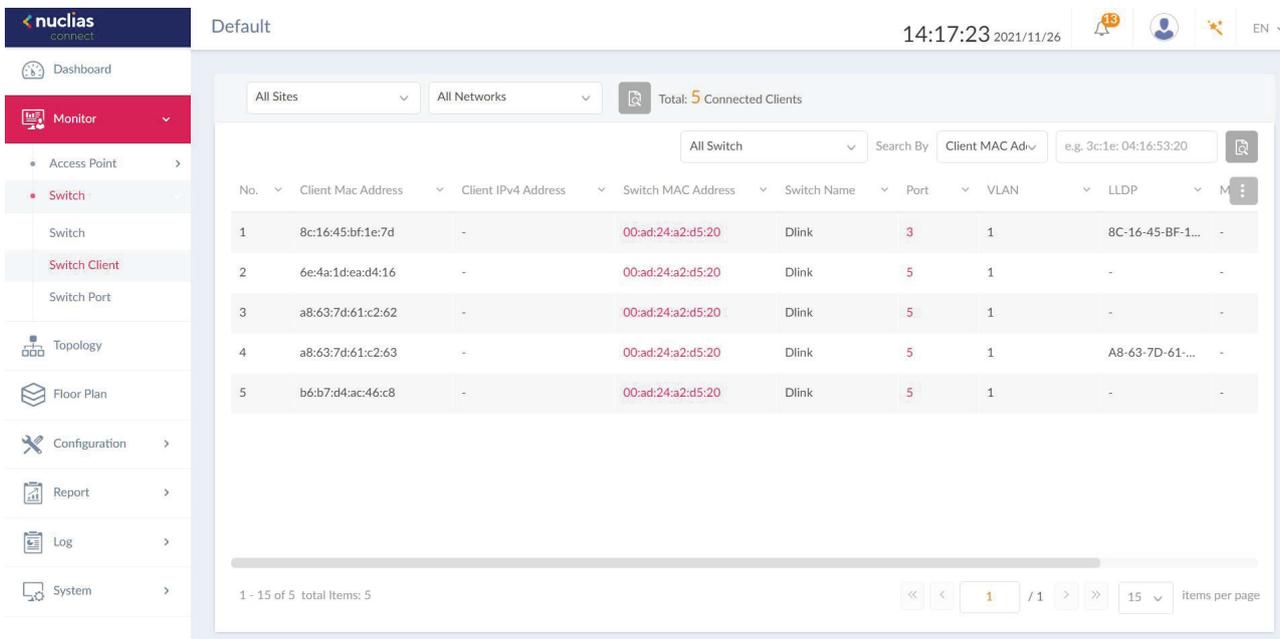

To copy the configuration, select the switch(es) in the network that will be copied. Click the **Copy** button to copy the configuration from your device to the selected device(s). A pop-up window will confirm once again. Click Copy to continue or Cancel to stop.

Nuclias Connect Monitor Switch **Switch Client**

The Switch Client page displays a cumulative list of all the active client devices that are connected to the switch network. The following information is displayed: **Number, Client MAC Address, Client IPv4 Address, Switch MAC Address, Switch Name, Port, VLAN, LLDP, Manufacturer, and Last Seen.**

Use the **Site and Network** drop-down menu to filter the information, and click  to start the search. Likewise, you can use the **Switch** and **Search By** drop-down menu to select a criteria (**Client MAC address, Client IPv4 Address, VLAN and Port**) and enter relevant keywords to narrow the search result.

Key Fields	Description
<b>Switch MAC Address</b>	Displays the MAC Address of the switch that the client is connected to. Click the MAC Address to be redirected to the switch detail page.
<b>Port</b>	Displays the port number of the D-Link switch that the client is connected to. Click the port number, it will be directed to per port page.

Nuclias Connect Monitor Switch **Switch Port**

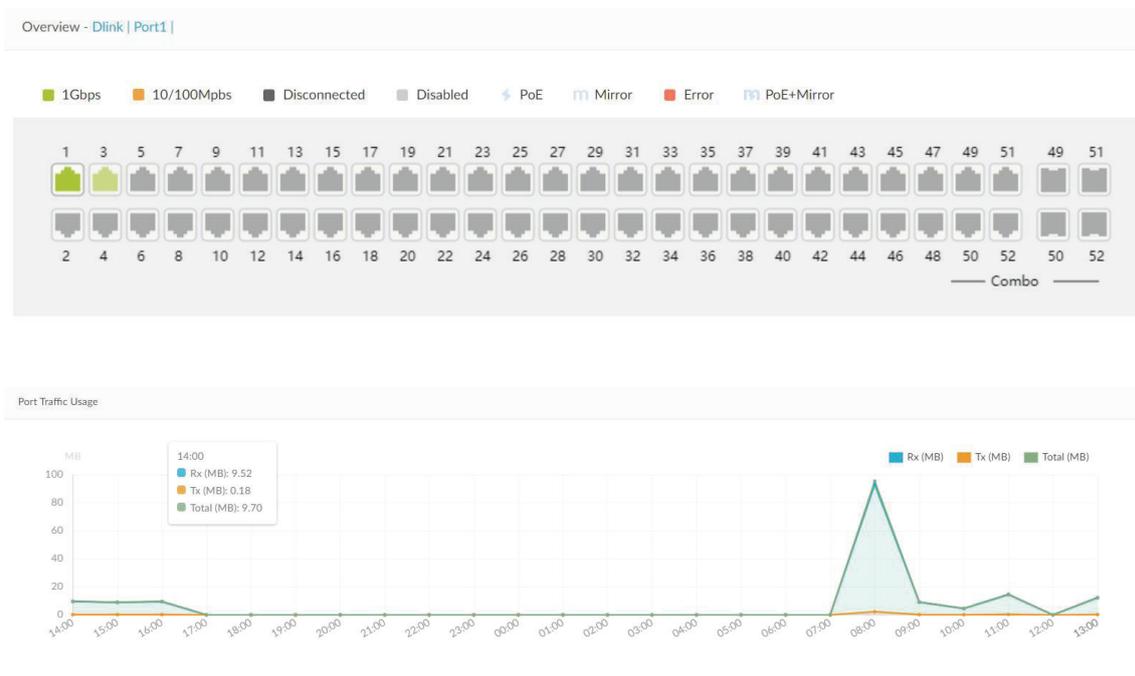

Under the Switch Port section, you can view the statuses of all the switch ports from all sites and networks. Use the Sites and Networks drop-down menu to filter the search. Click to start the search. Subsequently, use the Ports Group and Switch drop-down menu to filter the search, and select **VLAN/Port** and **Access/Trunk/All** from the **Search By** and **Port Type** drop down menu respectively. Under the Search column, enter a relevant keyword to narrow the search. Click to start the search.

The following information is displayed: **Number, Switch/Port, Aggregate, Link, Port Type, VLAN, Allowed VLANs, Port State, PoE, Ports, RSTP, LBD, DDP, Port Shutdown Schedule, PoE Supply Schedule, Access Policies, Mirror, LLDP, Port Name, Rx Broadcast Packets, Tx Boardcast Packets, Rx Multicast Packets, Tx Multicast Packets, Rx Bytes, Tx Bytes, Rx Packets, Tx Packets, and Total Bytes.**

Key Fields	Description
<b>Switch/ Port</b>	Displays the switch name and the port number.
<b>Aggregate</b>	Displays the link aggregation type (Static/LACP/-) of the port-channel group.
<b>Link</b>	Displays link configuration and link status of the port.

Under the **Action** field, click to go to the Port Detail page. You'll be directed to detail page for the specific port of the switch you have selected.

In the **Port Detail** page, you get an overview on the **Switch Port Connection Status, Port Traffic Usage, Current Configuration, Port Status, Testing Tools including Cable Test and Cycle PoE, Packet Overview and Client Information.**

# Nuclias Connect Topology

Under the Topology page, users can view the topological relations between switch devices and access points in a network. Press to zoom in, to zoom out, and to reset the topology. A basic network and device summary is displayed. The following information is included: Network name, Belonging Site, Range, Total Device/Switch, Online Device/Switch.

Select an access point or switch from the site and network. The Device and Link information will be displayed on the right side. Clicking on the green device icon will reveal detailed device information. Clicking on the link will reveal the Link information.

AP Device Detail	
Field	Description
<b>Name</b>	Displays the name to identify the switch on server. Click the name to be redirected to the device detail page. Note that the AP name must be unique to the Site.
<b>Status</b>	Displays the connection status of the AP: Online, Offline or Unmanaged. Green indicates online, red indicates offline.
<b>Local IP Address</b>	Displays the IP address.
<b>MAC Address</b>	Displays the system MAC address of the device.
<b>Model Type</b>	Displays the model type of the device.
<b>Hardware Version</b>	Displays the hardware version of the device.
<b>FW version</b>	Displays the Firmware version
<b>CPU Usage (%)</b>	Displays the CPU Usage of the device.
<b>Memory Usage (%)</b>	Displays the memory usage of the device.
<b>Upload</b>	Displays the upload traffic of the device.
<b>Download</b>	Displays the download traffic of the device.
<b>Uptime</b>	Display the activating time of the AP since after last start or reboot.
<b>Location</b>	Displays the location of the device.

### Device Information

Name: Dlink ⋮

Status: ●

Local IP Address: 10.90.90.90

MAC Address: 00:ad:24:a2:d5:20

Model Type: DGS-1210-52

Serial Number: QBDES12105200

IGMP Snooping: Disabled

HW Version: F3

FW Version: v6.30.015

CPU Usage (%): 19

Time Zone: (GMT+08:00) Taipei

RSTP Root: RSTP is disabled

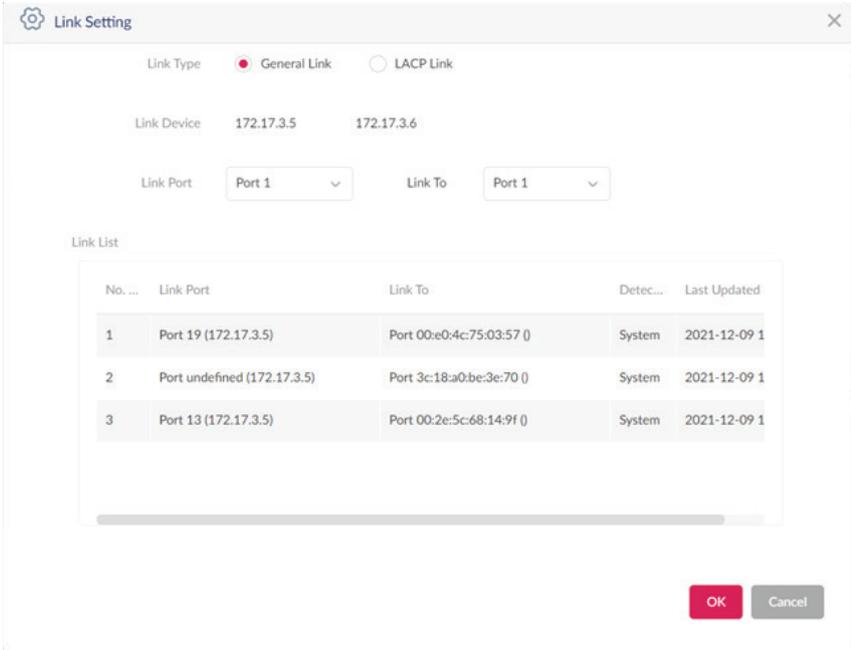

LBD: Disabled

DDP: Enabled

**Switch Device Detail**

Field	Description
<b>Name</b>	Displays the switch name on the server. Click the name to be directed to the device detail page. Note that the switch name must be unique to the Site.
<b>Status</b>	Displays the connection status of the switch: Online or offline. Green indicates online, red indicates offline and is unreachable by the server.
<b>IP Address</b>	Displays the IPv4 address. Note: User configured IPv4 address is displayed when the device is unknown.
<b>MAC Address</b>	Displays the system MAC address of the switch.
<b>Model Type</b>	Displays the model type of the switch.
<b>Serial Number</b>	Displays the serial number of the switch.
<b>IGMP Snooping</b>	Displays the state of IGMP snooping.
<b>RSTP Root</b>	Displays the root bridge and its spanning tree priority. Display format. <ul style="list-style-type: none"> <li>• "Root is X/ root bridge priority: Y" X represents device name (System name) of the root switch. Y represents bridge priority of root switch.</li> <li>• "RSTP is disabled" - When RSTP is not enabled on the switch - RSTP is enabled only on the switch, not the ports.</li> <li>• "-" When the switch is offline or doesn't relay the information.</li> </ul>
<b>DDP</b>	Display the DDP setting of the switch.
<b>LBD</b>	Display the LBD setting of the switch.
<b>IGMP Snooping</b>	Displays the state of IGMP snooping.
<b>Hardware Version</b>	Displays the hardware version of the switch.
<b>CPU Usage (%)</b>	Displays the CPU Usage of the switch.
<b>FW Version</b>	Displays the Firmware version of the switch.
<b>Time zone</b>	Displays the time zone which the device belongs to.
<b>Uptime</b>	Display the activating time of the switch after the last start or reboot.
<b>Location</b>	Displays the location of the switch.

Users can also view relations between two devices by manually defining the link. Click  to begin edit. Click on one of the targeted device icon, then click another device icon to create a linkage. Once created, the Link Setting page is displayed. Below charts explain what each field entails.

Link Setting

Link Type  General Link  LACP Link

Link Device 172.17.3.5 172.17.3.6

Link Port Port 1 Link To Port 1

Click to **choose a picture**

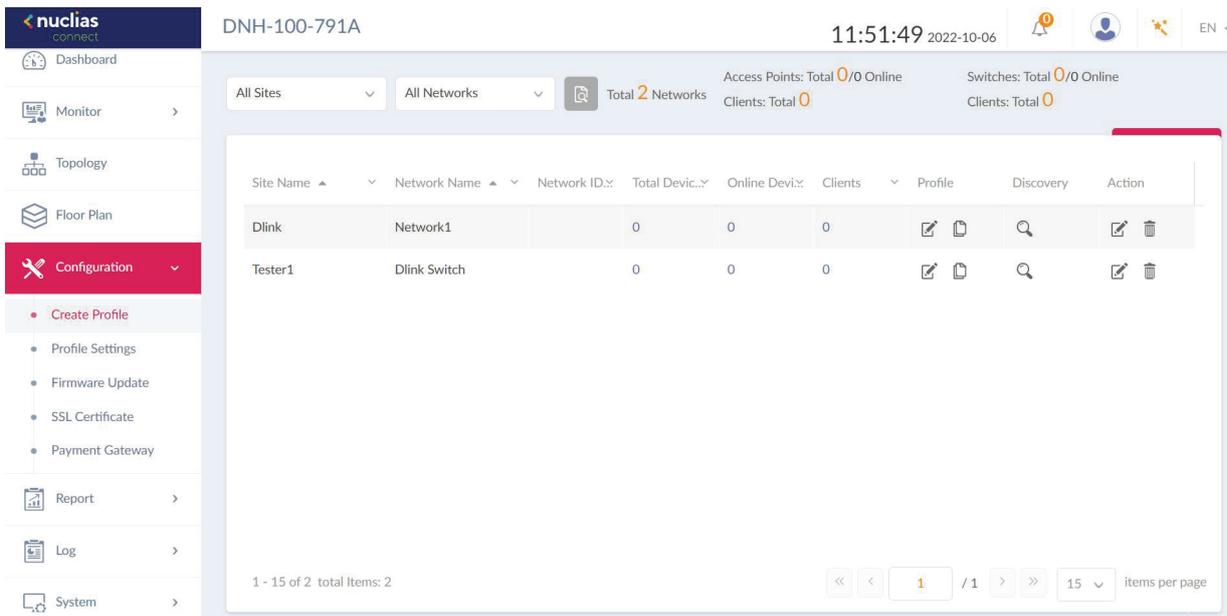

Click **“Select AP”** to choose and move devices to the correct position and save it.

Connection status(Green: Online, Red: Offline) of the device as well as information such as name, model type, IP address, etc... can be seen when hovering the mouse over to the device icon.

**Nuclias Configuration Create Profile**

The **Create Profile** function allows for the creation of new sites and networks. Navigate to **Configuration > Create Profile**, click **Add Network** to create a new site and network. All available sites and networks will be listed in the Default page.

Field	Description
<b>Edit Profile</b> 	Opens site details page. Editing is available for selected site's security, access control, and user authentication settings.
<b>Copy Profile to this Network</b> 	Copies existing profile to a designated site and network.
<b>Export Network Profile</b> 	Exports selected profile to a file (*.dat) on a local directory.
<b>Discovery</b> 	Opens the Discovery Network Settings page. From this page, you can search for devices located on L2 protocol layer or specific IP addresses / Prefix subnet IPs. Once the criteria is defined, click <b>Next</b> . Click <b>Start Discovery</b> to find the results (Configurable and Managed devices) of the search.
<b>Edit Network</b> 	Opens the Edit Network page. From this page, you can edit network settings or migrate to a new or existing site.
<b>Delete Network</b> 	Deletes the selected network configuration.

# Nuclias Configuration Create Profile **Add Network**

Click **Add Network** to create a new site and/or network. From the Site drop-down menu, selecting an existing site or select new Site and enter the name of the site in the empty field.

In the Network Name field, enter the name in which to identify the new network. The Network ID is an optional field. It will be used on REST API function, leave it as empty if not using REST API. Click **Next** to continue or **Exit** to return to the previous screen.

The Network Configurations page will appear. Enter the wireless and device settings to define the network configuration. Click **Next** to continue. To return to the previous page, click **Back** or click **Exit** to discontinue the configuration process. The Network ID field is optional and is used for REST API function. Leave it as empty if you're not intended to use REST API.

**Nuclias Configuration Create Profile Add Network**

The Discover Network Settings page is displayed. Select the data link layer (layer 2 or layer 3) to define the type of network to run on. If Layer 3 is selected, click the drop-down menu to define either an IP or a prefix segmentation. Click **+** to add additional IP/prefix segments or **Next** to continue. Click **Exit** to discontinue the configuration process.

The Start Discovery Page is displayed. Click **Start Discovery** to list all available unmanaged devices. If a device is found, select it and click **Apply** to import the network profile. Click on the **Managed** tab to select defined devices and add them to the network.

State	IP Address	MAC Address	Model Type	NMS URL	Network
Unregistered	192.168.1.166	40:9b:cd:0c:66:20	DAP-2680	192.168.1.61:8443	

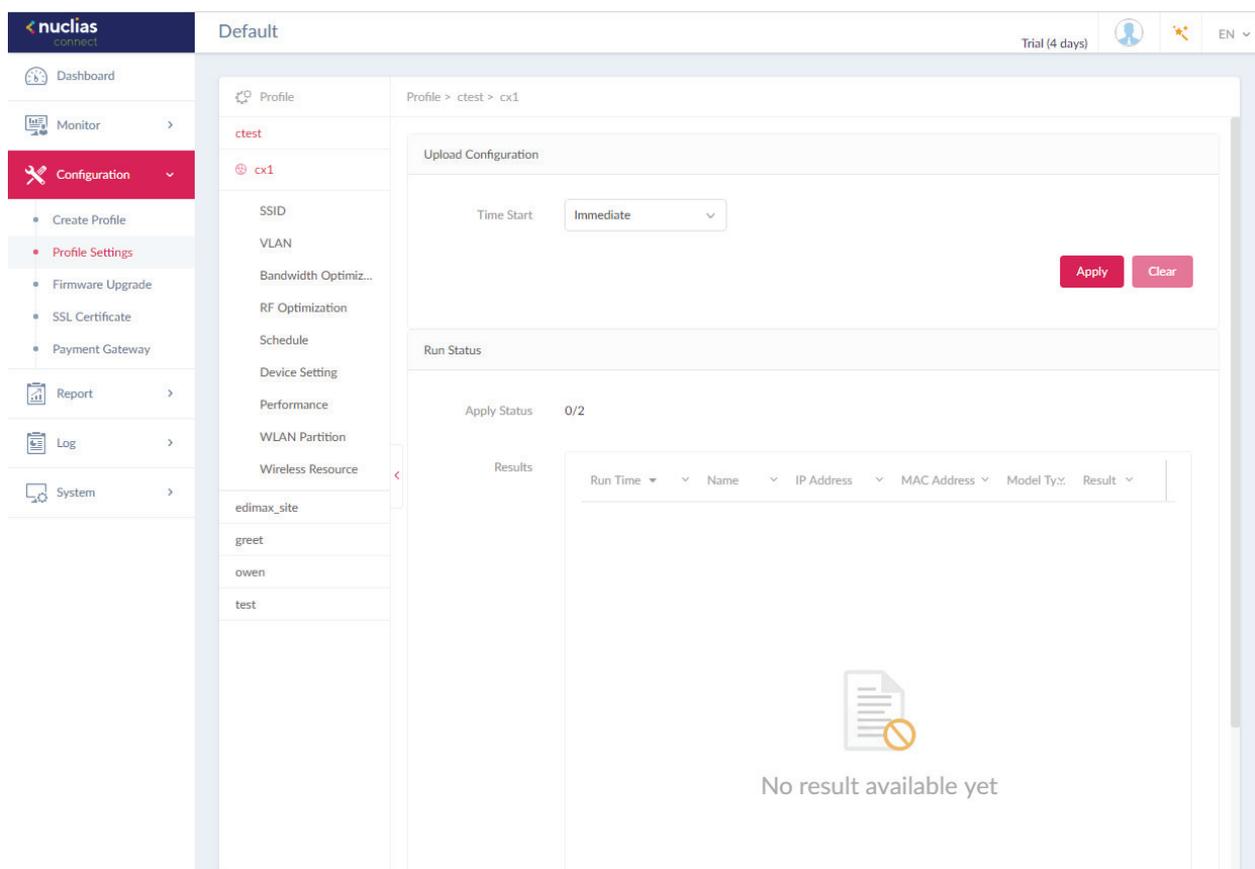

Nuclias Configuration Profile Settings

The **Profile Settings** function allows for the management of existing networks. Navigate to **Configuration > Profile Settings** to view existing sites. Select a site followed by a network to view all settings that are available for editing. site followed by a network to view all settings that are available for edit.

For Access Points, the below options are displayed: **SSID, VLAN, Bandwidth Optimization, RF Optimization, Schedule, Device Setting, Performance, WLAN Partition, and Wireless Resources.**

For Switches, the following options are displayed: Common settings (**RADIUS Server and Time Profile**) and Switch series (**Basic, IPv4 ACL, Access Policy, Port Setting, and SNMP.**)

Once a network is selected the following screen will appear. The upload configuration function is available on the **Profile Settings > [Site] > [Network]** page.

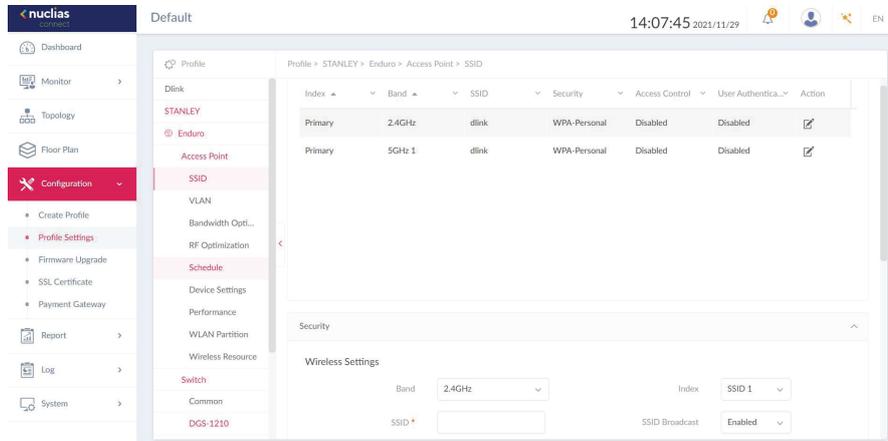

For any updates to site or network configuration to take effect, the configuration must be uploaded to the access point/switch. Under the **Upload Configuration** tab, click the **Time Start** drop-down menu and select the time **Immediate** or **Select Time** to set the time for uploading the configuration.

If **Select Time** is configured, set the day and time to upload the configuration. Once the **Time Start** is defined, click **Apply** to initiate the process.

Under the **Run Status** tab, the status of the upload configuration function will be reported. Once an update is complete, the results will be displayed in the **Results** frame.

Nuclias Configuration Profile Settings Access Point  
**SSID**

The SSID page displays the configurable parameters of a network’s wireless settings. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Access Point > SSID** to view existing settings. If the device type of the profile chosen is an Access Point, the following options are displayed: **SSID, VLAN, Bandwidth Optimization, RF Optimization, Schedule, Device Settings, Performance, WLAN Partition, and Wireless Resource.**

In the **Security** section, the following parameters can be configured:

Wireless Settings	Description
<b>Band</b>	Click the drop-down menu to select wireless frequency band.
<b>Index</b>	Click the drop-down menu to select SSID index (Parameters: Primary, SSID 1 to SSID 7). To create a new SSID, select the index parameter first.
<b>SSID</b>	Enter the wireless network name. The SSID must be the same across all frequencies. In addition, make sure the network name (SSID) on the selected access point is the same as the defined network name (SSID) on the Nuclias Connect. For further information, see the access point Basic > Wireless settings and Advanced Settings > DHCP Server > Dynamic Pool Settings, to ensure the Domain Name field reflects the defined network name (SSID) on the Nuclias Connect.
<b>SSID Broadcast</b>	Click the drop-down menu to enable or disable the wireless SSID visibility.
<b>Security</b>	Click the drop-down menu to select the wireless security protocol: Open System (no pre-shared key required), WPA-Personal, WPA Enterprise (Radius server required), WPA2-Personal, WPA2-Enterprise (Radius server required), WPA-Auto-Personal, WPA-Auto-Enterprise (Radius server required).
<b>WMM (Wi-Fi Multimedia)</b>	Click the drop-down menu to enable or disable the Wi-Fi multimedia.
<b>Fast Roaming</b>	Click the drop-down menu to enable or disable fast roaming. This function is only available for compatible models and specific software version.
Security Settings	Description
<b>Encryption</b>	Click the drop-down menu to enable or disable WEP Open System encryption. The function is only available when <b>Security</b> is set as <b>Open System</b> .
<b>Key Size</b>	Click the drop-down menu to select the WEP key size.
<b>Key Type</b>	Click the drop-down menu to select the WEP key type.
<b>Key Value</b>	Enter the open system WEP encryption key.

# Nuclias Configuration Profile Settings Access Point

## SSID

In the **Access Control** section, the following parameters can be configured:

ACL Settings	Description
<b>Action</b>	Click the drop-down menu to select the action that will applied to the clients.
<b>MAC Address</b>	Enter the MAC address of the clients that will be allowed or denied access and click <b>Add</b> .
<b>Upload MAC Address List</b>	Click <b>Browser...</b> to select the MAC address file, located on the local computer, that will be uploaded. Click <b>Upload</b> to update the MAC address list. Click <b>Download</b> to download the current MAC address list.
IP Filter Settings	Description
<b>Action</b>	Click on the drop-down menu to enable or disable the IP filter function.
<b>IP Address</b>	Enter the IP address.
<b>Subnet Mask</b>	Enter the subnet mask.

In the **User Authentication** section, the following parameters can be configured:

Field	Description
<b>Authentication Type</b>	Click the drop-down menu to select the authentication type applied to the wireless client. (Web redirection only, User name/Password, Remote Radius, LDAP, POP3, Passcode, External Captive Portal, MAC address, Click through and Social Login)
<b>Idle Timeout (2~1440)</b>	Enter the session timeout value.
<b>Enable White List</b>	Check the box to enable the white list function. This function is only available when <b>Authentication Type</b> is <b>Username/Password</b> .
<b>MAC Address</b>	Enter the MAC address of the network device that will whitelisted and click <b>Add</b> to add the address to the white list table. This function is only available when <b>Authentication Type</b> is <b>Username/Password</b> .
<b>Upload Whitelist File</b>	Click <b>Browser...</b> to select the white list file, located on the local computer, that will be uploaded. Click <b>Upload</b> to update the white list. Click <b>Download</b> to download the current white list. The function is only available when <b>Authentication Type</b> is <b>Username/Password</b> .
<b>IPIF Status</b>	Click the drop-down menu to enable or disable the use of the IP interface.
<b>VLAN Group</b>	Enter the VLAN group name.
<b>Get IP Address From</b>	Click the drop-down menu to select the IP address configuration setting.
<b>IP Address</b>	Enter the IP address of the IP interface.
<b>Subnet Mask</b>	Enter the subnet mask of the IP interface.
<b>Gateway</b>	Enter the gateway of the IP interface.
<b>DNS</b>	Enter the preferred DNS address of the IP interface.
<b>Username</b>	Enter the username. The function is only available when <b>Authentication Type</b> is set as <b>Username/Password</b> .
<b>Password</b>	Enter the password and click <b>Add</b> . Click <b>Clear</b> to clear the entered fields. This function is only available when <b>Authentication Type</b> is <b>Username/Password</b> .

Field	Description
<b>RADIUS Server</b>	Enter the RADIUS server's IP address. This function is only available when <b>Authentication Type</b> is <b>Remote RADIUS</b> or <b>MAC Address</b> .
<b>RADIUS Port</b>	Enter the RADIUS server's port number. This function is only available when <b>Authentication Type</b> is <b>Remote RADIUS</b> or <b>MAC Address</b> .
<b>RADIUS Secret</b>	Enter the RADIUS server's secret. This function is only available when <b>Authentication Type</b> is <b>Remote RADIUS</b> or <b>MAC Address</b> .
<b>Remote RADIUS Type</b>	Enter the RADIUS server's type. This function is only available when <b>Authentication Type</b> is <b>Remote RADIUS</b> or <b>MAC Address</b> .
<b>Server</b>	Enter the LDAP server's IP address. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Port</b>	Enter the LDAP server's port number. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Authentication Mode</b>	Click on the drop-down menu to select the authentication mode. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Username</b>	Enter the administrator's username that will be able to access and search the LDAP database. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Password</b>	Enter the administrator's password that will be able to access and search the LDAP database. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Base DN</b>	Enter the base domain name of the LDAP database. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Account Attribute</b>	Enter attribute for the account. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Identity</b>	Enter the name of the administrator. This function is only available when <b>Authentication Type</b> is <b>LDAP</b> .
<b>Server</b>	Enter the POP3 server's IP address. This function is only available when <b>Authentication Type</b> is <b>POP3</b> .
<b>Port</b>	Enter the POP3 server's port number. This function is only available when <b>Authentication Type</b> is <b>POP3</b> .
<b>Connection Type</b>	Click the drop-down menu to select the connection type. This function is only available when <b>Authentication Type</b> is <b>POP3</b> .
<b>Passcode List</b>	Display the configured front desk user accounts that have been assigned to this network and have already generated a passcode from the Web login page. This function is only available when <b>Authentication Type</b> is <b>Passcode</b> .
<b>External Captive Portal</b>	Click the drop-down menu to select HTTP or HTTPS. After selecting, enter the URL of the website. This function is only available when <b>Authentication Type</b> is <b>External Captive Portal</b> .
<b>Web Redirection</b>	Check the box to enable the website redirection function.
<b>Website</b>	Click the drop-down menu to select HTTP or HTTPS. After selecting, enter the URL of the website.

Field	Description
<b>Choose Template</b>	Click the drop-down menu to select the used login style. This function is only not available when <b>Authentication Type</b> is set to <b>Web Redirection Only</b> . <b>Note:</b> <ul style="list-style-type: none"> <li>Click <b>Preview</b> to preview the selected style.</li> <li>Click <b>Upload Login File</b> to upload a new style.</li> <li>Click  to delete the selected style.</li> <li>Click  to download the style template.</li> </ul>

In the **Hotspot 2.0** section, the following parameters can be configured:

Please note that Hotspot 2.0 is only available for compatible models and specific firmware version.<sup>5</sup>

Block	Description
<b>Hotspot 2.0</b>	Click the drop-down menu to enable or disable hotspot 2.0.
<b>OSEN</b>	Enable OSU Server-only authenticated layer-2 Encryption Network (OSEN) to indicate that the hotspot uses a OSEN network type.
<b>Allow Cross Connection</b>	Choose enable to allow cross connection for clients.
<b>Manage P2P</b>	Choose enable to allow P2P.
<b>DGAF</b>	This option configures the Downstream Group Addressed Forwarding. Choose enable to allow AP to forward downstream groupaddressed frames.
<b>Proxy APR</b>	Choose enable to allow proxy ARP.
<b>L2TIF</b>	Choose enable to allow Layer 2 Traffic Inspection and Filtering.
<b>Interworking</b>	Choose enable to enable the interworking function.
<b>Access Network Type</b>	Choose from drop-down menue the access network type.
<b>Internet</b>	Choose to enable or disable Internet access for this network.
<b>ASRA</b>	Choose enable if the network has Additional Steps required for Access.
<b>ESR</b>	Choose enable to indicate that emergency services are reachable through this device.
<b>USEA</b>	Choose to enable or disable USEA.
<b>Venue Group</b>	Specify group venue belongs to.
<b>Venue Type</b>	Specify type of venue.
<b>Venue Name</b>	Specify name of venue. Choose from the drop down list a language used in the name.
<b>HESSID</b>	Specify a homogenous extended service set (ESS) ID that can be used to identify a specific service provider network.
<b>WAN Link Status</b>	Set information about the status of the Access Point's WAN connection from the drop-down menu.
<b>WAN Symmetric Link</b>	Specify state of the WAN link is symmetric (upload and download speeds are the same).
<b>WAN At Capacity</b>	Specify yes if the Access Point or the network is at its max capacity, or specify no if not.
<b>WAN Metrics DL Speed (kps)</b>	The downlink speed of the WAN connection set in kbps. If the downlink speed is not known, set to 0.

<sup>5</sup> As of the time of writing, only DAP-2662 and DAP-3666 support this function.

<b>WAN Metrics UL Speed (kps)</b>	The uplink speed of the WAN connection set in kbps. If the uplink speed is not known set to 0.
<b>Network Auth Type</b>	Choose from drop-down menu the network authentication type and specify the web-address.
<b>IP Address Type Availability</b>	Choose from drop-down menu the IP address version and type that the Hotspot Operator uses and that would be allocated and available to a mobile device after it authenticates to the network. Click Delete icon to delete it from the list.
<b>Domain Name</b>	List one or more domain names for the entity operating the AP.
<b>Roaming Consortium</b>	Add service providers or groups of roaming partners whose security credentials can be used to connect to a network. Click Delete icon to delete it from the list.
<b>Nai Realm</b>	Specify list of all NAI realms available through the BSS. Click subtract icon to delete it from the list.
<b>EAP Method</b>	Specify one or more EAP methods and its authentication ID and Parameter type. Click Delete icon to delete it from the list.
<b>RFC 4282</b>	Click on drop-down menu to enable or disable RFC 4282.
<b>3gpp Cellular Network</b>	Specify a list of the 3GPP cellular networks available through the AP. Specify the MCC and MNC, then click Add icon. Click Delete icon to delete it from the list.
<b>Connection Capability</b>	Specify a list of common IP protocols (TCP, UDP, IPsec) and ports (21, 80, 443, 5060), specify its port number and the status of the IP protocol and click Add. Click Delete icon to delete it from the list.
<b>Operator Friendly Name</b>	Identifies the Hotspot venue operator and choose its language.
<b>OSU SSID</b>	Specify OSU SSID name.
<b>OSU Server URI</b>	Specify OSU Server URI
<b>OSU Method</b>	Specify a list of OSU methods by choosing its language and then specifying a method by clicking Add. Click Delete icon to delete it from the list.
<b>OSU Config</b>	Choose from drop-down menu the OSU Configu.
<b>OSU Language Code</b>	Choose a language from the drop-down menu.
<b>OSU Friendly Name</b>	Choose a language from the drop-down menu and specify the OSU friendly name.
<b>OSU Nai</b>	Specify the OSU NAI.
<b>OSU Service Description</b>	Specify a service description for the OSU.
<b>OSU Icon Language Code</b>	Specify from drop-down menu the language of the icon.
<b>OSU Icon File Path</b>	Specify location of icon file.
<b>OSU Icon File Name</b>	Specify icon file name.
<b>OSU Icon Width</b>	Specify width of the icon, in pixels.
<b>OSU Icon Height</b>	Specify length of the icon, in pixels.
<b>OSU Icon Type</b>	Specify icon file type from the drop-down menu.

Click **Add** to save the values and update the screen.

Click **Clear** to reset all settings.

# Nuclias Configuration Profile Settings Access Point

## VLAN

The VLAN page shows the configurable settings of a network's virtual LAN subnetwork settings. Navigate to **Configuration > Profile Settings > [Site] > [Network] > VLAN** to view existing settings.

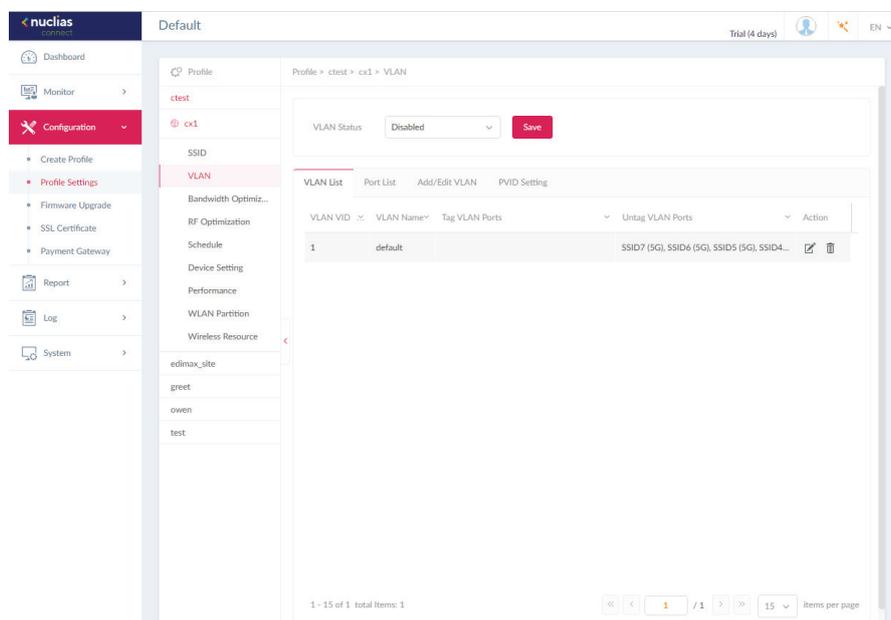

Field	Description
<b>VLAN Status</b>	Click the drop-down menu to enable or disable VLANs.

Click **Save** to save the values and update the screen.

The **VLAN List** tab will show a list of all created VLANs.

Click  to modify an existing VLAN.

Click  to remove an existing VLAN.

In the **Port List** tab, a list of port assignments is displayed. The list indicates the available tagged and untagged ports available on the access points in the network.

In the columns next to the Port Name entries, the Tag/Untag ID columns indicate if the port is a tagged member (Tag VID) or an untagged member (Untag VID) of the VLAN. In the last column, the port VLAN ID shows the connected virtual LAN segment.

In the **Add/Edit VLAN** tab, we can create a new VLAN and assign untagged ports in that VLAN. Click the Modify icon in the VLAN List tab to modify an existing VLAN.

In the **PVID Setting** tab, you can view and configure the Port VLAN Identifier (PVID) settings for access points and wireless client in this network.

In the **IP Interface List** tab, you can view a summary of IP Interface. The following information is listed: VLAN VID, VLAN Name, Get IP Address From, and IP Address. Under the action field, click  to revise, or click  to delete.

In the **Add/Edit IP Interface** tab, you can add or edit IP interface. The following fields are presented: VLAN VID, Get IP Address From, IP Address, Subnet Mask, Gateway, and DNS. Click **Save** to save your changes.

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 41 for further information.

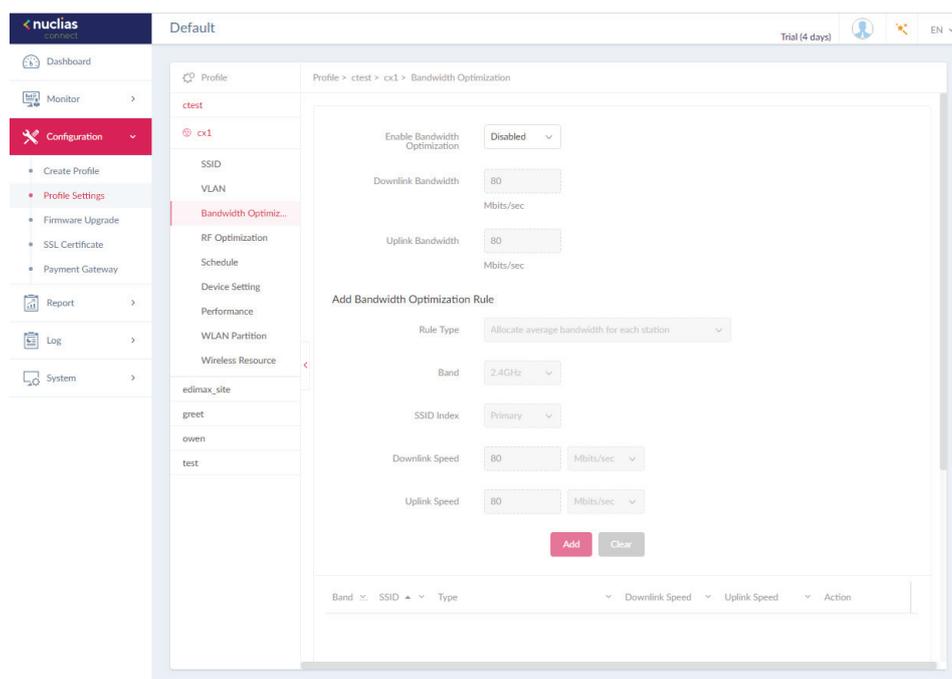

Nuclias Configuration Profile Settings Access Point

# Bandwidth Optimization

The Bandwidth Optimization page displays the configurable settings to optimize available bandwidth. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Bandwidth Optimization** to view existing settings.

Field	Description
<b>Enable Bandwidth Optimization</b>	Click the drop-down menu to enable or disable the bandwidth optimization function.
<b>Downlink Bandwidth</b>	Enter the total downlink bandwidth speed for the access points in the network.
<b>Uplink Bandwidth</b>	Enter the total uplink bandwidth speed for the access points in the network.
<b>Rule Type</b>	Click the drop-down menu to select the rule type. <ul style="list-style-type: none"> <li>Allocate an average BW for each station: Optimize bandwidth by averaging the allocated bandwidth for each client.</li> <li>Allocate a maximum BW for each station: Specify the maximum bandwidth for each connected client, while reserving available bandwidth for additional clients.</li> <li>Allocate a different BW for 11a/b/g/n station: The weight of 802.11b/g/n and 802.11a/n clients are 10%/20%/70% and 20%/80%. The AP will distribute different bandwidth for 802.11a/b/g/n clients.</li> <li>Allocate a specific BW for SSID: All clients share the assigned bandwidth.</li> </ul>
<b>Band</b>	Click the drop-down menu to select the wireless frequency band used in the rule.
<b>SSID Index</b>	Click the drop-down menu to select the SSID used in the rule.
<b>Downlink Speed</b>	Enter the downlink speed assigned to either each station or the specified SSID.
<b>Uplink Speed</b>	Enter the uplink speed assigned to either each station or the specified SSID.
<b>Add</b>	Click <b>Add</b> to add the rule into the Bandwidth Optimization Rules.
<b>Clear</b>	Click <b>Clear</b> to clear the entered rule.

Click **Save** to save the values and update the screen.

Once the settings are updated, the configuration must be uploaded to the access points. See “Profile Settings” on page 41 for further information.

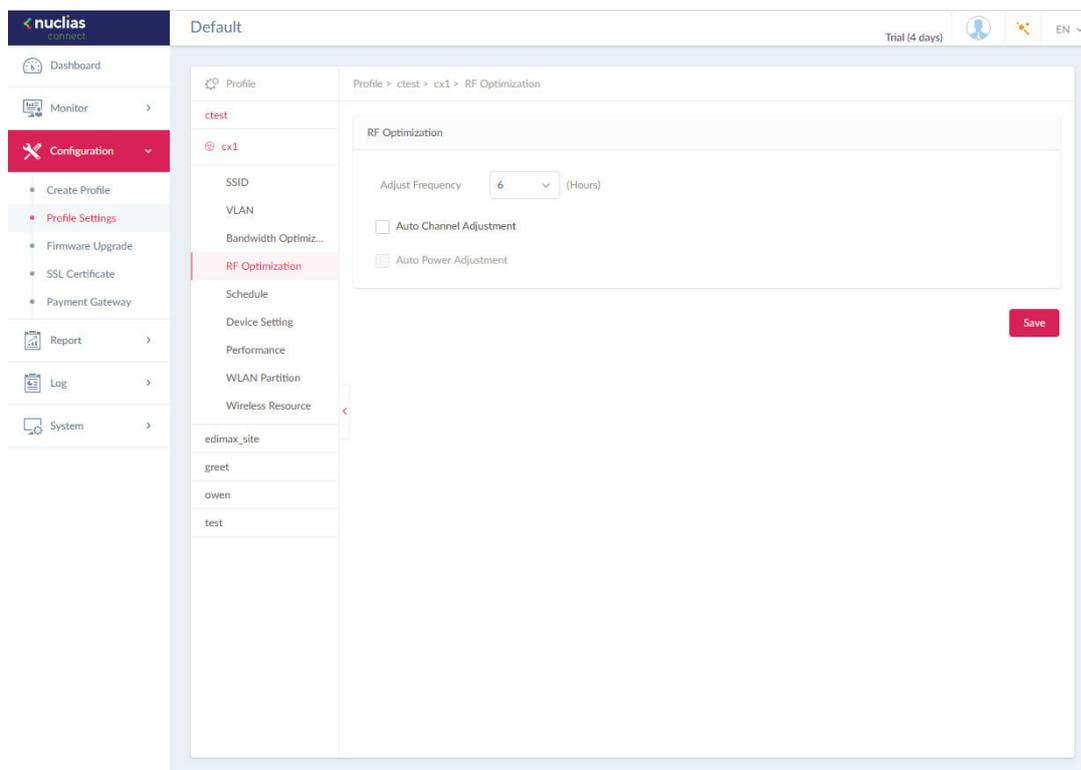

Nuclias Configuration Profile Settings Access Point

# RF Optimization

The RF Optimization page displays the configurable Radio Frequency (RF) settings used on the access points of the wireless network. Navigate to **Configuration > Profile Settings > [Site] > [Network] > RF Optimization** to view existing settings.

Block	Description
<b>Adjust Frequency</b>	Click the drop-down menu to set the rate in hours at which the RF frequency is adjusted.
<b>Auto Channel Adjustment</b>	Click the <b>Auto RF Optimize</b> radio button to enable the function to automatically adjust the channel of the client to avoid RF interference.
<b>Auto Power Adjustment</b>	Available if Auto Channel Adjustment is enabled. Click the radio button to enable the feature to automatically adjust AP radio power to optimize coverage when interference is present.

Click **Save** to save the values and update the screen.

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 41 for further information.

Nuclias Configuration Profile Settings Access Point  
**Schedule**

Under the Schedule page, you can configure a schedule to keep the SSID active within a specified time. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Schedule** to view existing settings.

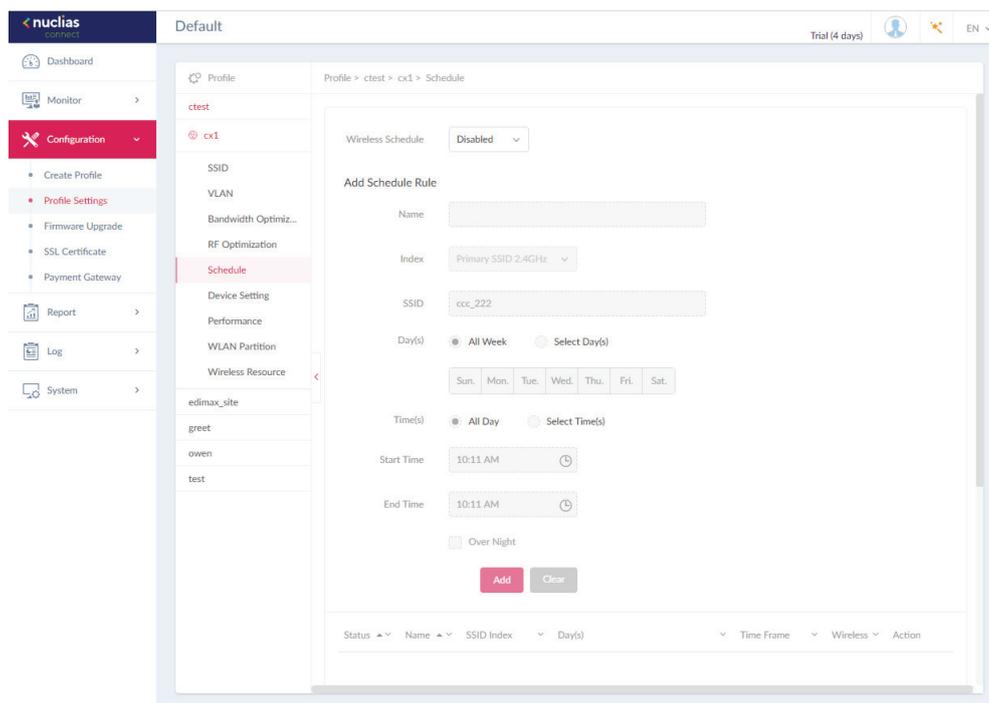

Parameter	Description
<b>Wireless Schedule</b>	Click the drop-down menu to enable or disable the wireless schedule function.
<b>Name</b>	Enter the name of the schedule rule.
<b>Index</b>	Click the drop-down menu to select SSID on which the schedule setting is applied.
<b>SSID</b>	Display the SSID name.
<b>Day(s)</b>	Click the radio button to select the active days for the schedule. <ul style="list-style-type: none"> <li>All Week: Enable the rule for the whole week.</li> <li>Select Day(s): Specifies particular day(s) to activate the rule.</li> </ul>
<b>Time(s)</b>	Click the radio button to select the active times for the schedule. <ul style="list-style-type: none"> <li>All Day: Enable the rule for the whole day.</li> <li>Select Time(s): Specifies a starting and ending time for the rule.</li> </ul>
<b>Start Time</b>	Enter the hours and minutes of the day. This function is only available when <b>Time(s)</b> is <b>Select Time(s)</b> .
<b>End Time</b>	Enter the hours and minutes of the day. This function is only available when <b>Time(s)</b> is <b>Select Time(s)</b> .
<b>Over Night</b>	Check the box to enable activity overnight.
<b>Add</b>	Click <b>Add</b> to add the rule into the schedule.
<b>Clear</b>	Click <b>Clear</b> to clear the entered rule.

Click  to modify the desired rule.

Click  to delete the desired rule.

Click **Save** to save the values and update the screen.

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 41 for further information.

# Nuclias Configuration Profile Settings Access Point

## Device Setting

The Device Settings page allows you to view and configure the login and accessibility settings for access points in this network. Advanced wireless settings can be configured on this page for both the 2.4GHz and 5GHz frequency bands. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Device Setting** to view existing settings.

Parameter	Description
<b>Username</b>	Enter the administrative username that is used to access the configuration settings for all access points in the network.
<b>Password</b>	Enter the administrative password that is used to access the configuration settings for to all access points in the network.
<b>Enable</b>	Check the box to enable the console function.
<b>Console Protocol</b>	Click the radio button to select the console protocol that is applied to all access points in the network.
<b>Time Out</b>	Click the drop-down menu to select the active console session time out value.
<b>Enable NTP Server</b>	Check the box to enable the Network Time Protocol (NTP) server function.
<b>NTP Server</b>	Enter the IP address or domain name of the NTP server.
<b>Select Country</b>	Click the drop-down menu to select the country region of APs in the network.
<b>Time Zone</b>	Click the drop-down menu to select the time zone.
<b>Enable Daylight Saving</b>	Check the box to enable the daylight saving function.
<b>DST Start (24HR)</b>	Click the drop-down menu to designate the start date and time for Daylight Saving Time (DST).
<b>DST End (24HR)</b>	Click the drop-down menu to designate the end date and time for Daylight Saving Time (DST).
<b>DST Offset (minutes)</b>	Click the drop-down menu to select DST Offset time.
<b>External Syslog Server</b>	Enter the IP address or domain name of the external syslog server.

Click **Save** to save the values and update the screen.

Once the settings are updated, the configuration must be uploaded to the related access points. See "Profile Settings" on page 41 for further information.

The screenshot displays the Nuclias web interface. The left sidebar shows the navigation menu with 'Configuration' selected. The main content area shows the 'Device Setting' page for a profile named 'ctest'. The page is divided into several sections:

- Admin:** Includes fields for 'Username' (set to 'admin') and 'Password' (masked with dots).
- Console Settings:** Includes a checked 'Enable' checkbox, a radio button for 'Telnet' (selected) and 'SSH', and a 'Time Out' dropdown menu set to '3 Mins'.
- Automatic Time Configuration:** Includes an unchecked 'Enable NTP Server' checkbox, an 'NTP Server' text input field, and a 'Country Setting' section with a 'Select Country' dropdown menu set to 'Afghanistan' and a 'Time Zone' dropdown menu set to '(GMT-12:00) International Date Line West'.
- DST Start (24HR):** Includes an unchecked 'Enable Daylight Saving' checkbox and a 'DST Start (24HR)' section with dropdown menus for 'First', 'Sunday', 'in', 'January', 'at', '00', and '00'.

## Nuclias Connect Configuration Profile Settings Access Point Performance

## 2.4GHz/5GHz/5GHz 2 (Tri-Band)

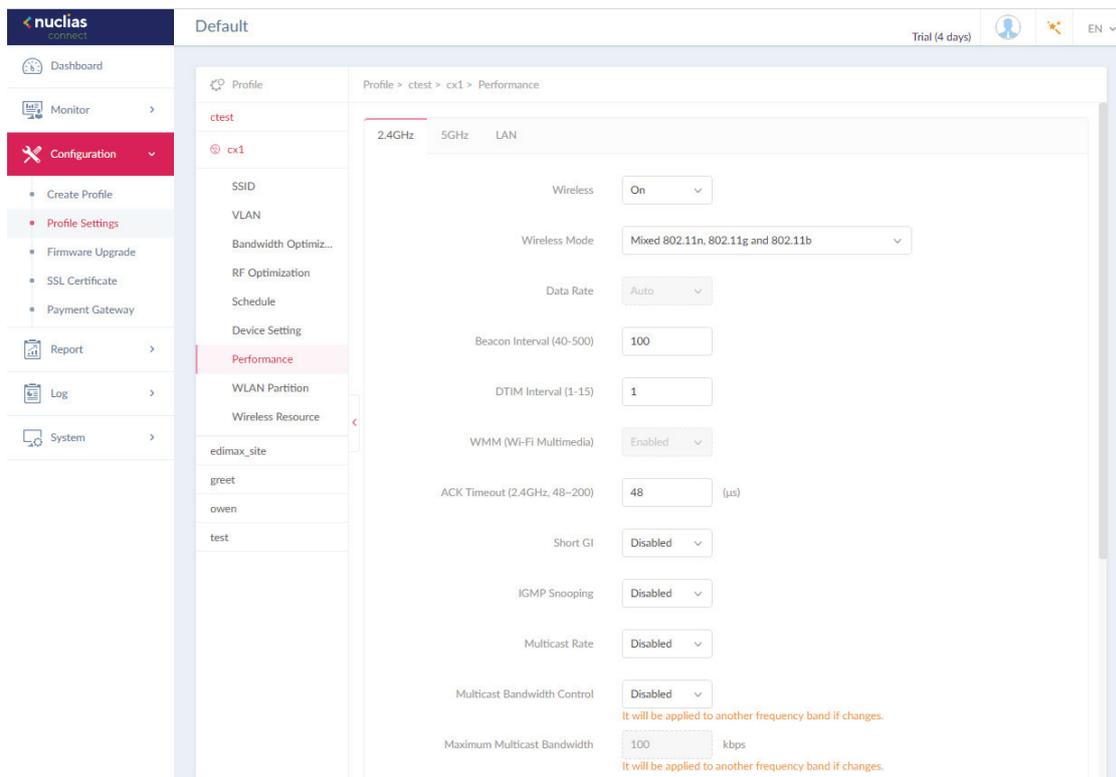

The Performance page allows you to configure the wireless performance for access points on your network. Additionally advanced wireless settings can be configured on the page for both the 2.4GHz and 5GHz frequency bands. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Device Setting** to view existing settings. Click the 2.4GHz or 5GHz tab to view existing settings.

Parameter	Description
<b>Wireless</b>	Click the drop-down menu to turn on or off the wireless band for the network.
<b>Wireless Mode</b>	Click the drop-down menu to select the wireless mode used in the network.
<b>Data Rate</b>	Click the drop-down menu to select the wireless data rate. The function is only available when <b>Wireless Mode</b> is <b>Mixed 802.11g and 802.11b (2.4GHz)</b> or <b>802.11a Only (5GHz)</b> .
<b>Beacon Interval</b>	Enter the beacon interval value. The default value is 100.
<b>DTIM Interval (1-15)</b>	Enter the DTIM interval value. The default value is 1.
<b>WMM (Wi-Fi Multimedia)</b>	Click the drop-down menu to enable or disable the Wi-Fi Multimedia (WMM) function.
<b>ACK Timeout</b>	Enter the ACK timeout value. The default value is 48.
<b>Short GI</b>	Click the drop-down menu to enable or disable the short GI function.
<b>IGMP Snooping</b>	Click the drop-down menu to enable or disable the IGMP snooping function.
<b>Multicast Rate</b>	Click the drop-down menu to select the multicast rate value.
<b>Multicast Bandwidth Control</b>	Click the drop-down menu to enable or disable the multicast bandwidth control function.
<b>Maximum Multicast Bandwidth</b>	Enter the maximum multicast bandwidth value. The default value is 100. The function is only available when <b>Multicast Bandwidth Control</b> is <b>Enabled</b> .
<b>HT20/40 Coexistence</b>	Click the drop-down menu to enable or disable the HT20/40 coexistence function.
<b>Change DHCP OFFER from Multicast to Unicast</b>	Click the drop-down menu to allow or deny the transfer of DHCP offers to unicast function.
<b>RTS Length (256-2346)</b>	Enter the RTS length value. The default value is 2346.
<b>Fragment Length (256-2346)</b>	Enter the fragment length value. The default value is 2346.
<b>Channel Width</b>	Click the drop-down menu to select the channel width used by the network.

Click **Save** to save the values.

# Nuclias Connect Configuration Profile Settings Access Point Performance

## 2.4GHz/5GHz/5GHz 2 (Tri-Band)

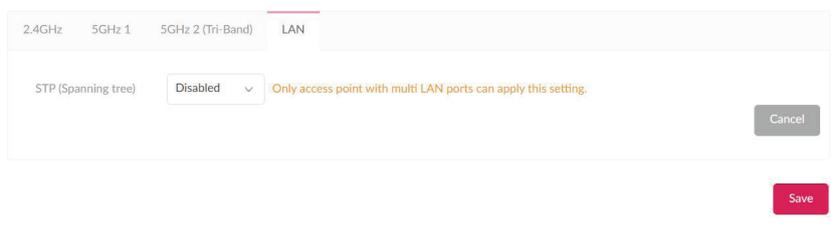

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 41 for further information.

# Nuclias Connect Configuration Profile Settings Access Point Performance

## LAN

Under the **LAN** tab, users can enable or disable **STP** (Spanning tree). STP can help ensure that no loops are created when you have redundant paths in your network. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Access Point > Performance > LAN**. Note that only access point with multi LAN ports can apply this setting.

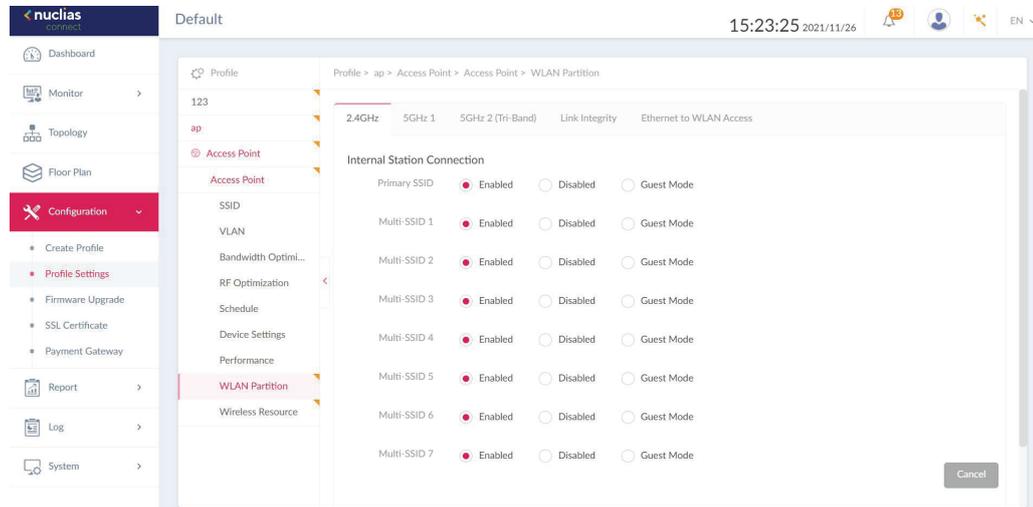

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 69 for further information.

# Nuclias Configuration Profile Settings Access Point

## WLAN Partition 2.4GHz/5GHz-1/5GHz-2 (Tri-Band)

The WLAN Partition page displays the wireless partitioning settings that allow you to enable/disable associated wireless clients from communicating with each other. Additionally, advanced wireless settings can be configured on the page for both the 2.4GHz and 5GHz frequency bands. Navigate to **Configuration > Profile Settings > [Site] > [Network] > WLAN Partition**. Click the 2.4GHz or 5GHz tab to view existing settings. Click **Save** to save the values and update the screen.

Once the settings are updated, the configuration must be uploaded to the related access points. See "Profile Settings" on page 69 for further information.

# Nuclias Connect Configuration Profile Settings Access Point

## WLAN Partition Link Integrity

The Link Integrity feature disassociates wireless segments from the AP when the LAN and AP is disconnected. Click the drop-down menu to enable or disable the wireless link integrity function.

Click **Save** to save the changes. Once the settings are updated, the configuration must be uploaded to the access points. See “Profile Settings” on page 69 for further information.

Nuclias Connect Configuration Profile Settings Access Point  
WLAN Partition **Ethernet to WLAN Access**

The Ethernet to WLAN Access feature allows Ethernet to send and receive data from associated wireless devices. Click the drop-down menu to enable or disable Ethernet to WLAN Access.

Click **Save** to save the changes. Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 69 for further information.

Nuclias Configuration Profile Settings Access Point  
 Wireless Resource **2.4GHz/5GHz-1/5GHz-2 (Tri-Band)**

The Wireless Resource function in Nuclias Connect helps provide real-time RF management of the wireless network. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Wireless Resource**. Click the 2.4GHz or 5GHz tab to view existing settings.

Parameter	Description
<b>ACL RSSI Threshold</b>	Check the box to enable ACL RSSI threshold function and click the drop-down menu to select the ACL RSSI threshold percentage.
<b>Aging Out</b>	Use the drop-down menu to select criteria to disconnect wireless clients. Available options are RSSI and Data Rate.
<b>Aging Out</b>	Click the drop-down menu to select the aging out mode
<b>RSSI Threshold</b>	When <b>RSSI</b> is selected in the Aging out drop-down menu, select a value between 10% to 100%. This parameter sets the minimum RSSI for a wireless clients to respond to a probe. If the determined value is lower than the specified percentage, the wireless client is disconnected.
<b>Data Rate</b>	Click the drop-down menu to select the data rate connection limit. The function is only available when the <b>Aging Out</b> policy is set to <b>Data Rate</b> .
<b>Connection Limit</b>	Click the radio button to enable or disable the function. Connection limit is designed to provide load balancing. This policy allows user access management on the wireless network. The exact number is entered in the User Limit field below. If this function is enabled and when the number of users exceeds this value, or the network utilization exceeds the specified percentage, the policy will not allow further client association.
<b>User Limit (0~64)</b>	Enter the user connection limit. The default value is 20.
<b>11n Preferred</b>	Click the drop-down menu to enable or disable the preferred use of 802.11n.
<b>Network Utilization</b>	Click the drop-down menu to select the network utilization percentage.

Click **Save** to save the values and update the screen.

The screenshot shows the configuration interface for the 2.4GHz/5GHz-1/5GHz-2 (Tri-Band) profile. The settings are as follows:

- ACL RSSI Threshold:**  (unchecked), 10 %
- Aging Out:**  (unchecked)
  - Aging Out: RSSI
  - RSSI Threshold: 10 %
  - Data Rate: 6 Mbps
- Connection Limit:**  (unchecked)
  - User Limit (0~64): 20
  - 11n Preferred: Enabled
  - Network Utilization: 100 %

A "Cancel" button is visible at the bottom right of the configuration window.

Once the settings are updated, the configuration must be uploaded to the access points. See "Profile Settings" on page 41 for further information.

## Nuclias Configuration Profile Settings Access Point

### Wireless Resource **Airtime Fairness**

Airtime Fairness allows you to boost overall network performance. This function sacrifices network time from the slowest devices to boost overall performance of the network.

Note: Devices identified as having slow WiFi speed can be slow from either long physical distances, weak signal strength or older legacy hardware. Navigate to **Configuration > Profile Settings > [Site] > [Network] > Wireless Resource**. Click the **Airtime Fairness** tab to view the existing setting.

Check the box to enable or disable the airtime fairness function.

Click **Save** to save the values and update the screen.

2.4GHz 5GHz 1 5GHz 2 (Tri-Band) **Airtime Fairness** Band Steering Neighbor AP Detection

Enabled Cancel

Save

Once the settings are updated, the configuration must be uploaded to the related access points. See "Profile Settings" on page 41 for further information.

# Nuclias Configuration Profile Settings Access Point

## Wireless Resource **Band Steering**

Band Steering allows dual-band-capable clients to connect to the less crowded 5GHz network, and leave the 2.4GHz network available for those clients who support 2.4GHz only.

Navigate to **Configuration > Profile Settings > [Site] > [Network] > Wireless Resource**. Click on the **Band Steering** tab to view the existing setting.

Check the box to enable or disable the wireless band steering function.

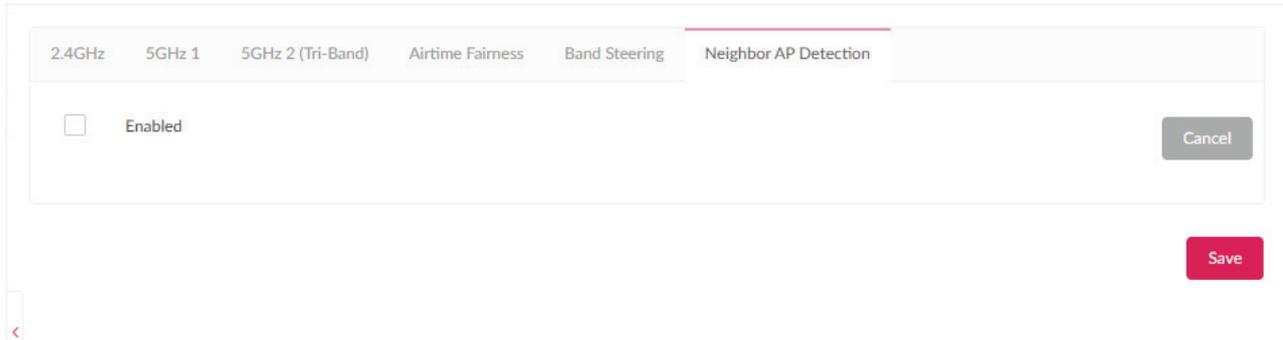

Click **Save** to save the values and update the screen.

The screenshot shows a configuration panel with several tabs: 2.4GHz, 5GHz 1, 5GHz 2 (Tri-Band), Airtime Fairness, Band Steering (selected), and Neighbor AP Detection. Below the tabs, there is a checkbox labeled "Enabled" which is currently unchecked. To the right of the checkbox is a "Cancel" button. At the bottom right of the panel is a "Save" button.

Nuclias Configuration Profile Settings Access Point  
Wireless Resource **Neighbor AP Detection**

Users can view neighbor information on a specified AP radio to determine the AP location and neighbor relationship, help locating rogue APs and plan the WLAN.

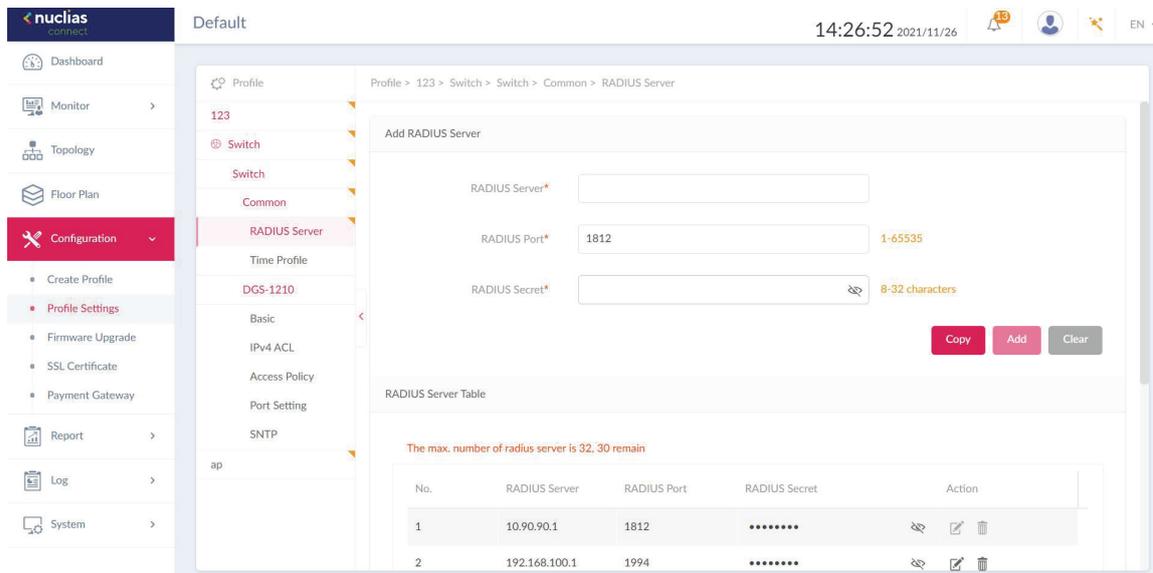

Check “**Enabled**” to enable detection and go to **Monitor>Neighbor AP** to review AP list.

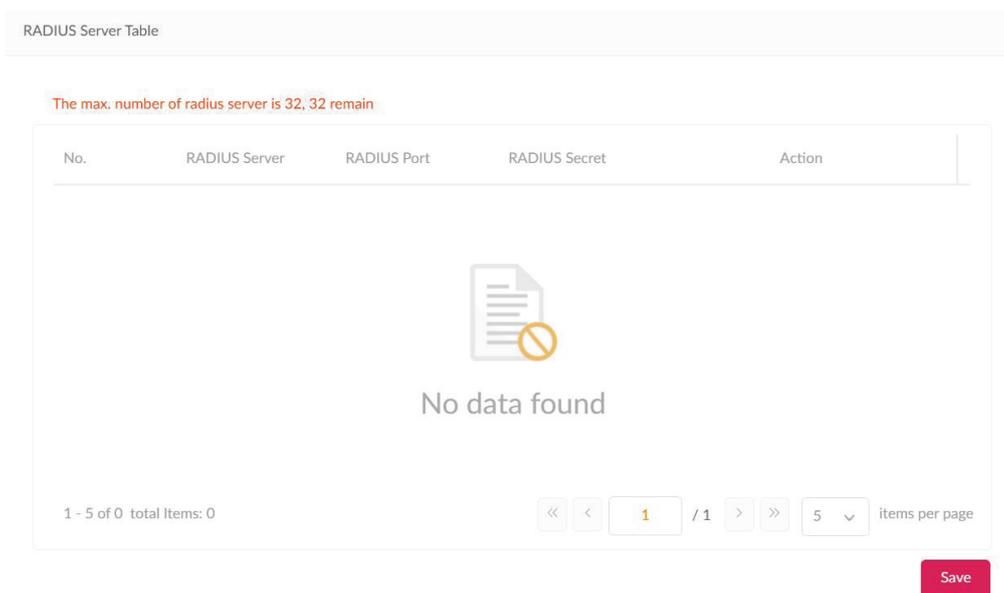

Nuclias Connect Configuration Profile Settings Switch  
Common **RADIUS Server**

In the RADIUS Server page, you can forward access requests from your switches to one or more specified remote RADIUS servers. Navigate to **Configuration > Profile Settings > Switch > Common > RADIUS Server** to set up remote RADIUS server for all switches in the network.

To add a RADIUS server, enter the RADIUS authentication server, the UDP port and the secret used to communicate with the server. Alternatively, click **Copy** to copy RADIUS server from other network. Once completed, click **Add** to add a new RADIUS server, or **Clear** to remove the entries.

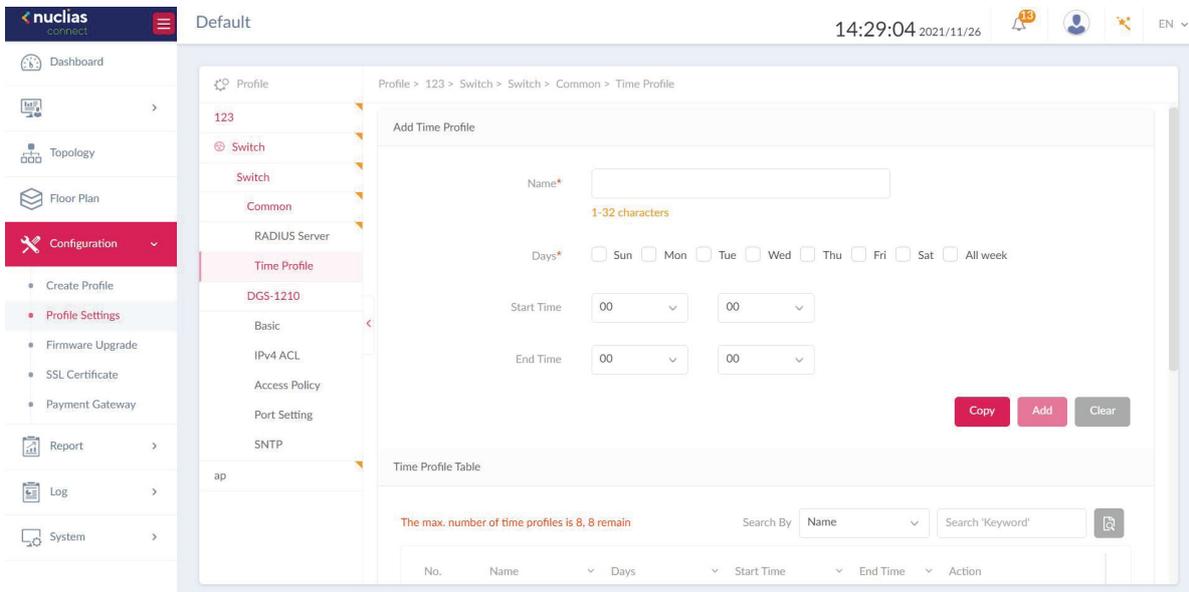

In the **RADIUS Server Table** below, a summary of all the RADIUS Servers details including the **number, RADIUS server, port** and **secret** is displayed. Under the Action field, click to edit the RADIUS server. Click to delete the selected RADIUS server. Click **Save** when completed.

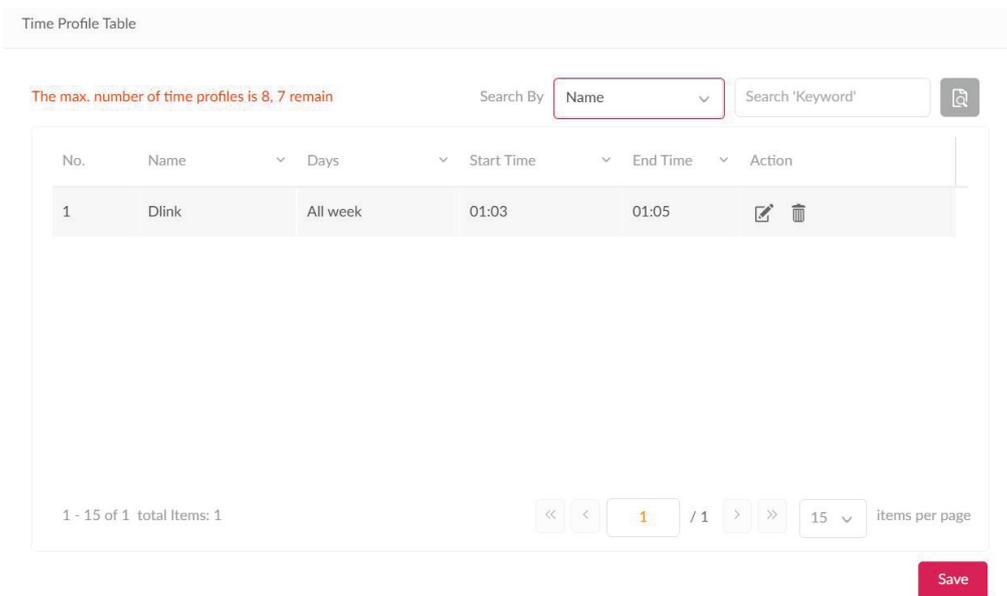

Nuclias Connect Configuration Profile Settings Switch  
 Common **Time Profile**

Under the Time Profile page, users can set up time profile for all the switches in the network. Navigate to **Configuration > Profile Settings > Switch > Common > Time Profile** to set up the time profile.

In the **Add Time Profile** page, enter a name for the profile. Select the work days for the switch. Next, enter the **Start** and **End** time using the drop-down menu. Alternatively, click **Copy** to copy the time profile from other network. Once the time is set, click **Add** to add a schedule, or **Clear** to remove all values.

In the Time Profile Table, a summary of the time profile, including the name, days, start/end time is displayed. Use the drop-down menu to filter the time profiles by either **Name** or **Days**. Enter a relevant keyword to narrow the search. Click to start the search. Under the Action field, click to edit the time profile. Click to delete the time profile. Click **Save** when completed.

Nuclias Connect Configuration Profile Settings Switch

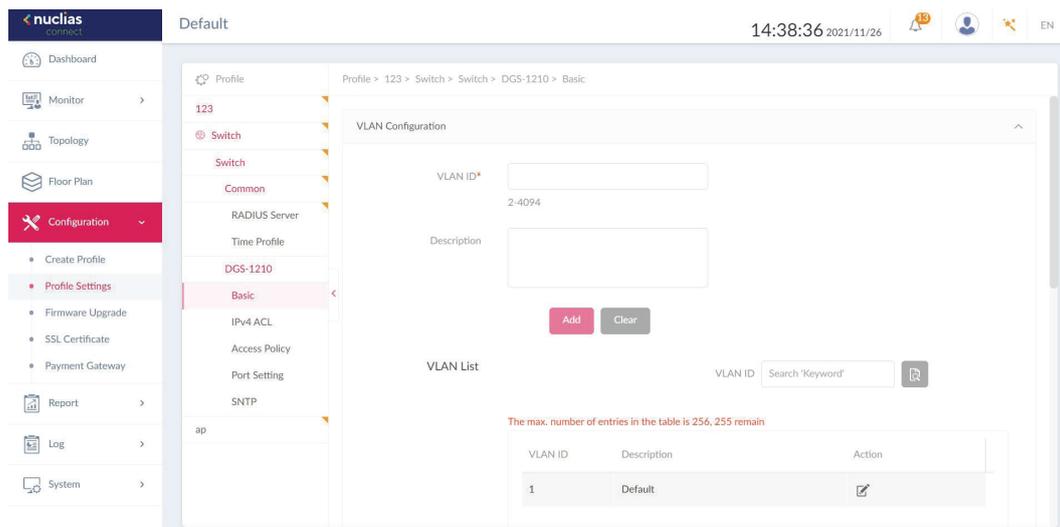

Basic

Under the **Basic** tab, users can configure global switch settings such as VLAN, IGMP Snooping, Quality of service and more. Navigate to **Configuration > Profile Settings > Switch > Your Device > Basic** to configure the switch. Below describes the functionality of each configuration options.

**VLAN Configuration**

In this section, users can add, edit, or delete a VLAN. Enter a VLAN ID in the VLAN ID field, the range of 2 to 4094. Next, enter a description for the VLAN. Once complete, click Add to add a VLAN, or Clear to clear the entry.

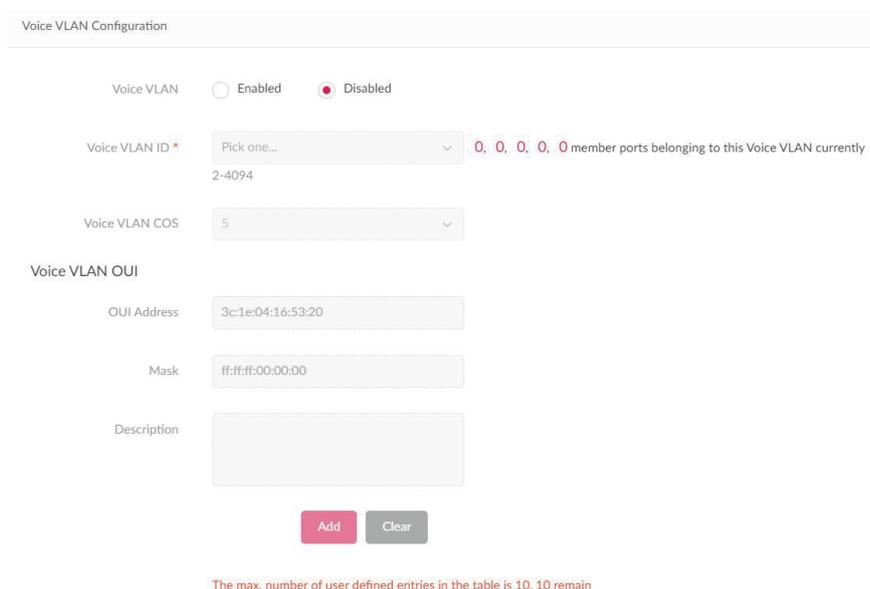

In the VLAN List section, a summary of VLAN is displayed. Enter keyword in the VLAN ID search field to locate a VLAN. Click to start the search. Under the Action field, click to edit a VLAN. Click to delete a VLAN. Click **Save** when complete.

**Voice VLAN Configuration**

In this section, users can view and configure global Voice VLAN settings and Voice VLAN OUI( Organizationally Unique Identifier). In the Voice VLAN field, select Enabled or Disabled. If Enabled, select Voice VLAN ID and Voice VLAN COS from the drop-down menu. On the right side of Voice VLAN ID field, users can view the number of member ports belonging to the voice VLAN. Click the numbers to be directed to the Port Setting page.

In the Voice VLAN OUI section, Voice VLAN is disabled. When enabled, users can add self-defined OUI for the voice VLAN. To do so, enter a description for ease of identification. Click **Add** to add a new Voice VLAN, or **Clear** to remove entered values. Up to 10 entries can be entered.

When Voice VLAN is enabled, a default Voice VLAN OUI list is displayed in the summary list below. These entries cannot be edited nor deleted.

The max. number of user defined entries in the table is 10, 10 remain

OUI Address	Mask	Description	Action
00:01:e3:00:00:00	ff:ff:ff:00:00:00	Siemens	
00:03:6b:00:00:00	ff:ff:ff:00:00:00	Cisco	
00:09:6e:00:00:00	ff:ff:ff:00:00:00	Avaya	
00:0f:e2:00:00:00	ff:ff:ff:00:00:00	Huawei & 3COM	
00:60:b9:00:00:00	ff:ff:ff:00:00:00	NEC & Philips	

### IGMP Snooping Configuration

IGMP snooping allows switches to be aware of multicasting groups and forward network traffic accordingly. In this section, users can enable or disable the IGMP Snooping function. When enabled, enter the VLAN ID of the VLAN. The max number of VLANs is 256.

IGMP Snooping Configuration

IGMP Snooping  Enabled  Disabled

VLAN

1-4094, e.g. 1-4,7,9 or All.

### STP Configuration

RSTP (Rapid Spanning Tree Protocol) can ensure a loop-free topology and speedy convergence time. In this section, users can enable or disable RSTP on all switches in the network.

STP Configuration

RSTP  Enabled  Disabled

### DHCP Server Screen Configuration

DHCP (Dynamic Host Configuration Protocol) server screening provides a higher security by filtering illegal DHCP server packets. Select **Enabled** to turn on DHCP Server Screening. When **Enabled** is selected, enter the **Allowed DHCP Server IP** in the field.

DHCP Server Screen Configuration

DHCP Server Screen  Enabled  Disabled

Allowed DHCP server IP

Only support 1 entry, e.g. 10.90.90.90

### Jumbo Frame Configuration

Jumbo frames are Ethernet frames with massive payload. They are used to reduce frame overload, increase system throughput and reduce CPU utilization. In the Jumbo Frame field, select **Enabled** or **Disabled**.

Jumbo Frame Configuration

Jumbo Frame  Enabled  Disabled

### Quality of Service

The QoS feature can prioritize certain types of data with the use of differentiated services model. The priorities are marked in each packet using Differentiated Services Code Point (DSCP) for traffic classification. To set the DSCP to CoS (Class of Service) queue, choose a value from the drop-down menu and set a name for it.

**Note:** One DSCP value can only be mapped to one CoS queue value.

Edit DSCP to CoS Queue Map

DSCP Value	Cos Queue Value	Name
0	1	Dlink
1	0	Default
2	0	Default
3	0	Default
4	0	Default

### LBD Configuration

The Loopback Detection (LBD) feature can detect loops occurring on one or across different ports. In the LBD field, click **Enabled** to turn on the feature. It is disabled by default.

LBD Configuration

LBD  Enabled  Disabled

### DDP Configuration

The D-Link Discovery Protocol (DDP) is a communication protocol defined by D-Link. When enabled, your device will become discoverable and can be managed by the DNC server. Features from DNA (D-Link Network Assistant) like IP settings, firmware upgrade, reboot and reset function will also be supported.

In the DDP field, click **Enabled** to turn on, or **Disabled** to turn off this feature. It is enabled by default.

DDP Configuration

DDP  Enabled  Disabled

### Local Credential Configuration

The username and password of your device is listed here.

Local Credential Configuration

Username

Password  

Nuclias Connect Configuration Profile Settings Switch

IPv4 ACL

The IPv4 ACL (Access Control List) feature for the switch can help improve network performance and security by blocking selected traffic. Navigate to **Configuration > Profile Settings > Site > Network > Switch > Your Device > IPv4 ACL** to configure the settings.

In the User defined IPv4 ACL Rules section, the following fields are presented:

Field	Description
<b>Sequence No.</b>	Set the sequence number. The range is 1-65535. Select <b>Auto</b> to auto-assign the sequence number
<b>Policy</b>	Select to permit or deny what traffic goes through the switch.
<b>Source</b>	Enter the source IP address. When the Protocol is set to <b>Any</b> , all traffic destination will be evaluated.
<b>Destination</b>	Enter the destination IP address. When the destination is set to <b>Any</b> , all traffic destination will be evaluated.
<b>Comment</b>	Enter a description for the rule.
<b>Protocol</b>	Select between <b>TCP, UDP, or Any.</b>
<b>Src Port</b>	Specify the number of the source port. The valid value is 0-65535. When the Src Port is set to <b>Any</b> , all traffic source will be evaluated.
<b>Dst Port</b>	Specify the number of the destination port. The valid value is 0-65535. When the Dst Port is set to <b>Any</b> , all traffic source will be evaluated.

Once complete, click **Add** to add the rule, or **Clear** to clear all values.

In the **IPv4 ACL Rule Table** section, a summary of all IPv4 ACL Rule is displayed. Under the Action field, click **Edit** to edit the ACL rule; Click **Delete** to delete the ACL rule. Click **Save** to save the changes.

# Access Policy

D-Link switches support 802.1X authentication, MAC authentication and port security to prevent unauthorized client from accessing the network. Navigate to **Configuration > Profile Setting > Site > Network > Switch > Your Device > Access Policy** to configure the settings.

In the **Policy Name** field, enter a name for the policy. In the **Remote RADIUS Server** section, specify up to 3 RADIUS Servers for the switches to forward access requests. Authentication requests will be processed by each of the RADIUS servers in the order that they are submitted. Click **Select** to select existing RADIUS servers created via the RADIUS Server page. A pop window will be presented to confirm your selection. Click **OK** to confirm, or **Cancel** to close the window.

Once the RADIUS Servers is selected, a summary of the RADIUS servers will be listed in the table. In the **Action** field, click  to move the entry up, click  to move the entry down. Click  to delete the entry.

Policy Name \*

Remote RADIUS \*

The max. number of entries in the table is 3, 2 remain

No.	RADIUS Server	RADIUS Port	RADIUS Secret	Action
1	10.90.90.1	1812	.....	  

In the **Access Policy Type** field, select 802.1x Port Based. This will allow only one user to be authenticated per port by a remote RADIUS server.

In the Guest VLAN field, specify a guest VLAN ID or disable it from the drop-down menu. The VLAN ID range is 1 to 4094. One switch only supports one Guest VLAN. When a VLAN ID is selected, the member port information will be presented. Click the number to be directed to the Port Settings page

In the Switch Ports field, the number of switch ports that's applying to the policy is listed. Click the numbers to be directed to the Port Settings page.

Access Policy Type

Guest VLAN   
 10, 20, 26, 28, 52 member ports belonging to this Guest VLAN currently

Switch Ports 0, 0, 0, 0, 0 ports using this policy currently

Access Policy saved successfully

Nuclias Connect Configuration Profile Settings Switch

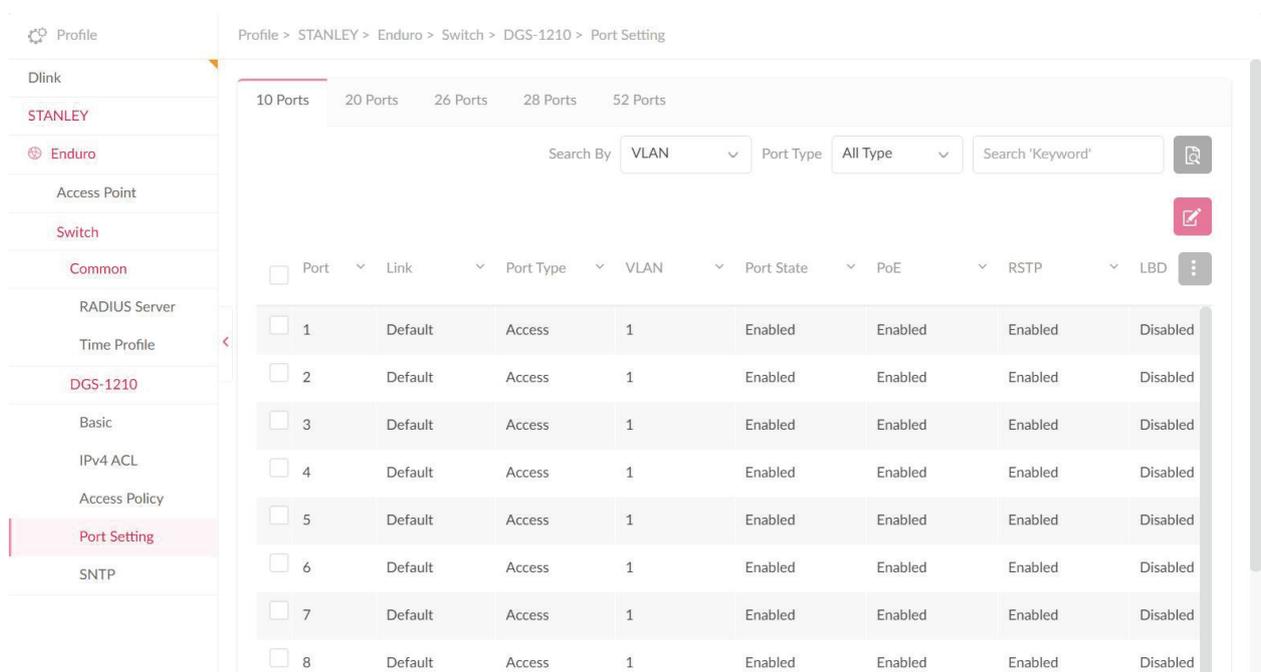

**Port Setting**

Navigate to **Configuration > Profile Settings > Network > Switch > Your Switch > Port Setting**, a summary of each of the switch port groups is displayed. Note that the number of port groups depends on the switch series.

To filter the search, from the **Search By** drop down menu, select **VLAN/Port/Access Policy**, and select Port Type **Access/Trunk/All**. Under the Search column, enter a relevant keyword to narrow the search. Click  to start the search. The summary includes information such as **Port number, Link, Port type, VLAN, Allowed VLAN, Port State, PoE, RSTP, LBD, DDP, Port Shutdown Schedule, PoE Supply Schedule, and Access Policies**.

Note that under the Link field, the value is **Default** (System default value) and cannot be modified in Profile Configuration. Links can only be modified in Standalone mode via **Monitor > Switch > Switch Port**, or **Monitor > Device Detail page > Ports**.

To make changes to a port or port group, select the port(s) and click  to make the desired changes. Scroll down to view the Port Setting table. Once complete, click **Save** to save the changes.

Nuclias Connect Configuration Profile Settings Switch

**SNTP**

The SNTP (Simple Network Time Protocol) function allows the switch to synchronize clocks on a network. Navigate to **Configuration > Profile Settings > Site > Network > Switch > Your Switch > SNTP** to configuration the settings.

Under the SNTP tab, you can configure **Automatic Time Configuration** and **Time Zone Settings**.

In the Automatic Time Configuration section, click **Enable SNTP Server** to enable or disable it. Once enabled, specify the IPv4 address or domain name of the primary SNTP server from which the system time is retrieved in the **SNTP Server 1** field, and the secondary SNTP server in the **SNTP Server 2** field.

Automatic Time Configuration

Enable SNTP Server

SNTP Server1

SNTP Server2

In the Time Zone Settings section, users can configure time zones and daylight saving for SNTP. From the **Time Zone** field, select your local time zone. Click **Enable Daylight Saving** to enable or disable daylight saving.

In the **DST Start (24HR)** field, enter the month, date, and time in which DST will start at. In the **DST End (24HR)** field, enter the month, date, and time in which DST will end at. In the **DST Offset** field, specify the amount of time that will constitute the local DST offset - 30, 60, 90, or 120 minutes. The default is 60 min. Click **Save** when complete.

Nuclias Configuration **Firmware Upgrade**

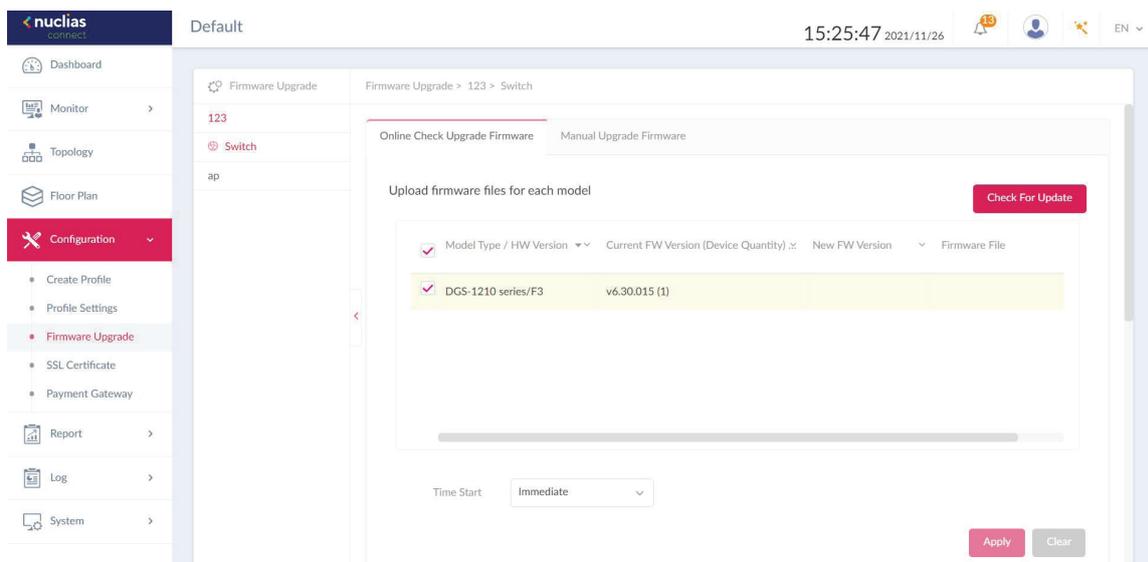

The Firmware Upgrade function allows users to perform a firmware upgrade. For online update, please confirm your device is online. For manual upgrade, please visit D-Link website of your region to see if newer firmware available.

Navigate to **Configuration > Firmware Upgrade > [Site] > [Network]**.

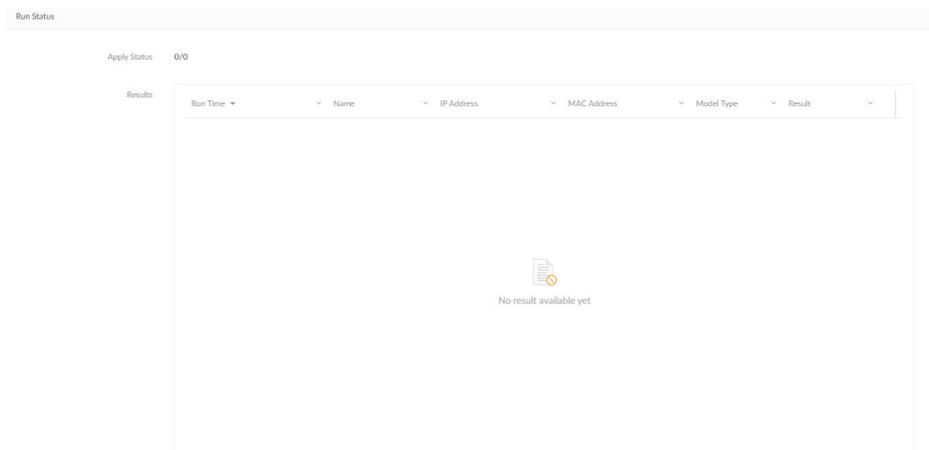

Block	Description
<b>Online Check Upgrade Firmware</b>	Click to configure online upgrade.
<b>Check For Update</b>	Click to check if newer firmware is available on online server.
<b>Manual Upgrade Firmware</b>	Click to configure manual upgrade.
<b>Change</b>	Click to select a firmware file to upload. Files are model specific.
<b>Time Start</b>	Click the drop-down menu to select a specific time or update immediately.

Click **Apply** to save the above configuration settings.

Click **Clear** to delete the defined settings.

The firmware upgrade status and result can be seen at the **Run Status** section. The results can be sorted by **Run Time, Name, IP Address, MAC Address, Model Type and Result**.

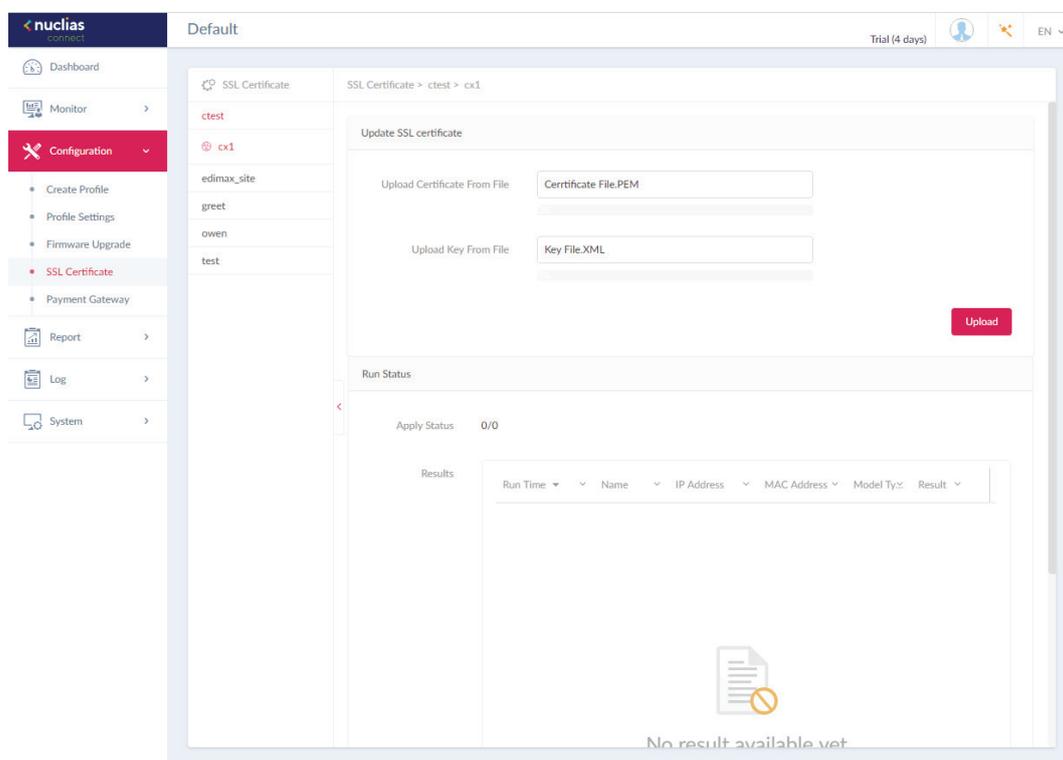

The SSL Certificate function provides the means to install an SSL certificate for use on the network. To accomplish this task an intermediate certificate is required. The intermediate certificate is used to establish the trust of the SSL certificate by binding it to the Certificate Authority's root certificate. To complete the certificate trust configuration, the SSL Certificate function requires the certificate file to be uploaded. Please reboot your APs after you uploaded certificate.

In the **Update SSL certificate** section, the following parameters can be configured:

Options	Description
<b>Upload Certificate From File</b>	Click <b>Browser...</b> to select the SSL certificate file located on the drive that will be uploaded.
<b>Upload Key From File</b>	Click <b>Browser...</b> to select the SSL key file located on the local drive that will be uploaded.

Click **Upload** to initiate the file upload. The upload status and result will appear in the below area.

The payment gateway is a function that allows e-commerce services within the network. The Payment Gateway page will show payment settings and options necessary to enable payment services.

Navigate to **Configuration > Payment Gateway**.

Parameter	Description
<b>PayPal Currency</b>	Click the drop-down menu to select the currency code for the Paypal account.
<b>PayPal Client ID</b>	Enter the username for the Paypal account.
<b>PayPal Secret</b>	Enter the password for the Paypal account.
<b>Options</b>	Enter the duration time in minutes, hours, or days as well as the associated cost for the entry. Click <b>+</b> to enter the option.

Click **Save** to save the values and update the screen.

The screenshot shows the Nuclias Connect Configuration interface. The top navigation bar includes the Nuclias logo, the device ID 'DNH-100-791A', the time '11:23:31', the date '2022-10-06', and user profile icons. The left sidebar lists various system functions, with 'Configuration' selected and expanded to show 'Payment Gateway'. The main content area displays the 'Payment Settings' form with the following fields:

- PayPal Currency\***: A dropdown menu currently set to 'USD'.
- PayPal Client ID\***: An empty text input field.
- PayPal Secret\***: An empty text input field.
- Options\***: A section containing two rows of settings:
  - Row 1: **Duration** (input: 0), **Minute(s)** (dropdown), and **Cost** (input: 0). A red minus button is to the left.
  - Row 2: **Duration** (empty input), **Select one...** (dropdown), and **Cost** (empty input). A red plus button is to the left.

A red **Save** button is located at the bottom right of the form area.

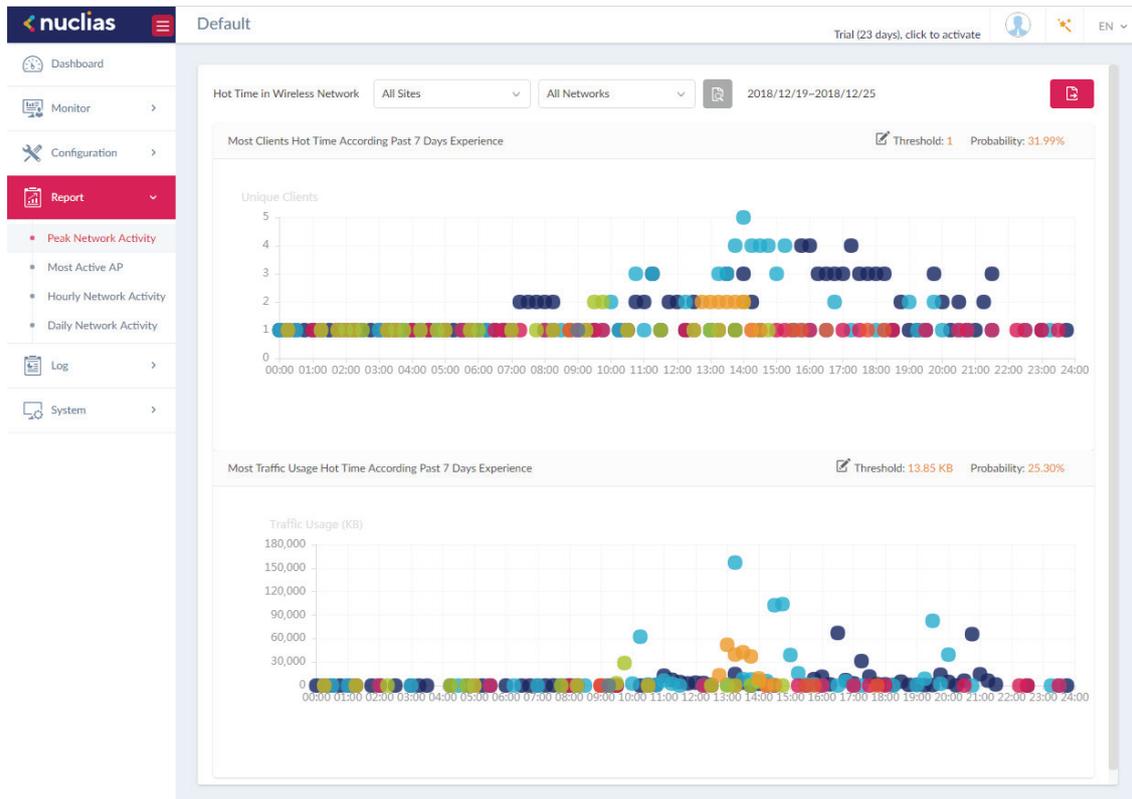

# Nuclias Report Access Point Peak Network Activity

The Peak Network Activity function allows administrators to monitor wireless traffic on the network. Wireless activity for all or specific sites and networks can be displayed according to unique clients and traffic usage.

Navigate to **Report > Access Point > Peak Network Activity** to view the information.

To view a network activity report, select the site and network from the corresponding drop-down menu and click  to view the report.

Once a report has been generated click  to save the report to a local PDF file.

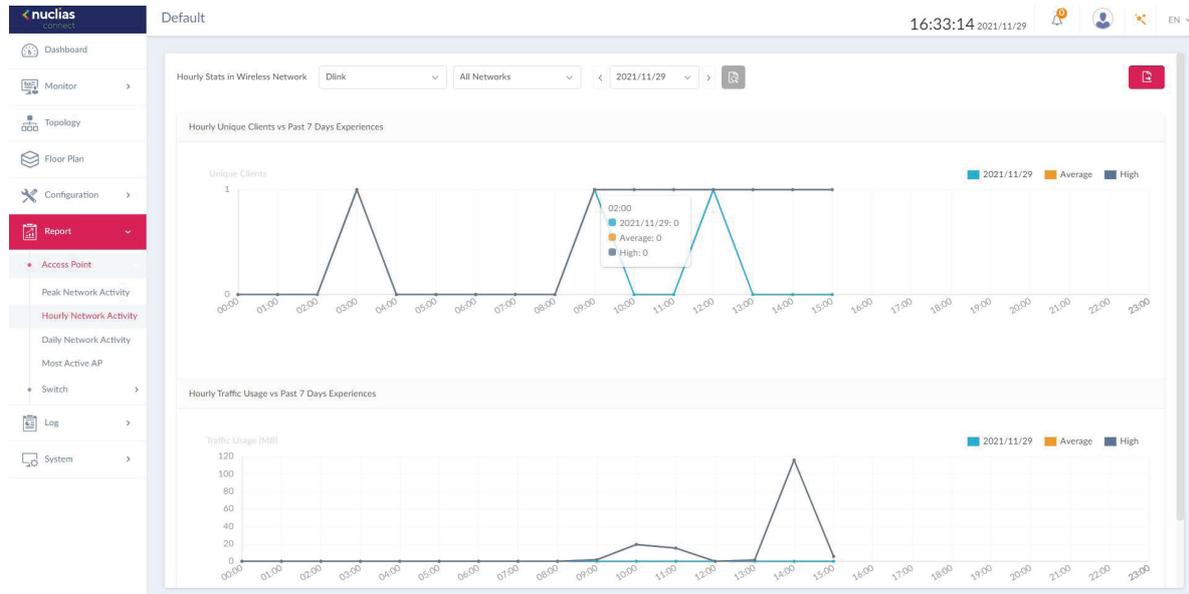

# Nuclias Report Access Point Hourly Network Activity

The Hourly Network Activity function allows administrators to monitor wireless traffic on the network. Wireless activity for all or specific sites and networks is displayed according to unique clients and traffic usage as reported by the hour.

Navigate to **Report > Hourly Network Activity** to view the report.

To start a daily report, select the site and network from the corresponding drop-down menu and click  to view the report.

Once a report is generated, click  to save the report to a local PDF file.

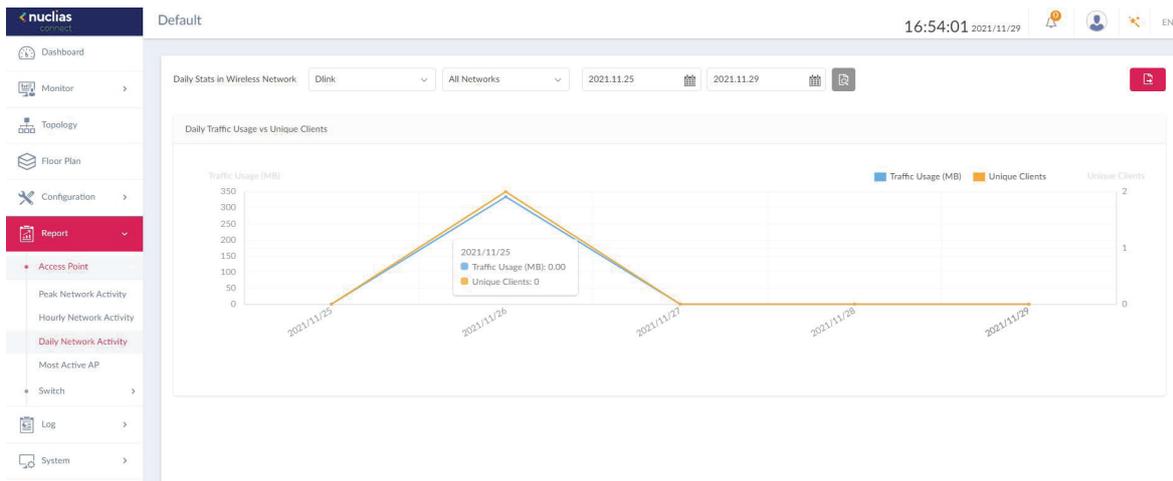

Nuclias Report Access Point **Daily Network Activity**

The Daily Network Activity function allows administrators to monitor daily wireless traffic on the network. Wireless activity for unique clients and traffic usage is displayed according to unique clients and traffic usage as reported by the day.

Navigate to **Report > Daily Network Activity** to generate and view the report.

To display a specific client's traffic usage, select a site, network, and define the starting and ending dates of the search. Once the search parameters are defined, click  to view the report.

Once a report is generated, click  to save the report to a local PDF file.

## Nuclias

## Report

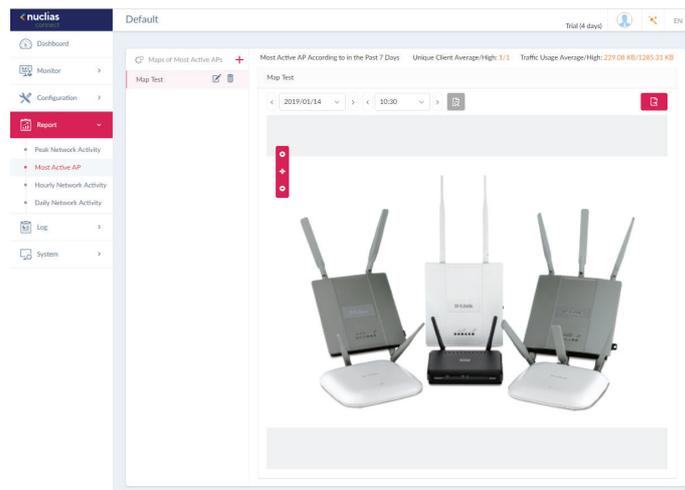

## Access Point

## Most Active AP

To view a specific client's traffic usage, select a client from the most active APs column. Available maps can be edited or deleted by clicking  or . In the Edit Map of Most Active APs page, enter the name of the map name and click the Select AP drop-down menu to select an AP from a list of available APs. Once defined, click **Save** to complete the process.

To add a new map, click  to open the Create Map of Most Active APs. Enter the map name in the name field. Customize the map by dragging and dropping an image (supported file formats: \*.png,\*.jpg; max. size: 10M) or browsing a local folder to select the image.

To view a network AP active map report, select the date and time then click  to view the report. Once a report has been generated, click  to save the report to a local PDF file.

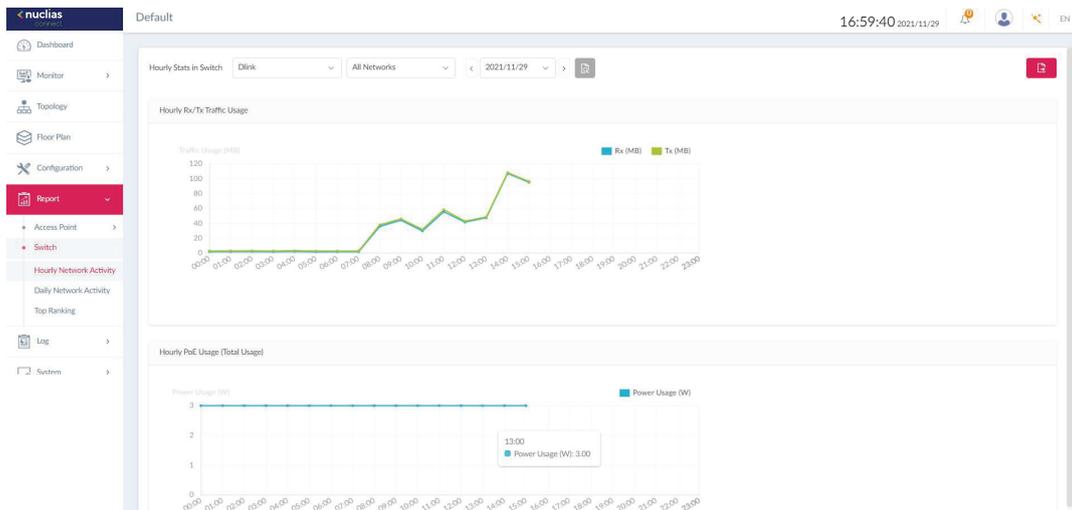

# Nuclias Connect Report Switch Hourly Network Activity

The Hourly Network Activity function allows administrators to monitor daily traffic and power usage on the network. Traffic usage and PoE Usage is reported by the hour. Navigate to **Report > Switch > Hourly Network Activity** to generate and view the report.

To display clients' traffic usage and PoE usage, select a site, network, and define the starting and ending dates of the search. Once the search parameters are defined, click  to view the report.

Once a report is generated, click  to save the report to a local PDF file.

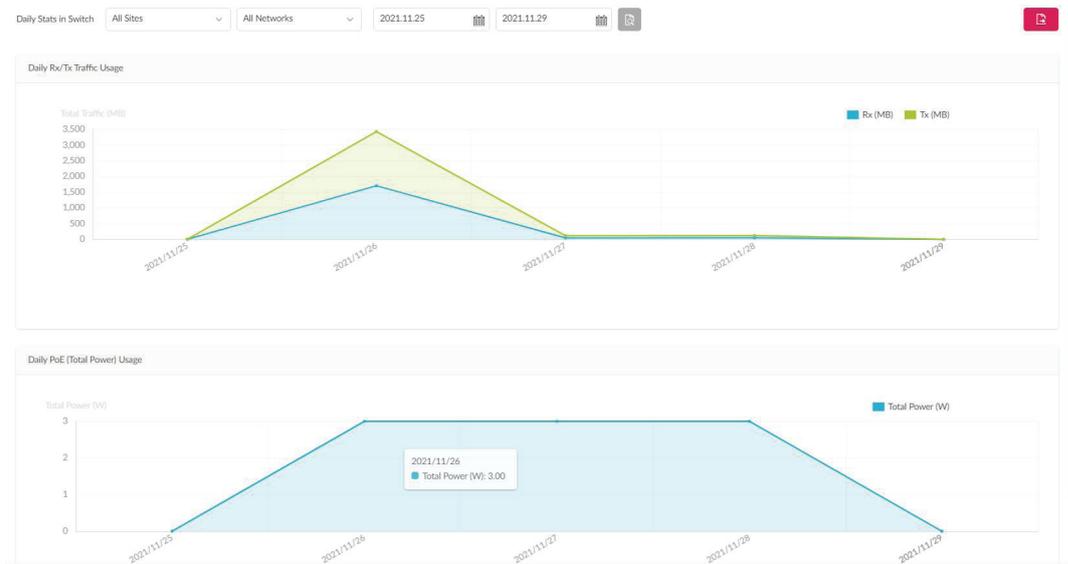

# Nuclias Connect Report Switch Daily Network Activity

The Daily Network Activity function allows administrators to monitor daily traffic and power usage on the network. Navigate to **Report > Switch > Daily Network Activity** to generate and view the report.

To display clients' traffic usage and PoE usage, select a site, network, and define the starting and ending dates of the search. Once the search parameters are defined, click  to view the report.

Once a report is generated, click  to save the report to a local PDF file.

# Nuclias Connect Report Switch Top Ranking

The Top Ranking report allows administrators to view a range of switch traffic reports sorted by top 10 rankings on the site and network.

The following ranking reports are available: **Top Total Traffic (Tx)**, **Top Total Traffic (Rx)**, **Top Port Traffic (Tx)**, **Top Port Traffic (Rx)**, **Top Port Errors (Tx)**, **Top Port Discards (Rx)**, **Top Port Multicast (Rx)**, **Top Port Broadcast (Rx)**, **Top Port Utilization**, **Top PoE Power Consumption**, and **Top CPU Utilization**.

Navigate to **Report > Top Ranking** to view the report.

To filter the top ranking report, select the site and network from the corresponding drop-down menu and click  to view the report.

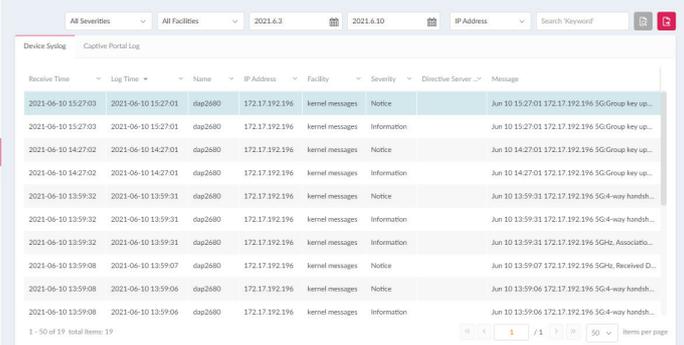

Once a report is generated, click  to save the report to a local PDF file.

The Syslog function allows administrators to view alert messages for events concerning system logs. Log messages for the system and captive portals can be viewed here. Navigate to **Log > Device Syslog** to view the relevant information.

To start a syslog report, select the event severity, facility system, and define the period of time to report. Click the drop-down menu to define the type of search criteria to view, IP Address or Trap Details. Fill in the keyword field and click  to view the generated report.

Once a report has been generated, click  to save the report to a local PDF file.

1 - 50 of 19 total items: 19

The System Event Log function allows administrators to view alerts that may require attention and necessary action to continue smooth operation and to prevent failures. Navigate to **Log > System Event Log** to view the relevant information.

To generate a System Event Log report, select the event severity and define the period of time to report. Click the drop-down menu to choose either IP address or Message as report criteria. Fill in the keyword field and click  to view the generated report.

Once a report has been generated, click  to save the report to a local PDF file.

The screenshot displays the System Event Log interface. At the top, there are filters for 'All Event Types', dates '2021.05.01' and '2021.6.10', and a dropdown for 'IP Address'. A search bar labeled 'Search Keyword' is also present. Below the filters is a table with columns: Log Time, Network, IP Address, MAC Address, Event Type, and Message. Two log entries are visible:

Log Time	Network	IP Address	MAC Address	Event Type	Message
2021-05-17 22:27:37		172.17.192.224	60:63:4c:2e:93:c0	Initialization	The system time is ready.
2021-05-17 22:27:35		172.17.192.224	60:63:4c:2e:93:c0	Initialization	The MicroSD card is ready.

At the bottom left, it shows '1 - 50 of 2 total items: 2'. At the bottom right, there is a pagination control showing '1 / 1' and a dropdown for 'Items per page'.

Nuclias

Log

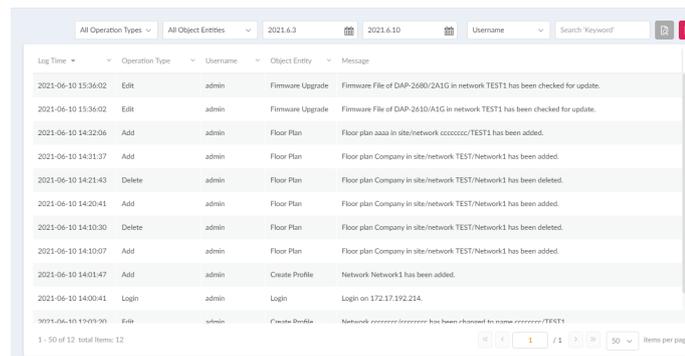

Device Log

The Device Log function allows administrators to view alert messages from an AP's embedded memory. The system and network messages includes a time stamp and message type. The log information includes but is not limited to the following items: synchronize device settings, upgrading firmware, upload configuration, and blocking clients.

Navigate to **Log > Device Log** to display the function information.

To start a Device Log, select the operation type and define the period of time to report. Click the drop-down menu to choose either IP address or Log Details as report criteria. Fill in the keyword field and click  to view the generated report.

Once a report has been generated, click  to save the report to a local PDF file.

To generate an Audit Log report, select the entries by **Operation Type** (Operations that performed on the object entities) and **Object Entity** (i.e. Objects associated with the functional tabs in the left pane), define the time period, and select Username or Message as the filtering criteria. Then enter a keyword and click  to display the search results.

Once a report has been generated, click  to export it as a local Excel file. The file will be saved in your browser's download directory and will be named as follows:

Nuclias\_Connect\_log type\_YYYY\_MMDD\_HHMMSS.

Nuclias

Log

Alerts

This type of log records events activities for alert, e.g. new firmware release, port linked or blocked, and device online or offline.

Log Time	Network	Name	IP Address	MAC Address	Alert Event	Message	Action
2021-05-17 22:27:59	ccccc	dap2680	172.17.192.196	18:0f:76:32:ea:20	Device online	Device is connected.	

To generate an Alert report, select the alert events, define the time period, and select IP Address or Message as the filtering criteria. Then enter a keyword and click to display the search results. Once a report has been generated, click to export it as a local Excel file. The file will be saved in your browser's download directory and will be named as follows: Nuclias\_Connect\_log type\_YYYY\_MMDD\_HHMMSS.

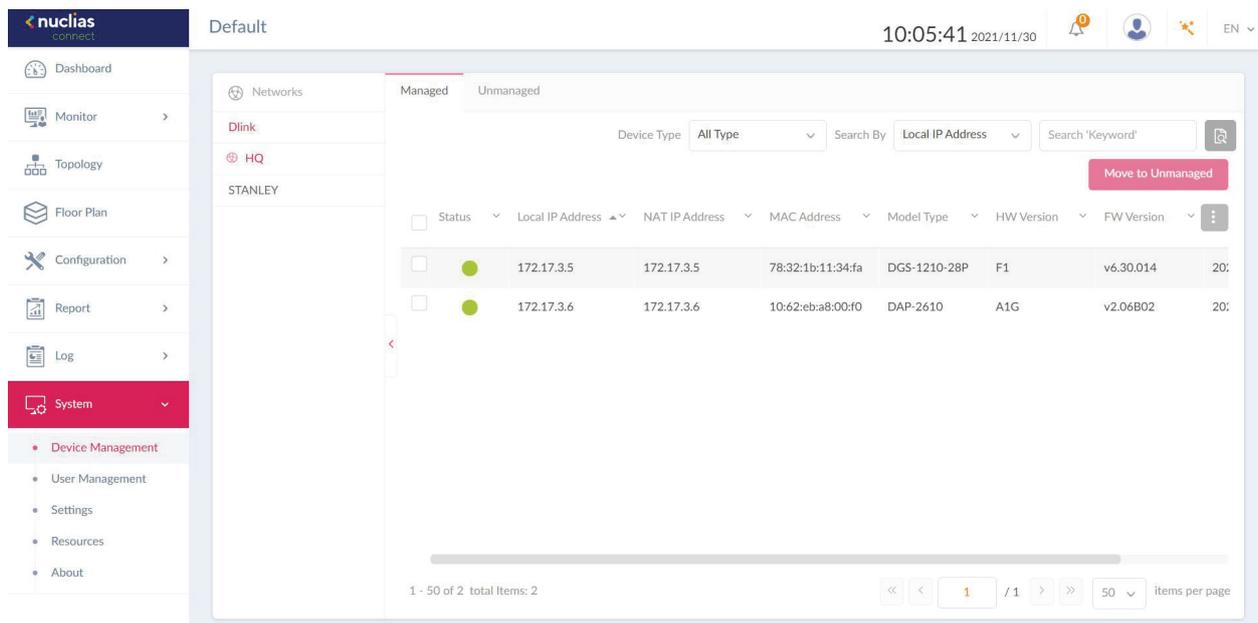

Nuclias System **Device Management**

The Device Management function allows user to view list of all devices on the network both managed and unmanaged devices. Navigate to **Log > Device** Log to view the relevant information.

First select the site and network, then click on the respective tab to view either managed or unmanaged devices.

The **Move to...** button on the upper right corner of each tab allows you to move devices between Managed and Unmanaged. When a device is moved to Unmanaged, you'll have to option to remove the device from the network by clicking the Delete button.

The list of devices can be sorted by the following criteria: Status, Local IP Address, NAT IP address, MAC Address, Model Type, HW Version, FW Version, Managed Time, Backup FW Version. The Menu button contains more fields to which you can add to the list to view.

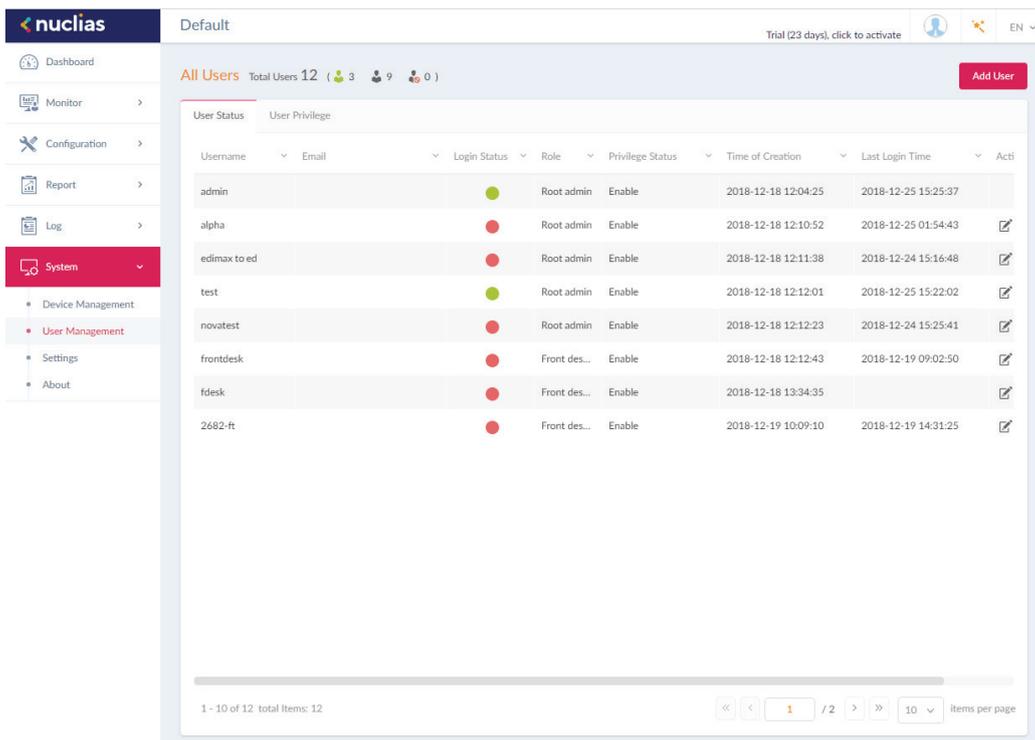

The User Status function allows administrators to view the current status of all registered user profiles, edit or delete the profile. When the Login Status shows green ●, the user is logged in. When the Login Status shows red ●, the user is logged out. Navigate to **System > User Management** to view the relevant information.

To edit a user profile, click the edit button  corresponding to the user. The username, password, email, privilege, privilege status, location, contact number as well as the user description are available for edit. Note that the administrator account cannot be deleted or have its username and privilege settings modified.

Once the user settings are completed, click **Save** to confirm or **Cancel** to return to the previous menu.

The following is a list of available user profiles and a description of their function.

Options	Description
<b>Admin</b>	This is the operator account and cannot be deleted.
<b>Root admin</b>	Manage all sites/networks on this server.
<b>Local admin</b>	Manage your own network.
<b>Root user</b>	View all sites/networks on this server.
<b>Local user</b>	View your own network.
<b>Front desk user</b>	Able to generate and manage passcodes.

The screenshot displays the Nuclias User Management interface. The top navigation bar includes the Nuclias logo, the word "Default", a trial notice "Trial (23 days), click to activate", a user profile icon, a search icon, and a language dropdown set to "EN". The left sidebar contains a menu with items: Dashboard, Monitor, Configuration, Report, Log, System (expanded), Device Management, User Management (selected), Settings, and About. The main content area shows "All Users" with a total of 12 users (3 logged in, 9 logged out, 0 unknown). A table lists the users with the following columns: Username, Email, Login Status, Role, Privilege Status, Time of Creation, Last Login Time, and Action. The users listed are: admin (logged in), alpha (logged out), edimax to ed (logged out), test (logged in), novatest (logged out), frontdesk (logged out), fdesk (logged out), and 2682-ft (logged out). Each user row has an edit icon in the Action column. At the bottom, a pagination bar shows "1 - 10 of 12 total items: 12" and a dropdown for "10 items per page".

The User Privilege function allows administrators to add, view, and authorize/unauthorize users on a selected network. Navigate to **System > User Management** and click on the **User Permission** tab to display the relevant information.

To add a user to the selected network, click **Add User** to open the Create User page. In this page, enter the new user information. Fields marked with an asterisk (\*) are required to complete the new entry. Once the information is filled in, click **Create** to save the new user profile. Alternatively, click **Cancel** to return to the previous screen without saving.

To authorize or unauthorize an existing user, click an available site and then the target network. The available users for the network are displayed on the ensuing screen. From the Unauthorized Users column, click the radio box of the target user. Once a user is selected, click **>>** to move to the respective column to authorize an user. The same process is used to unauthorize an user.

The screenshot shows the Nuclias Connect web interface. The top navigation bar includes the Nuclias logo, the device ID 'DNH-100-791A', the time '12:21:58', the date '2019-01-13', and user profile information. The left sidebar contains a menu with 'System' selected, showing sub-items: Device Management, User Management, Settings, Resources, and About. The main content area is titled 'All Users' and shows 'Total Users 1 (1 authorized, 0 unauthorized, 0 disabled)'. Below this, there are tabs for 'User Status' and 'User Permission'. The 'User Permission' tab is active, displaying a table with columns for 'Unauthorized Users' and 'Authorised Users'. The 'Unauthorized Users' column contains a user named 'Tester1'. The 'Authorised Users' column contains a user named 'admin (System admin)'. Between the columns are navigation arrows: a right arrow (>>) and a left arrow (<<). A red 'Add User' button is in the top right, and a red 'Save' button is in the bottom right.

Nuclias

System

Settings

General

The **Settings** page displays General, Connection, SMTP, Backup & Restore, Firmware Update, System Operation, Single-Sign-On (SSO) information, Alerts, and FOTA.

The **General** tab displays customizable system settings, which includes adding a logo and enabling the captcha feature. Device time and date and live packet interval settings are also available.

In the **Customized Setting** section, the following parameters can be configured:

Parameter	Description
<b>Device Name</b>	Enter a description to set the device name.
<b>Logo</b>	Click <b>Browser</b> to select a file to be used as the interface logo. A local file can be selected by using the browse function or by dragging and dropping a file into the frame. Supported file types include PNG or JPG images.
<b>Login Captcha</b>	Click the drop-down menu to enable or disable the login Captcha function.

In the **LAN Settings** section, the device connection parameters can be configured. These settings allow the management computer to connect to the device.

Parameter	Description
<b>Get Address From</b>	Click the drop-down menu to choose whether the DNH-100 will get an IP address from a DHCP server or to manually set a static IP address. By default it is set to Static IP Address. <b>Note:</b> DHCP server is not recommended.
<b>IP Address</b>	If the above is set to Static IP address, specify an IP address for the DNH-100.
<b>Subnet Mask</b>	Specify a subnet mask for the device.
<b>Gateway</b>	Specify a gateway mask for the device. (Optional)
<b>Primary DNS</b>	Specify a primary DNS for the device. (Optional)
<b>Secondary DNS</b>	Specify a secondary DNS for the device. (Optional)

In the **Date and Time** section, the time and date of the device can be configured. It is recommended that an NTP server is used; log and schedule settings are dependent on correct time and date configurations.

Parameter	Description
<b>Time Zone</b>	Click the drop-down menu to select the time zone.
<b>NTP</b>	Check to enable use of NTP server(s) to manage device's date and time.
<b>NTP Server 1</b>	Specify the NTP Server's address.
<b>NTP Server 2</b>	Specify the secondary NTP Server's address.

Parameter	Description
<b>Copy Your Computer's Time</b>	Click to copy your management computer's time to use here or manually set the time in the text boxes to the left of this button.

Click **Save** to save the values and update the screen.

In the **Console Setting** section, parameters about console connection to the DNH-100 can be configured:

Parameter	Description
<b>Console</b>	Check to enable management through the console port.
<b>Console Protocol</b>	Choose whether to use Telnet or SSH
<b>Timeout</b>	Click the drop-down menu to select timeout time (in min).

In the **Device Setting** section, the following parameters can be configured:

Parameter	Description
<b>Live Packet Interval</b>	Click the drop-down menu to select the live packet interval time.

Click **Save** to save the values and update the screen.

The screenshot displays the configuration page for a dnh-100 device. The left sidebar shows the navigation menu with 'System' selected. The main content area is divided into several sections:

- Customized Setting:** Includes fields for 'Device Name' (dnh-100), a 'Log' button, and a 'Login Capabilities' dropdown set to 'Enabled'.
- LAN Settings:** Includes 'Get IP Address From' (Static IP Address (manual)), 'IP Address\*' (192.168.0.200), 'Subnet Mask\*' (255.255.255.0), 'Gateway', 'Primary DNS', and 'Secondary DNS'. A 'Synchronize Device Access Address' checkbox is checked.
- Date And Time:** Includes 'Time Zone' (GMT Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London), 'NTP' checked, 'NTP Server 1' (ntp.lan.com), and 'NTP Server 2' (IP address/Domain name). There are also time selection fields for '2024.1.15' and '09:28 AM'.
- Console Setting:** Includes 'Console' checked, 'Console Protocol' (Telnet, SSH), and 'Timeout' (5 Min).
- Device Setting:** Includes 'Live Packet Interval' (1 Min).

Nuclias

System

Settings

Connection

The **Connection** tab displays device access address, port, and SSL certificate settings.

Navigate to **System > Settings** and click the **Connection** tab to display the relevant information.

In the **Connection Setting** section, the following parameters can be configured:

Parameter	Description
<b>Device Access Address</b>	Enter the Nuclias Connect Server application's IP address. To manage remote APs, the IP address must be a public IP address; IP mapping is required for instances behind a firewall or router.
<b>Device Access Port</b>	Enter the Nuclias Connect server application's listen port number. The default value is 8443. For remote AP management behind a firewall or router, the inbound port must be opened.
<b>Web Access Port</b>	The web access ports as defined during the installation. The values are predefined.

Click **Save** to save the values and update the screen.

In the **Update SSL Certificate** section, the following parameters can be configured:

Parameter	Description
<b>Upload Certificate From File</b>	Click <b>Browser...</b> to select the SSL certificate file located on the local drive that will be uploaded.
<b>Upload Key From File</b>	Click <b>Browser...</b> to select the SSL key file located on the local drive, that will be uploaded.

Click **Save** to save the values and update the screen.

The screenshot displays the Nuclias Connect web interface for device DNH-100-791A. The top navigation bar shows the device name and the current time (11:25:46) and date (2022-10-06). The left sidebar contains various system management options, with 'System' and 'Settings' highlighted. The main content area is divided into several tabs: General, Connection, SMTP, Backup & Restore, Firmware Update, System Operation, REST API, Single Sign-On (S...), Alerts, and FOTA. The 'Connection' tab is active, showing the 'Connection Settings' section. This section includes three input fields: 'Device Access Address' (set to DNH-100-791a.local), 'Device Access Port' (set to 8443), and 'Web Access Port' (set to 443). A red 'Save' button is located below these fields. Below the Connection Settings is the 'Update SSL Certificate' section, which features an 'Upload Certificate' field with a 'Browser...' button.

Nuclias

System

Settings

SMTP

The SMTP tab displays customizable settings for the simple mail transfer protocol (SMTP). This is necessary in order to send emails on behalf of the system such as reset password validation emails.

Navigate to **System > Settings** and click on the **SMTP** tab.

Parameter	Description
<b>SMTP Server</b>	Enter the SMTP server's IP address or domain name.
<b>Port</b>	Enter the SMTP server's port number.
<b>Sender E-Mail Address</b>	Enter the sender's email address.
<b>Sender</b>	Enter the sender's name.
<b>Security Type</b>	Click the drop-down menu to select the security type to be used in the e-mail system. The options include None or SSL.
<b>Encoding Type</b>	Click the drop-down menu to select the encoding type to match the supported e-mail client. The options include UTF-8 or ASC-II.
<b>Authentication</b>	Click the drop-down menu to select the authentication mechanism during logging supported by the e-mail server. The options include Anonymous or SMTP Authentication.
<b>Test E-Mail</b>	Enter the recipient e-mail address to initiate a test e-mail through the SMTP configuration. Click <b>Test</b> to start the test function.

Click **Save** to save the values and update the screen.

The screenshot displays the Nuclias Connect configuration interface for the SMTP settings. The page title is "DNH-100-791A" and the time is "11:27:05 2022-10-06". The left sidebar shows the navigation menu with "System" selected. The main content area shows the "SMTP" tab with various settings:

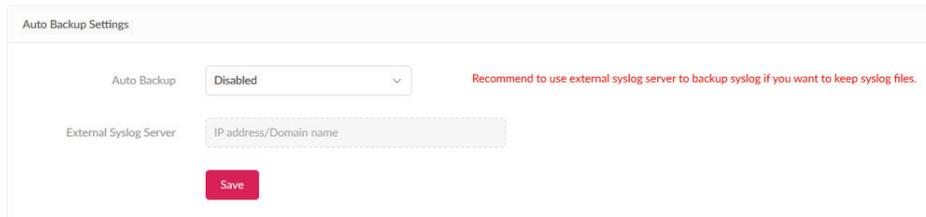

- SMTP Server\*: Server
- Port\*: 25
- Sender E-Mail Address\*: Sender E-Mail Address
- Sender\*: Sender
- Security Type: None
- Encoding Type: UTF-8
- Authentication: Anonymous
- Test E-Mail: Test E-Mail

A "Test" button is visible next to the Test E-Mail field.

The Backup & Restore tab displays customizable settings for backing up configuration settings or logs.

Navigate to **System > Settings** and click on the **Backup & Restore** tab to configure the settings.

In the **Auto Log Backup Settings** section, parameters regarding auto backup can be configured:

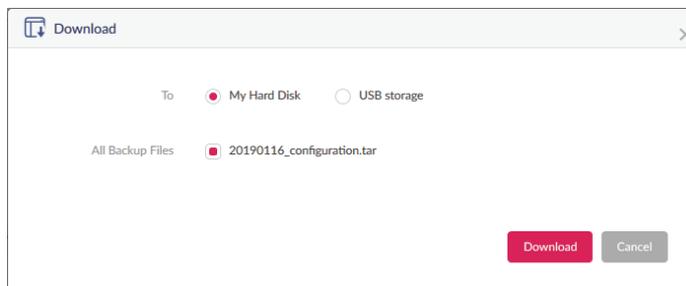

Parameter	Description
<b>Auto Backup</b>	Click on drop-down list to enable or disable auto backup.
<b>External Syslog Server</b>	Enter the external syslog's IP address or domain name.

In the **Backup Settings** section, device configuration and logs can be backed up, and downloaded to a local hard drive or USB, or deleted:

Click  to backup the configuration file or log files.

Click  to download the backup file to either the management computer's hard drive or a USB drive.

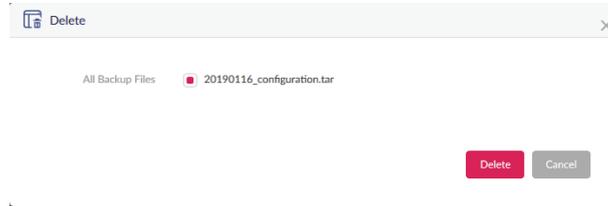

Specify the following parameters from the pop-up window, then click **Download** to download the file or **Cancel** to exit from the operation.

Parameter	Description
<b>To</b>	Choose either My Computer or USB Disk to download your backup file to.
<b>All Backup Files</b>	A list of all backup files that are available to be downloaded will be displayed. Select the radio button of the file you want to download.

Click  to delete the backup configuration files or log files that are stored on the device.

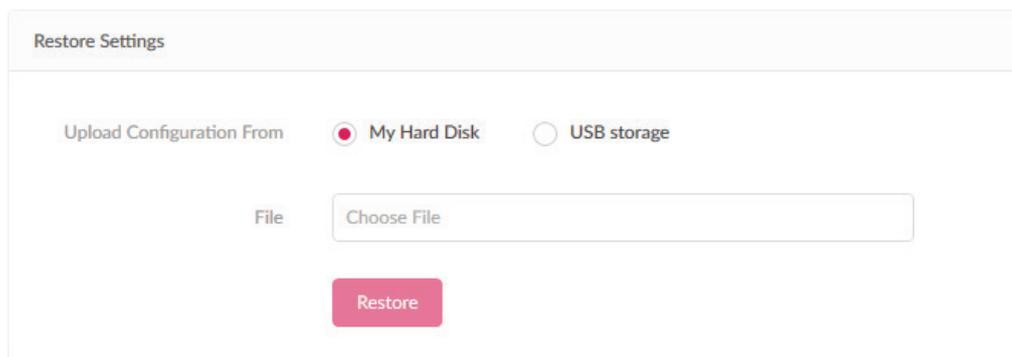

Select which files from the pop-up window you want to delete, then click **Delete** to confirm your action or **Cancel** to exit from the operation.

In the **Restore Settings** section, device configuration can be restored from local hard drive or USB storage.

Specify the following parameters, then click **Restore**.

Parameter	Description
<b>Restore Configuration From</b>	Choose either My Computer or USB Disk to upload your configuration file.
<b>File</b>	Click <b>Choose File</b> to select your configuration file's location.

The **Firmware Update** tab displays customizable settings for upgrading the firmware of the DNH-100.

Specify the following parameters to update the firmware.

Parameter	Description
<b>Upload Firmware From</b>	Choose either My Computer, USB Storage or FTP Server to upload your firmware file.
<b>File</b>	Click <b>Browse</b> to select your configuration file. (Only available when My Computer or USB Storage is chosen.)

When **FTP Server** is selected as the destination of the firmware file, the following parameters can be configured:

Parameter	Description
<b>FTP Server</b>	Specify IP address or domain name of FTP server.
<b>Port</b>	Specify port number of FTP server.
<b>Username</b>	Specify username.
<b>Password</b>	Specify password.
<b>Firmware File</b>	Specify the path and filename on the FTP server where the firmware file is located.

The screenshot displays the Nuclias Connect web interface for device DNH-100-791A. The top navigation bar shows the time as 11:30:05 on 2022-10-06. The left sidebar menu includes options like Dashboard, Monitor, Topology, Floor Plan, Configuration, Report, Log, System, Device Management, User Management, Settings, Resources, and About. The 'System' menu is expanded, and the 'Firmware Update' tab is selected. The main content area shows the following configuration fields:

- Upload Firmware From:** A dropdown menu set to 'FTP Server'.
- FTP Server\*:** A text input field.
- Port\*:** A text input field containing the value '21'.
- Username\*:** A text input field.
- Password\*:** A text input field with a password icon.
- Firmware File\*:** A text input field with the placeholder text 'Path and file name'.

An 'Apply' button is located at the bottom of the configuration area.

The **System Operation** tab allows you to reboot, restore to factory default settings, or format the MicroSD card in the DNH-100.

Click **Shutdown** to shutdown the device.

Click **Reboot** to reboot DNH-100 immediately.

Click **Restore** to restore DNH-100 to factory default settings.

If **Except IP address** is checked, then the device IP address will remain the same.

Click **Format** to format the MicroSD card. Please be aware that you will lose all information on the MicroSD card once you proceed.

The screenshot shows the Nuclias Connect web interface for device DNH-100-791A. The top navigation bar includes the Nuclias Connect logo, the device ID, the time 12:28:56 on 2019-01-14, and user profile icons. The left sidebar contains a menu with options: Dashboard, Monitor, Topology, Floor Plan, Configuration, Report, Log, System (selected), Device Management, User Management, Settings (highlighted), Resources, and About. The main content area is titled 'System Operation' and contains four rows of controls:

Action	Control	Additional Options
Shutdown Device	<b>Shutdown</b>	
Reboot Device	<b>Reboot</b>	
Factory Default Setting	<b>Restore</b>	<input type="checkbox"/> Except IP Address and Web Access Port
Format MicroSD Card	<b>Format</b>	

Nuclias

System

Settings

REST API

REST API is a software interface that allows two applications to communicate with each other over the Internet and through devices. Enable it to allow Nuclias Connect communicate with third-party application through REST API.

REST API

Please note that the network without network ID cannot be accessed by REST API.

REST API

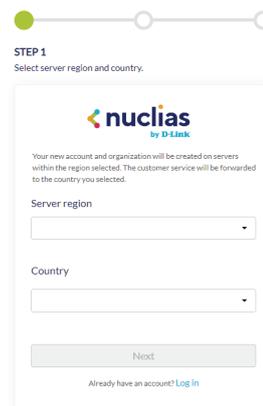

The **Single-Sign-On** tab allows you to use a Nuclias Account to access Nuclias Cloud and the Nuclias Connect portal.

If you do not already have a Nuclias account, you can click **Create account**, in which a separate window will open to allow you to create one.

There are three steps in the registration process.

Step 1: Select server region and country.

The account is created on the servers within the selected region and the selected country. Your account data will be stored in the regional server based on your selected region and country.

STEP 1  
Select server region and country.

**nuclias**  
by D-Link

Your new account and organization will be created on servers within the region selected. The customer service will be forwarded to the country you selected.

Server region

Country

Next

Already have an account? [Log In](#)

Step 2: Create organization and site.

Once the region and country have been entered, you now have to enter your Email, Name, Password, Organization name, and address. Enter the required information and agree to the Terms of Use and Privacy agreement to enable the account creation button.

Click **Create Account** to continue.

STEP 2  
Create your user, organization and site.

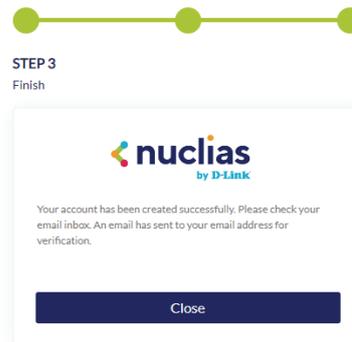

**nuclias**  
by D-Link

I have read and agree to the [Terms of use](#) and [Privacy](#)

Create account

Step 3: Finish the registration.

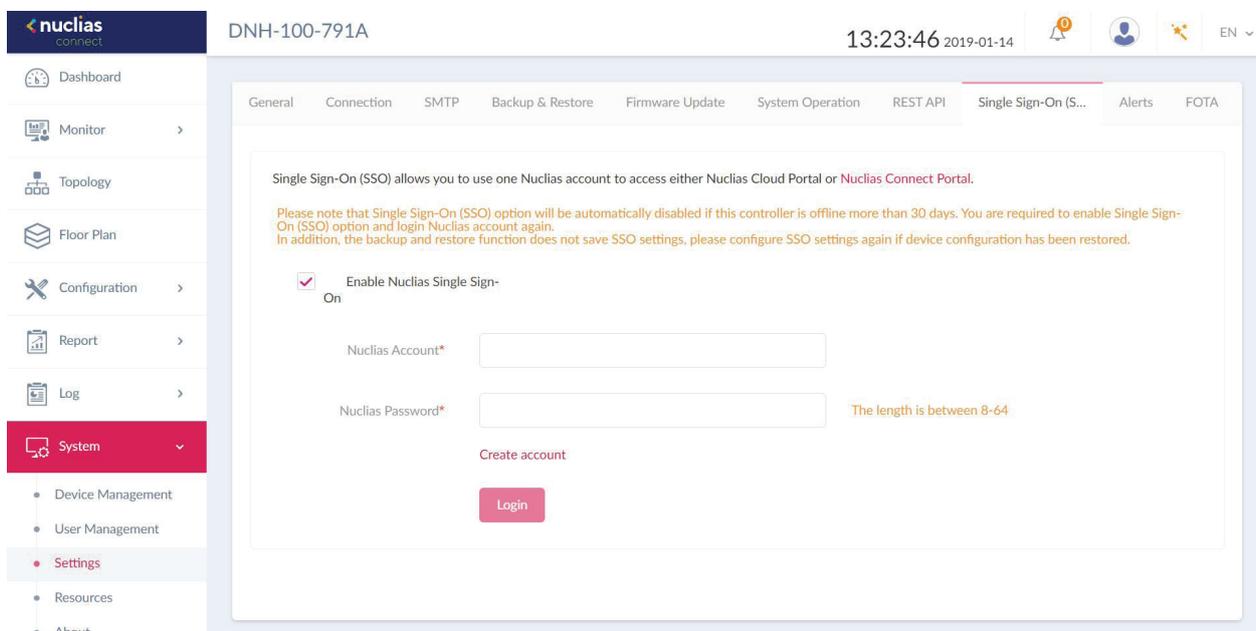

Click **Close** to complete the process. The registered account is now available for use. The verification information will be delivered to the registered email of the account.

Your Nuclias account must be validated before use. You will receive an email from verify@nuclias.com with a verification link included. Please click on the verification link to activate your Nuclias account.

Once finished, specify the following parameters on the Single-Sign-On page and then click **Apply**.

Parameter	Description
<b>Enable Single Sign-On</b>	Check to enable single sign-on.
<b>Nuclias Account</b>	Enter your Nuclias Account username.
<b>Nuclias Password</b>	Enter your Nuclias Account password.

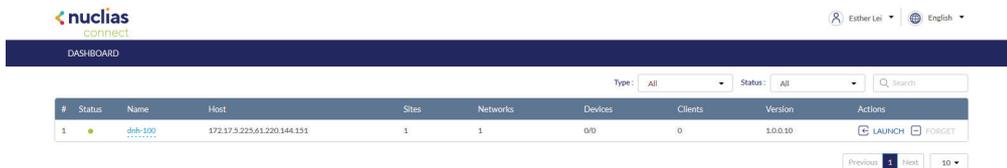

The Nuclias Connect Portal provides you with a easy way to view and connect to all your Nuclias Connect hubs.

Requirements for use include:

- A Nuclias account
- DNH-100 device(s) with single sign-on enabled

The portal can be found at: <https://connect.nuclias.com/>

The Portal provides the following information:

Parameter	Description
<b>Number</b>	Number of the DNH-100 on the list.
<b>Status</b>	Displays whether or not the Nuclias Connect portal can link to that DNH-100.
<b>Name</b>	Name of the Nuclias Connect Hub. You can change this name by clicking on it then typing on the available text box.
<b>Host</b>	Displays both the device IP address and its public IP address.
<b>Sites</b>	Number of sites managed by that DNH-100.
<b>Networks</b>	Number of networks managed by that DNH-100.
<b>Devices</b>	Number of devices managed by that DNH-100.
<b>Clients</b>	Number of clients connected to devices managed by that DNH-100.
<b>Version</b>	Firmware version number of that DNH-100.
<b>Actions</b>	Click <b>Launch</b> to open the DNH-100 Nuclias Connect interface. Please note that IP mapping is required for instances behind a firewall or router. Click <b>Forget</b> to unlink this DNH-100 from the Nuclias Connect portal. ( <b>Forget</b> is only available when that device is offline.)

The Alerts tab allows you to configure the alert event types. Check the types of events that you'd like to generate an alert. To view generated alerts, go to **Log > Alerts** to view alerts.

Check the Email box to receive Email notification of specific events. Go to **System>Settings>User Management** to edit the user and select "Receive Email Alert" to allow user to receive alert email from Nuclias Connect. Click **Save** to save the values and update the screen.

Nuclias Connect System Settings **FOTA**

The FOTA (Firmware Over-The-Air) feature enables users to wireless upgrade to the latest firmware. Click the box to enable automatic firmware check. Once Auto Check is enabled, you can then set a check interval between 1-720 hours.

Note that when Auto Check is enabled, the Alert and Email settings will also be enabled.

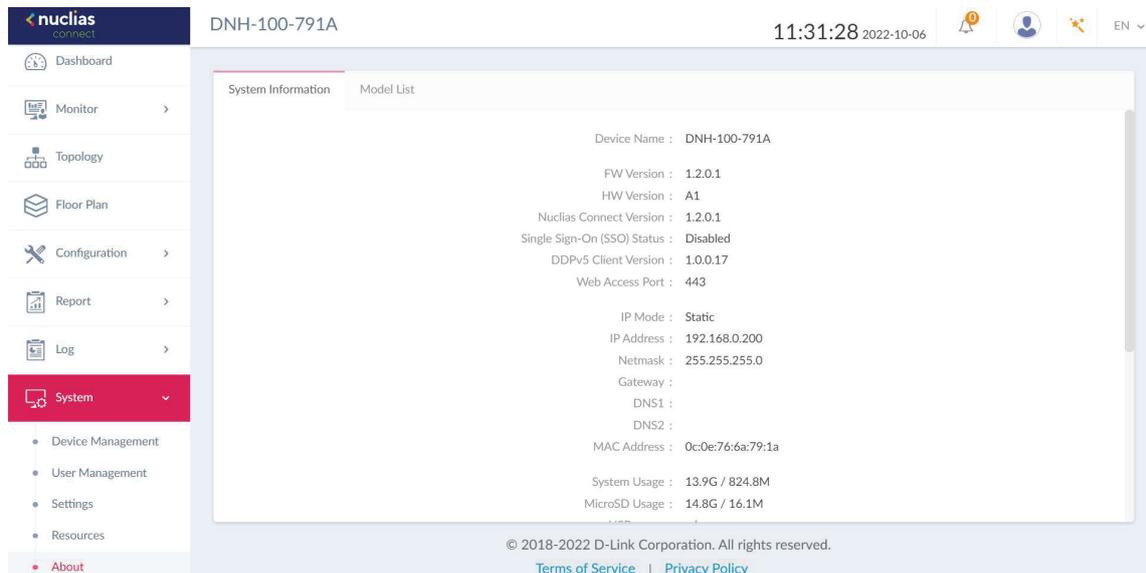

The Resource page allows you to browse the online documents for quick setup, implementation guidelines, and troubleshooting tips.

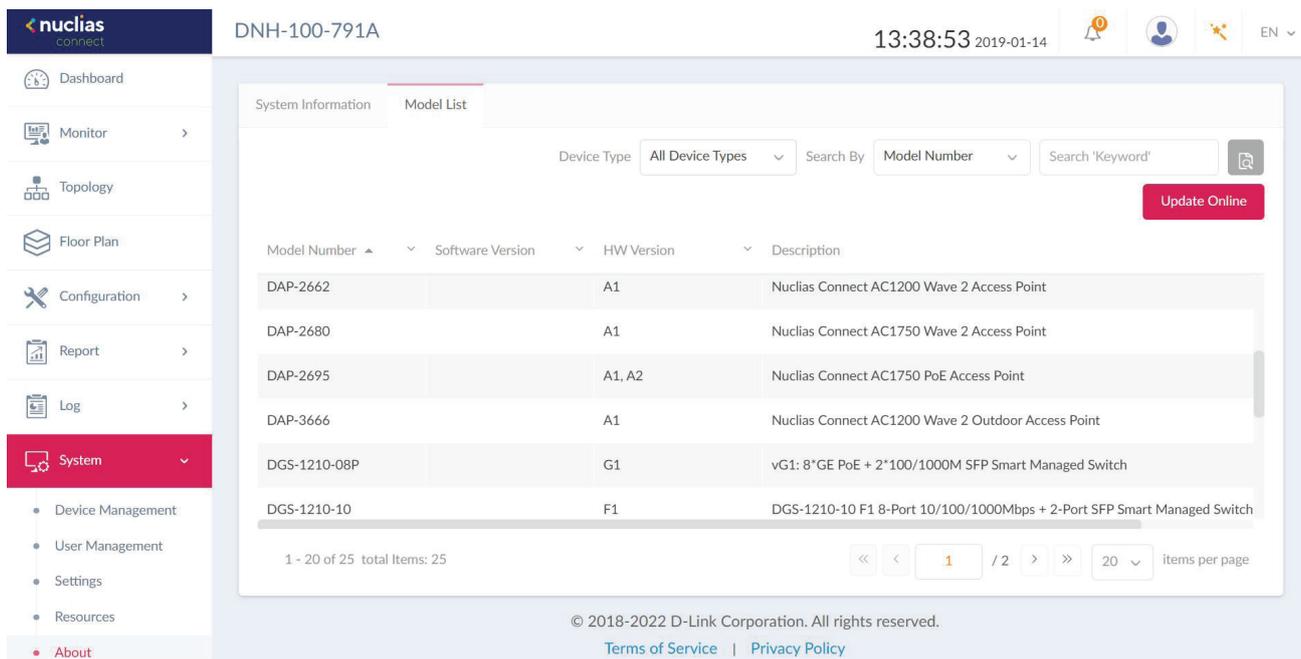

Nuclias System About

The About page displays system information about DNH-100 and a list of supported models.

Navigate to **System > About** to view the info. By default, you will see the System Information tab where information about DNH-100 will be presented.

The Model list can be updated by clicking **Update Online**. If an update is available, new supported devices will be displayed.

# Appendix

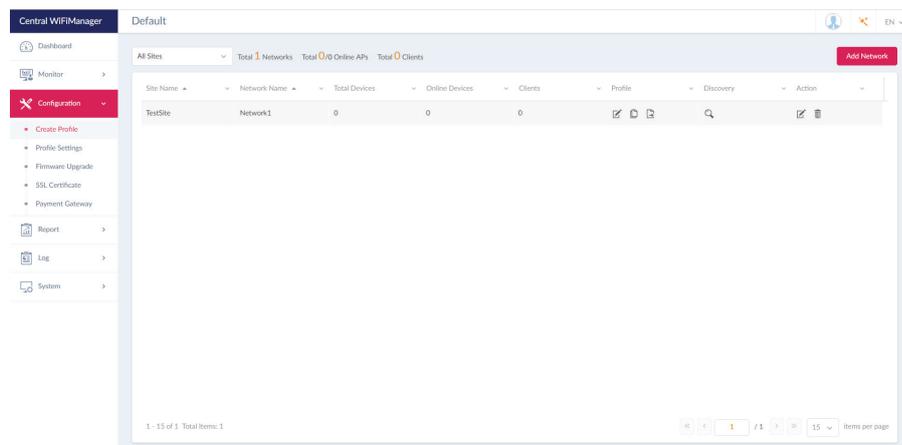

## Nuclias Connect App

Through the use of the Nuclias Connect App, users can manage sites and network remotely and easily by accessing the tool through a smart device.

This section provides information on exporting the required network profiles from the Nuclias server for managing connected DAPs. Additional information explaining the functionality of the Nuclias Connect App is also included.

### Export Network Profiles

To add new access points to Nuclias Connect, you must first export the required network profile from Nuclias. The network profile contains the authentication key and the IP address of the controller. Select **Configuration** and then click the **Export** (📄) icon to export the network profile to your computer.

When access points are located on a public network and you are accessing Nuclias Connect remotely, you must ensure that Nuclias Connect uses a public IP address or domain name. To verify Nuclias Connect's IP address, go to **System > Settings > Connection** and check the **Device Access Address** field.

The screenshot shows the 'Connection Setting' form. It contains the following fields and values:

- Device Access Address:** 192.168.1.61
- Device Access Port:** 8443
- Web Access Address:** other
- Web Access Port:** 30001

There is a 'Save' button at the bottom of the form. A note at the top states: 'CWM Core server needs to be restarted if Device Access Address or Port has been changed.' Another note below the Web Access Address field states: 'CWM Web server needs to be restarted if Web Access Address or Port has been changed.'

# Nuclias Connect App

## Discover and Configure APs Using the Nuclias Connect App

The Nuclias Connect App is a wireless access management tool that provides the means to easily manage single or multiple sites and networks from your smartphone or tablet. With the Nuclias Connect App, you can quickly deploy standalone DAPs to the Nuclias Connect, scan a network for D-Link access points or configure individual DAPs.

**NOTE:**

- Before attempting to import a network profile, ensure that you have access to the Nuclias Connect controller.

The Nuclias Connect App is available for both iOS and Android smart devices. The following functions are available:

- Quick Setup: Quickly and easily deploy your standalone DAP to the Nuclias Connect controller.
- Nuclias Connect: Manage your current sites and networks through Nuclias Connect.
- Standalone Access Point: You can change the configuration of individual DAPs and save the configuration profile to be deployed to multiple DAPs.

### Quick Setup

After opening the Nuclias Connect App, the following window will appear (iOS). Tap on Quick Setup to start the setup process.

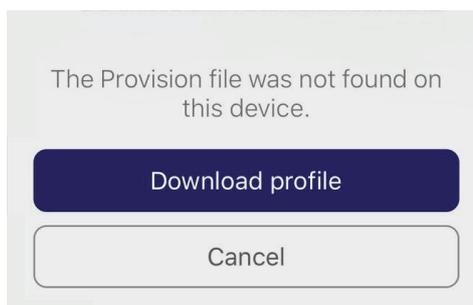

The next step is to select an AP provision profile. The profile is used to push to the selected DAPs. Tap **Quick Setup** to begin the deployment of a standalone DAP to the Nuclias Connect server.

In the below example the Provision File entry shown is **None**.

Tap **Provision File** to display a list of available local profiles. If no locally stored profile exists, a pop-up page will appear with further instructions on how to download a profile.

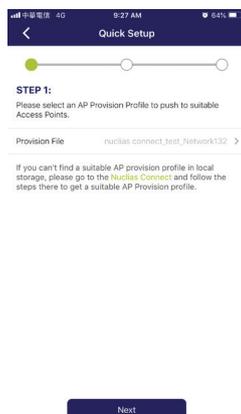

Tap **Download profile** in order to specify a connection to the Nuclias Connect controller.

# Nuclias Connect App

Once a Nuclias Connect controller connection is established, you will see it listed next to the field Provision File.

Tap **Provision File** to select a local AP provision profile. In the following figure, the entry **Nuclias\_connect\_test\_Network132** is available.

After the Select AP Provision file window appears, select an available provision file from local storage and tap **Done** to continue.

The process will continue and the App will return to the previous screen. From the Step 1 page, tap **Next** to continue.

From this page, you can discover standalone APs connected to the L2/L3 wireless network.

Tap the button on the L2 field to enable discovery on the L2 network.

Tap the button on the L3 field to enable discovery on the L3 network. Then enter an IP range in the provided From and To fields. Tap add (+) to create a new IP range entry. Tap remove (-) to delete any defined range entries.

In the IP range fields, specify the starting and ending IP addresses.. Once the range is defined, tap **Next** to initiate the discovery process.

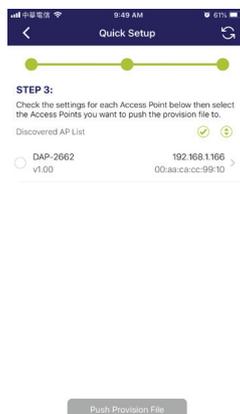

# Nuclias Connect App

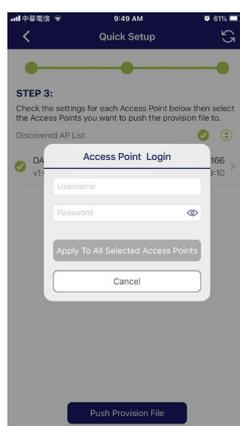

After the scanning the network range, the Step 3 page will list any detected access points.

Tap the radio button next to the AP to select it. The local provision file that you previously selected will be pushed to the selected AP.

Tap **Push Provision File** to continue.

The AP login pop-up window displays. The listed IP and MAC address are shown at the top of the window. Confirm the selection and enter the user name and password with authorization to access the selected AP.

Tap **Apply** to continue the login process. The Modify IP Information page will appear. Any listed information can be modified; see the following figure for further information.

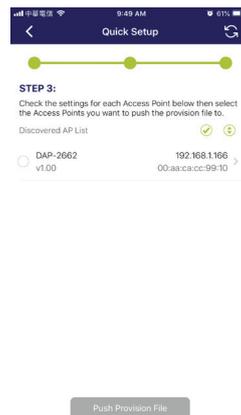

Parameter	Description
<b>Cancel</b>	Tap to discard any changes and continue the process.
<b>Done</b>	Tap to accept any changes and continue the process.
<b>Model Name</b>	Displays the model name for the listed DAP device.
<b>MAC</b>	Displays the MAC address of the listed DAP device.

## Nuclias Connect App

Parameter	Description
<b>DHCP Mode</b>	Tap to enable or disable the DHCP mode function. When enabled, the DAP establishes dynamic IP address settings with any authorized client connections.
<b>IP Address</b>	Tap to designate an IP gateway setting.
<b>Subnet Mask</b>	Tap to designate a subnet mask.
<b>Default Gateway</b>	Tap to designate a default gateway setting.
<b>DNS</b>	Tap to designate a DNS setting.

Tap **Done** or **Cancel** to continue the process. The provision file will be pushed to the selected DAP device (s). The App will return to the Step 3 page and will display the status of the Push function. The discovered DAPs lists the state of the push function with either a successful or failed state. See the following figure for further details.

Tap **Finish** to complete the process. In the event of a failed process, tap **Push Provision File** to attempt the function a second time.

# Nuclias Connect App

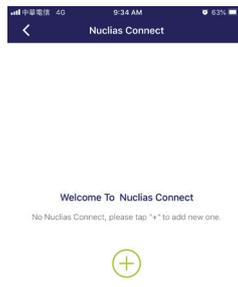

## Nuclias Connect

Nuclias Connect is a wireless access point management tool capable of managing your sites and networks.

Tap **Nuclias Connect** to connect to a Nuclias Connect server.

If no previous Nuclias Connect controller was paired it will ask you to create a new Nuclias Connect pairing. Tap the add (+) button to start the process.

The following page lists the information required to log in to a designated Nuclias Connect controller. Enter the required information in each field.

Parameter	Description
<b>Specify NucliasConnect URL/IP Address</b>	Enter the secure URL/IP address of the Nuclias Connect server to pair with the App.
<b>Specify a reference name</b>	Enter a specific name to easily identify the paired Nuclias Connect server.

## Nuclias Connect App

Parameter	Description
<b>User name</b>	Enter a user name with the authority to access the Nuclias Connect controller.
<b>Password</b>	Enter the password for the referenced user name with the authority to access the Nuclias Connect server.
<b>Login</b>	Tap Login to initiate the login process.

Tap on **Login** to initiate the login process.

After a successful login, the pairing will be added to the listing and will be available for future login selection.

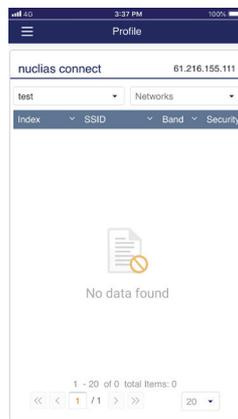

Tap on a **Nuclias Connect** server from the list.

## Nuclias Connect App

The username page will appear. Enter the username and password with authority to access the selected Nuclias Connect server. Tap **Login** to initiate the login process.

After the login process is authenticated, the dashboard will appear. The Nuclias Connect dashboard will list any currently defined sites, networks, access points, and clients.

The Nuclias Connect App is now paired to the Nuclias Connect server. Through the use of the App, profiles can be downloaded to the local device, after which it can be pushed to supported access points.

# Nuclias Connect App

## Standalone Access Point

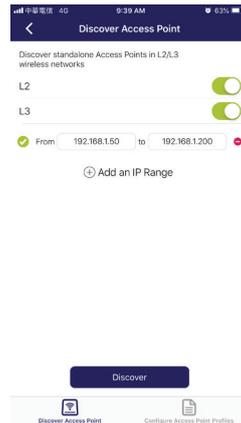

### Discover APs

The Discover AP function allows you to discover any access points in a L2/L3 wireless network.

From this page, you can discover standalone APs connected to the L2/L3 wireless network.

Tap to enable discovery on the L2 network.

Tap to enable discovery on the L2 network. Then enter an IP range in the provided From and To fields. Tap add (+) to create a new IP range entry. Tap remove (-) to delete any defined range entries.

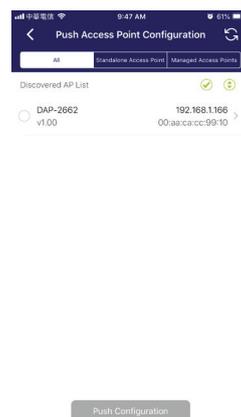

Once the range is defined, tap **Next** to initiate the discovery process.

Alternatively, tap **Configure Access Point Profiles** from the bottom of the page to add or delete any local profiles. See Configure Access Point Profiles.

After the scanning the network range, the Step 3 page will list any detected access points.

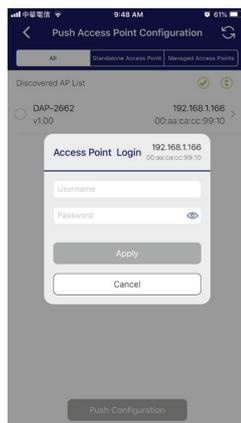

Tap the radio button next to the AP to select it. The selected local provision file will be pushed to the selected AP.

Tap **Push Provision File** to continue.

# Nuclias Connect App

The DAP login pop-up window will appear. The IP and MAC address are shown at the top of the window. Confirm the selection and enter the user name and password with authorization to access the selected AP. Tap **Apply** to continue.

Once a successful login is established, the AP interface menu will appear. The IP information, Wireless, and Client menus will be listed as follows.

Parameter	Description
<b>Cancel</b>	Tap to discard any changes and continue the process.
<b>Model Name</b>	Displays the model name for the listed DAP device.
<b>MAC</b>	Displays the MAC address of the listed DAP device.
<b>DHCP Mode</b>	Tap to enable or disable the DHCP mode function. When enabled, the DAP establishes dynamic IP address settings with any authorized client connections.
<b>IP Address</b>	Tap to designate an IP gateway setting.
<b>Subnet Mask</b>	Tap to designate a subnet mask.
<b>Default Gateway</b>	Tap to designate a default gateway setting.
<b>DNS</b>	Tap to designate a DNS setting.

# Nuclias Connect App

The Wireless settings menu is listed in the following figure.

Parameter	Description
<b>Cancel</b>	Tap to discard any changes and continue the process.
<b>DAP</b>	Displays the model name and IP address of the AP device.
<b>2.4G SSID</b>	
<b>SSID-#</b>	Tap the slide button to enable or disable the SSID. The # character indicates the identifying number of the SSID.
<b>SSID Name</b>	Tap to change the current name of the SSID.
<b>Security</b>	Tap to select a specific security protocol: Open System (default), WPA-Personal, or WPA-Enterprise.
<b>5G SSID</b>	
<b>SSID-#</b>	Tap the slide button to enable or disable the SSID. The # character indicates the identifying number of the SSID.
<b>SSID Name</b>	Tap to change the current name of the SSID.
<b>Security</b>	Tap to select a specific security protocol: Open System (default), WPA-Personal, or WPA-Enterprise.
<b>Wireless Information</b>	
<b>Radio Band</b>	Tap to select a specific radio band: Off, 2.4G, 5G, or 2.4G / 5G.
<b>Radio 2.4G Mode</b>	Tap to select a specific 2.4G radio mode: Mixed 802.11n, 802.11g and 802.11b; Mixed 802.11g, 802.11b; 802.11n Only.
<b>Radio 5G Mode</b>	Tap to select a specific 5G radio mode: Mixed 802.11n, 802.11a; 802.11a Only; 802.11n; Mixed 802.11ac.
<b>Country Code</b>	Displays the assigned country designation for the AP.
