Subject	How does DWL-3200AP scan wireless SSID in WDS mode?
Type	Configuration procedure
Category	Wireless
Model	DWL-3200AP
Problem Description	Please let me know what is the usage of the "Scan" button on the DWL-3200AP. It seems like can't detect anything.
Solution	Since the device is not in the WDS(WDS with AP) mode, the Scan button is not functional, once you click "Save and Active" of configuration, and the device restarted, the device will be real into the setting mode which you expect. procedure, 1. choice the wireless mode of WDS or WDS with AP 2. enter a any legal MAC address into the "Remote AP MAC Address" 3. click the Apply and Save and Active of configuration, wait for device restart 4. click the Scan button of Site Survey, you will be able to find out the wireless signal with WDS 2011-11-14_113527(1114141333).jpg
